9.2 X.509 Certificate Functions

=====

The following functions are to be used for X.509 certificate handling.
Their prototypes lie in `gnutls/x509.h'.

gnutls_pkcs12_bag_decrypt

-- Function: int gnutls_pkcs12_bag_decrypt (gnutls_pkcs12_bag_t BAG,
const char * PASS)

BAG: The bag

PASS: The password used for encryption, must be ASCII.

This function will decrypt the given encrypted bag and return 0 on success.

Returns: On success, `GNUTLS_E_SUCCESS' (zero) is returned, otherwise an error code is returned.

gnutls_pkcs12_bag_deinit

-- Function: void gnutls_pkcs12_bag_deinit (gnutls_pkcs12_bag_t BAG)

BAG: The structure to be initialized

This function will deinitialize a PKCS12 Bag structure.

gnutls_pkcs12_bag_encrypt

-- Function: int gnutls_pkcs12_bag_encrypt (gnutls_pkcs12_bag_t BAG,
const char * PASS, unsigned int FLAGS)

BAG: The bag

PASS: The password used for encryption, must be ASCII

FLAGS: should be one of `gnutls_pkcs_encrypt_flags_t' elements
bitwise or'd

This function will encrypt the given bag.

Returns: On success, `GNUTLS_E_SUCCESS' (zero) is returned,
otherwise an error code is returned.

gnutls_pkcs12_bag_get_count

-- Function: int gnutls_pkcs12_bag_get_count (gnutls_pkcs12_bag_t BAG)

BAG: The bag

This function will return the number of the elements withing the
bag.

Returns: Number of elements in bag, or an negative error code on
error.

gnutls_pkcs12_bag_get_data

-- Function: int gnutls_pkcs12_bag_get_data (gnutls_pkcs12_bag_t BAG,
int INDX, gnutls_datum_t * DATA)

BAG: The bag

INDX: The element of the bag to get the data from

DATA: where the bag's data will be. Should be treated as constant.

This function will return the bag's data. The data is a constant
that is stored into the bag. Should not be accessed after the bag
is deleted.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.and a negative error code on error.

gnutls_pkcs12_bag_get_friendly_name

-- Function: int gnutls_pkcs12_bag_get_friendly_name

(gnutls_pkcs12_bag_t BAG, int INDX, char ** NAME)

BAG: The bag

INDX: The bag's element to add the id

NAME: will hold a pointer to the name (to be treated as const)

This function will return the friendly name, of the specified bag element. The key ID is usually used to distinguish the local private key and the certificate pair.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value. or a negative value on error.

gnutls_pkcs12_bag_get_key_id

-- Function: int gnutls_pkcs12_bag_get_key_id (gnutls_pkcs12_bag_t BAG, int INDX, gnutls_datum_t * ID)

BAG: The bag

INDX: The bag's element to add the id

ID: where the ID will be copied (to be treated as const)

This function will return the key ID, of the specified bag element. The key ID is usually used to distinguish the local private key and the certificate pair.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value. or a negative value on error.

gnutls_pkcs12_bag_get_type

-- Function: gnutls_pkcs12_bag_type_t gnutls_pkcs12_bag_get_type (gnutls_pkcs12_bag_t BAG, int INDX)

BAG: The bag

INDX: The element of the bag to get the type

This function will return the bag's type.

Returns: One of the `gnutls_pkcs12_bag_type_t` enumerations.

gnutls_pkcs12_bag_init

-- Function: int gnutls_pkcs12_bag_init (gnutls_pkcs12_bag_t * BAG)

BAG: The structure to be initialized

This function will initialize a PKCS12 bag structure. PKCS12 Bags usually contain private keys, lists of X.509 Certificates and X.509 Certificate revocation lists.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_pkcs12_bag_set_crl

-- Function: int gnutls_pkcs12_bag_set_crl (gnutls_pkcs12_bag_t BAG,
gnutls_x509_crl_t CRL)

BAG: The bag

CRL: the CRL to be copied.

This function will insert the given CRL into the bag. This is just a wrapper over `gnutls_pkcs12_bag_set_data()`.

Returns: the index of the added bag on success, or a negative value on failure.

gnutls_pkcs12_bag_set_crt

-- Function: int gnutls_pkcs12_bag_set_crt (gnutls_pkcs12_bag_t BAG,
gnutls_x509_crt_t CRT)

BAG: The bag

CRT: the certificate to be copied.

