

Release Notes for the Ultra Cloud Core Subscriber Management Infrastructure Version 2020.02.2.33

First Published: July 16, 2021

Last Updated: October 7, 2021

Introduction

These Release Notes identify changes and issues related to this software release.

Release Package Version Information

Software Packages	Version
base.20210416.iso.SPA.tgz	20210416
cee.2020.02.2.33.SPA.tgz	2020.02.2.33
cluster-deployer-2020.02.2.33.SPA.tgz	2020.02.2.33

Descriptions for the various packages provided with this release are provided in the [Release Package Descriptions](#) section.

Feature and Behavior Changes

Refer to the [Release Change Reference](#) for a complete list of feature and behavior changes associated with this software release.

Related Documentation

For a complete list of documentation available for this release, go to:

<https://www.cisco.com/c/en/us/support/wireless/ultra-cloud-core-subscriber-microservices-infrastructure/tsd-products-support-series-home.html>

Enhancements

K8s Version Upgrade to 1.21.0

With release 2020.02.2.33, the Kubernetes is upgraded from 1.20.0 to 1.21.0.

Installation and Upgrade Notes

This Release Note does not contain general installation and upgrade instructions. Refer to the existing installation documentation for specific installation and upgrade considerations.

Software Integrity Verification

To verify the integrity of the software image you have from Cisco, you can validate the SHA512 checksum information against the checksum identified by Cisco for the software.

Image checksum information is available through **Cisco.com Software Download Details**. To find the checksum, hover the mouse pointer over the software image you have downloaded.

The screenshot shows a 'Details' popup window on the left and a table of software packages on the right. The popup contains the following information:

- Description : SMI Application-level POD OpenStack VM image signature package
- Release : 3099.01.0
- Release Date : 29-Jan-2020
- FileName : base-vm.3099.1.0.qcow2.SPA.tgz
- Size : 438.66 MB (459968597 bytes)
- MD5 Checksum : d03d88259248a1a4aff7272ec4897dd

The table on the right is titled 'Related Links and Documentation' and contains the following data:

	Release Date	Size	
SMI Application-level POD OpenStack VM image signature package base-vm.3099.1.0.qcow2.SPA.tgz	29-Jan-2020	438.66 MB	↓
SMI Application-level POD VMware VM image signature package base-vm.3099.1.0.vmdk.SPA.tgz	29-Jan-2020	452.56 MB	↓
SMI Common Execution Environment offline signature package cee.3099.1.0.SPA.tgz	29-Jan-2020	2143.11 MB	↓
SMI Deployer OpenStack VM image signature package cluster-deployer-airgap.3099.1.0.qcow2.SPA.tgz	29-Jan-2020	3047.16 MB	↓
SMI Deployer VMware VM image signature package cluster-deployer-airgap.3099.1.0.vmdk.SPA.tgz	29-Jan-2020	3082.87 MB	↓

At the bottom you find the SHA512 checksum, if you do not see the whole checksum you can expand it by pressing the "..." at the end.

To validate the information, calculate a SHA512 checksum using the information in [Table 1](#) and verify that it matches either the one provided on the software download page.

To calculate a SHA512 checksum on your local desktop please see the table below.

Table 1 – Checksum Calculations per Operating System

Operating System	SHA512 checksum calculation command examples
Microsoft Windows	Open a command line window and type the following command > certutil.exe -hashfile <filename>.<extension> SHA512
Apple MAC	Open a terminal window and type the following command \$ shasum -a 512 <filename>.<extension>
Linux	Open a terminal window and type the following command \$ sha512sum <filename>.<extension> Or \$ shasum -a 512 <filename>.<extension>
<p>NOTES:</p> <p><filename> is the name of the file.</p> <p><extension> is the file extension (e.g. .zip or .tgz).</p>	

If the SHA512 checksum matches, you can be sure that no one has tampered with the software image or the image has not been corrupted during download.

