

Beacon Office 2.4.3.0114 Release Notes

Bug Fixes

- Fixed an un-descriptive error message that appears in Call Notes if the user is not associated with a phone.
- Fixed a problem that caused Personal Queue to have trouble communicating with the server in some instances.
- Fixed an issue with the re-install, reverse-sync process that caused the Administrator user to be removed.

Additional Features

- Added authentication pages for both IIS and Apache web servers.