This function will insert the given certificate into the bag. This is just a wrapper over `gnutls_pkcs12_bag_set_data()`.

Returns: the index of the added bag on success, or a negative value on failure.

gnutls_pkcs12_bag_set_data

-- Function: int gnutls_pkcs12_bag_set_data (gnutls_pkcs12_bag_t BAG,
gnutls_pkcs12_bag_type_t TYPE, const gnutls_datum_t * DATA)

BAG: The bag

TYPE: The data's type

DATA: the data to be copied.

This function will insert the given data of the given type into the bag.

Returns: the index of the added bag on success, or a negative value on error.

gnutls_pkcs12_bag_set_friendly_name

-- Function: int gnutls_pkcs12_bag_set_friendly_name
(gnutls_pkcs12_bag_t BAG, int INDX, const char * NAME)
BAG: The bag

INDX: The bag's element to add the id

NAME: the name

This function will add the given key friendly name, to the specified, by the index, bag element. The name will be encoded as a 'Friendly name' bag attribute, which is usually used to set a user name to the local private key and the certificate pair.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value. or a negative value on error.

gnutls_pkcs12_bag_set_key_id

-- Function: int gnutls_pkcs12_bag_set_key_id (gnutls_pkcs12_bag_t
BAG, int INDX, const gnutls_datum_t * ID)
BAG: The bag

INDX: The bag's element to add the id

ID: the ID

This function will add the given key ID, to the specified, by the index, bag element. The key ID will be encoded as a 'Local key identifier' bag attribute, which is usually used to distinguish the local private key and the certificate pair.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value. or a negative value on error.

gnutls_pkcs12_deinit

-- Function: void gnutls_pkcs12_deinit (gnutls_pkcs12_t PKCS12)
PKCS12: The structure to be initialized

This function will deinitialize a PKCS12 structure.

gnutls_pkcs12_export

-- Function: int gnutls_pkcs12_export (gnutls_pkcs12_t PKCS12,
gnutls_x509_crt_fmt_t FORMAT, void * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)
PKCS12: Holds the pkcs12 structure

FORMAT: the format of output params. One of PEM or DER.

OUTPUT_DATA: will contain a structure PEM or DER encoded

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will export the pkcs12 structure to DER or PEM format.

If the buffer provided is not long enough to hold the output, then *output_data_size will be updated and GNUTLS_E_SHORT_MEMORY_BUFFER will be returned.

If the structure is PEM encoded, it will have a header of "BEGIN PKCS12".

Return value: In case of failure a negative value will be returned, and 0 on success.

gnutls_pkcs12_generate_mac

-- Function: int gnutls_pkcs12_generate_mac (gnutls_pkcs12_t PKCS12,
const char * PASS)
PKCS12: should contain a gnutls_pkcs12_t structure

PASS: The password for the MAC

This function will generate a MAC for the PKCS12 structure.

Returns: On success, 'GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_pkcs12_get_bag

-- Function: int gnutls_pkcs12_get_bag (gnutls_pkcs12_t PKCS12, int
INDX, gnutls_pkcs12_bag_t BAG)

PKCS12: should contain a gnutls_pkcs12_t structure

INDX: contains the index of the bag to extract

BAG: An initialized bag, where the contents of the bag will be
copied

This function will return a Bag from the PKCS12 structure.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

After the last Bag has been read

GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE will be returned.

gnutls_pkcs12_import

-- Function: int gnutls_pkcs12_import (gnutls_pkcs12_t PKCS12, const
gnutls_datum_t * DATA, gnutls_x509_cert_fmt_t FORMAT, unsigned
int FLAGS)

PKCS12: The structure to store the parsed PKCS12.

DATA: The DER or PEM encoded PKCS12.

FORMAT: One of DER or PEM

FLAGS: an ORed sequence of gnutls_privkey_pkcs8_flags

This function will convert the given DER or PEM encoded PKCS12 to
the native gnutls_pkcs12_t format. The output will be stored in
'pkcs12'.

If the PKCS12 is PEM encoded it should have a header of "PKCS12".