If the SHA512 checksum does not match, we advise you to not attempt upgrading any systems with the corrupted software image. Download the software again and verify the SHA512 checksum again. If there is a constant mismatch, please open a case with the Cisco Technical Assistance Center.

Certificate Validation

SMI software images are signed via x509 certificates. Please view the .README file packaged with the software for information and instructions on how to validate the certificates.

Open Bugs for This Release

None for this release.

NOTE: This software release may contain open bugs first identified in other releases. Additional information for all open bugs for this release are available in the [Cisco Bug Search Tool](#).

Resolved Bugs for This Release

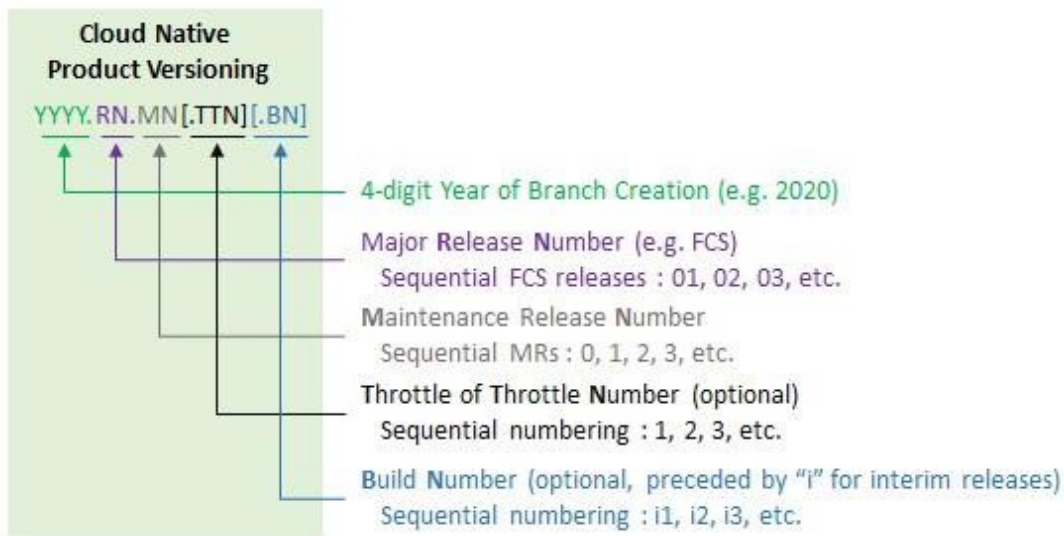

NOTE: This software release may contain open bugs first identified in other releases. Additional information for all open bugs for this release are available in the [Cisco Bug Search Tool](#).

Bug ID	Headline	Behavior Change
CSCvy93395	The cpu-partitioner watch stops working after some time due to k8s client timeout	N

Operator Notes

Cloud Native Product Version Numbering System

The `show helm list` command displays detailed information about the version of the cloud native product currently deployed.

The appropriate version number field increments after a version has been released. The new version numbering format is a contiguous sequential number that represents incremental changes between releases. This format facilitates identifying the changes between releases when using Bug Search Tool to research software releases.

Release Package Descriptions

[Table 2](#) lists descriptions for the packages that are available with this release.

Table 2 - Release Package Information

Software Packages	Description
base.<version>.iso.SPA.tgz	The application-level POD ISO image signature package for use with bare metal deployments. This package contains the base ISO image as well as the release signature, certificate, and verification information.
cee.<version>SPA.tgz	The SMI Common Execution Environment (CEE) offline release signature package. This package contains the CEE deployment package as well as the release signature, certificate, and verification information.
cluster-deployer-<version>.SPA.tgz	The SMI Deployer image signature package for use with bare metal deployments. This package contains the Deployer v image as well as the release signature, certificate, and verification information.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, refer to <https://www.cisco.com/c/en/us/support/index.html>.