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

gnutls_pkcs12_init

-- Function: int gnutls_pkcs12_init (gnutls_pkcs12_t * PKCS12)

PKCS12: The structure to be initialized

This function will initialize a PKCS12 structure. PKCS12 structures usually contain lists of X.509 Certificates and X.509 Certificate revocation lists.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_pkcs12_set_bag

-- Function: int gnutls_pkcs12_set_bag (gnutls_pkcs12_t PKCS12,
gnutls_pkcs12_bag_t BAG)
PKCS12: should contain a gnutls_pkcs12_t structure

BAG: An initialized bag

This function will insert a Bag into the PKCS12 structure.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_pkcs12_verify_mac

-- Function: int gnutls_pkcs12_verify_mac (gnutls_pkcs12_t PKCS12,
const char * PASS)
PKCS12: should contain a gnutls_pkcs12_t structure

PASS: The password for the MAC

This function will verify the MAC for the PKCS12 structure.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_pkcs7_deinit

-- Function: void gnutls_pkcs7_deinit (gnutls_pkcs7_t PKCS7)
PKCS7: The structure to be initialized

This function will deinitialize a PKCS7 structure.

gnutls_pkcs7_delete_crl

-- Function: int gnutls_pkcs7_delete_crl (gnutls_pkcs7_t PKCS7, int
INDX)

PKCS7: should contain a `gnutls_pkcs7_t` structure

INDX: the index of the crl to delete

This function will delete a crl from a PKCS7 or RFC2630 crl set.
Index starts from 0. Returns 0 on success.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

gnutls_pkcs7_delete_crt

-- Function: int gnutls_pkcs7_delete_cert (gnutls_pkcs7_t PKCS7, int
INDX)

PKCS7: should contain a gnutls_pkcs7_t structure

INDX: the index of the certificate to delete

This function will delete a certificate from a PKCS7 or RFC2630
certificate set. Index starts from 0. Returns 0 on success.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

gnutls_pkcs7_export

-- Function: int gnutls_pkcs7_export (gnutls_pkcs7_t PKCS7,
gnutls_x509_crt_fmt_t FORMAT, void * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)

PKCS7: Holds the pkcs7 structure

FORMAT: the format of output params. One of PEM or DER.

OUTPUT_DATA: will contain a structure PEM or DER encoded

OUTPUT_DATA_SIZE: holds the size of output_data (and will be
replaced by the actual size of parameters)

This function will export the pkcs7 structure to DER or PEM format.

If the buffer provided is not long enough to hold the output, then

*`output_data_size` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER`
will be returned.

If the structure is PEM encoded, it will have a header of "BEGIN PKCS7".

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_pkcs7_get_crl_count

-- Function: int gnutls_pkcs7_get_crl_count (gnutls_pkcs7_t PKCS7)
PKCS7: should contain a gnutls_pkcs7_t structure

This function will return the number of certificates in the PKCS7 or RFC2630 crl set.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_pkcs7_get_crl_raw

-- Function: int gnutls_pkcs7_get_crl_raw (gnutls_pkcs7_t PKCS7, int
INDX, void * CRL, size_t * CRL_SIZE)
PKCS7: should contain a `gnutls_pkcs7_t` structure

INDX: contains the index of the crl to extract

CRL: the contents of the crl will be copied there (may be null)

CRL_SIZE: should hold the size of the crl

This function will return a crl of the PKCS7 or RFC2630 crl set.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value. If the provided buffer is not long enough, then `crl_size` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` is returned. After the last crl has been read `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

gnutls_pkcs7_get_crt_count

-- Function: int gnutls_pkcs7_get_crt_count (gnutls_pkcs7_t PKCS7)
PKCS7: should contain a `gnutls_pkcs7_t` structure

This function will return the number of certificates in the PKCS7 or RFC2630 certificate set.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_pkcs7_get_cert_raw

-- Function: int gnutls_pkcs7_get_cert_raw (gnutls_pkcs7_t PKCS7, int
INDX, void * CERTIFICATE, size_t * CERTIFICATE_SIZE)
PKCS7: should contain a gnutls_pkcs7_t structure

INDX: contains the index of the certificate to extract

CERTIFICATE: the contents of the certificate will be copied there
(may be null)

CERTIFICATE_SIZE: should hold the size of the certificate

This function will return a certificate of the PKCS7 or RFC2630
certificate set.

After the last certificate has been read

`GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value. If the provided buffer is not long enough,
then `certificate_size` is updated and
`GNUTLS_E_SHORT_MEMORY_BUFFER` is returned.

gnutls_pkcs7_import

-- Function: int gnutls_pkcs7_import (gnutls_pkcs7_t PKCS7, const
gnutls_datum_t * DATA, gnutls_x509_cert_fmt_t FORMAT)
PKCS7: The structure to store the parsed PKCS7.

DATA: The DER or PEM encoded PKCS7.

FORMAT: One of DER or PEM

This function will convert the given DER or PEM encoded PKCS7 to
the native `gnutls_pkcs7_t` format. The output will be stored in
'pkcs7'.

If the PKCS7 is PEM encoded it should have a header of "PKCS7".

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

gnutls_pkcs7_init

-- Function: int gnutls_pkcs7_init (gnutls_pkcs7_t * PKCS7)
PKCS7: The structure to be initialized

This function will initialize a PKCS7 structure. PKCS7 structures usually contain lists of X.509 Certificates and X.509 Certificate revocation lists.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_pkcs7_set_crl_raw

-- Function: int gnutls_pkcs7_set_crl_raw (gnutls_pkcs7_t PKCS7, const
gnutls_datum_t * CRL)
PKCS7: should contain a `gnutls_pkcs7_t' structure

CRL: the DER encoded crl to be added

This function will add a crl to the PKCS7 or RFC2630 crl set.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_pkcs7_set_crl

-- Function: int gnutls_pkcs7_set_crl (gnutls_pkcs7_t PKCS7,
gnutls_x509_crl_t CRL)
PKCS7: should contain a `gnutls_pkcs7_t' structure

CRL: the DER encoded crl to be added

This function will add a parsed CRL to the PKCS7 or RFC2630 crl set.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_pkcs7_set_cert_raw

-- Function: int gnutls_pkcs7_set_cert_raw (gnutls_pkcs7_t PKCS7, const
gnutls_datum_t * CRT)
PKCS7: should contain a `gnutls_pkcs7_t' structure

CRT: the DER encoded certificate to be added

This function will add a certificate to the PKCS7 or RFC2630 certificate set.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_pkcs7_set_cert

-- Function: int gnutls_pkcs7_set_cert (gnutls_pkcs7_t PKCS7,
gnutls_x509_cert_t CRT)

PKCS7: should contain a `gnutls_pkcs7_t` structure

CRT: the certificate to be copied.

This function will add a parsed certificate to the PKCS7 or RFC2630 certificate set. This is a wrapper function over `gnutls_pkcs7_set_cert_raw()`.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crl_check_issuer

-- Function: int gnutls_x509_crl_check_issuer (gnutls_x509_crl_t CERT,
gnutls_x509_cert_t ISSUER)

ISSUER: is the certificate of a possible issuer

This function will check if the given CRL was issued by the given issuer certificate. It will return true (1) if the given CRL was issued by the given issuer, and false (0) if not.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crl_deinit

-- Function: void gnutls_x509_crl_deinit (gnutls_x509_crl_t CRL)

CRL: The structure to be initialized

This function will deinitialize a CRL structure.

gnutls_x509_crl_export

-- Function: int gnutls_x509_crl_export (gnutls_x509_crl_t CRL,
gnutls_x509_crt_fmt_t FORMAT, void * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)

CRL: Holds the revocation list

FORMAT: the format of output params. One of PEM or DER.

OUTPUT_DATA: will contain a private key PEM or DER encoded

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will export the revocation list to DER or PEM format.

If the buffer provided is not long enough to hold the output, then GNUTLS_E_SHORT_MEMORY_BUFFER will be returned.

If the structure is PEM encoded, it will have a header of "BEGIN X509 CRL".

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value. and a negative value on failure.

gnutls_x509_crl_get_authority_key_id

-- Function: int gnutls_x509_crl_get_authority_key_id
(gnutls_x509_crl_t CRL, void * RET, size_t * RET_SIZE,
unsigned int * CRITICAL)

CRL: should contain a `gnutls_x509_crl_t` structure

RET: The place where the identifier will be copied

RET_SIZE: Holds the size of the result field.

CRITICAL: will be non zero if the extension is marked as critical (may be null)

This function will return the CRL authority's key identifier. This is obtained by the X.509 Authority Key identifier extension field (2.5.29.35). Note that this function only returns the keyIdentifier field of the extension.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error.

Since: 2.8.0

gnutls_x509_crl_get_crt_count

-- Function: int gnutls_x509_crl_get_crt_count (gnutls_x509_crl_t CRL)
CRL: should contain a `gnutls_x509_crl_t' structure

This function will return the number of revoked certificates in the given CRL.

Returns: number of certificates, a negative value on failure.

gnutls_x509_crl_get_crt_serial

-- Function: int gnutls_x509_crl_get_crt_serial (gnutls_x509_crl_t CRL, int INDX, unsigned char * SERIAL, size_t * SERIAL_SIZE, time_t * T)
CRL: should contain a `gnutls_x509_crl_t' structure

INDX: the index of the certificate to extract (starting from 0)

SERIAL: where the serial number will be copied

SERIAL_SIZE: initially holds the size of serial

T: if non null, will hold the time this certificate was revoked

This function will retrieve the serial number of the specified, by the index, revoked certificate.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value. and a negative value on error.

gnutls_x509_crl_get_dn_oid

-- Function: int gnutls_x509_crl_get_dn_oid (gnutls_x509_crl_t CRL, int INDX, void * OID, size_t * SIZEOF_OID)
CRL: should contain a gnutls_x509_crl_t structure

INDX: Specifies which DN OID to send. Use zero to get the first one.

OID: a pointer to a structure to hold the name (may be null)

SIZEOF_OID: initially holds the size of 'oid'

This function will extract the requested OID of the name of the CRL issuer, specified by the given index.

If oid is null then only the size will be filled.

Returns: `GNUTLS_E_SHORT_MEMORY_BUFFER` if the provided buffer is not long enough, and in that case the `sizeof_oid` will be updated with the required size. On success 0 is returned.

`gnutls_x509_crl_get_extension_data`

-- Function: `int gnutls_x509_crl_get_extension_data (gnutls_x509_crl_t CRL, int INDX, void * DATA, size_t * SIZEOF_DATA)`
CRL: should contain a `gnutls_x509_crl_t` structure

INDX: Specifies which extension OID to send. Use zero to get the first one.

DATA: a pointer to a structure to hold the data (may be null)

SIZEOF_DATA: initially holds the size of `oid`

This function will return the requested extension data in the CRL. The extension data will be stored as a string in the provided buffer.

Use `gnutls_x509_crl_get_extension_info()` to extract the OID and critical flag. Use `gnutls_x509_crl_get_extension_by_oid()` instead, if you want to get data indexed by the extension OID rather than sequence.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

Since: 2.8.0

`gnutls_x509_crl_get_extension_info`

-- Function: `int gnutls_x509_crl_get_extension_info (gnutls_x509_crl_t CRL, int INDX, void * OID, size_t * SIZEOF_OID, int * CRITICAL)`
CRL: should contain a `gnutls_x509_crl_t` structure

INDX: Specifies which extension OID to send, use zero to get the first one.

OID: a pointer to a structure to hold the OID

SIZEOF_OID: initially holds the maximum size of `oid`, on return holds actual size of `oid`.

CRITICAL: output variable with critical flag, may be NULL.

This function will return the requested extension OID in the CRL, and the critical flag for it. The extension OID will be stored as a string in the provided buffer. Use `gnutls_x509_crl_get_extension_data()` to extract the data.

If the buffer provided is not long enough to hold the output, then `*sizeof_oid` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

***Since:** 2.8.0

gnutls_x509_crl_get_extension_oid

-- Function: int gnutls_x509_crl_get_extension_oid (gnutls_x509_crl_t CRL, int INDX, void * OID, size_t * SIZEOF_OID)

CRL: should contain a `gnutls_x509_crl_t` structure

INDX: Specifies which extension OID to send, use zero to get the first one.

OID: a pointer to a structure to hold the OID (may be null)

SIZEOF_OID: initially holds the size of `oid`

This function will return the requested extension OID in the CRL. The extension OID will be stored as a string in the provided buffer.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

Since: 2.8.0

gnutls_x509_crl_get_issuer_dn_by_oid

-- Function: int gnutls_x509_crl_get_issuer_dn_by_oid
(gnutls_x509_crl_t CRL, const char * OID, int INDX, unsigned
int RAW_FLAG, void * BUF, size_t * SIZEOF_BUF)
CRL: should contain a gnutls_x509_crl_t structure

OID: holds an Object Identified in null terminated string

INDX: In case multiple same OIDs exist in the RDN, this specifies
which to send. Use zero to get the first one.

RAW_FLAG: If non zero returns the raw DER data of the DN part.

BUF: a pointer to a structure to hold the peer's name (may be null)

SIZEOF_BUF: initially holds the size of `buf`

This function will extract the part of the name of the CRL issuer
specified by the given OID. The output will be encoded as described
in RFC2253. The output string will be ASCII or UTF-8 encoded,
depending on the certificate data.

Some helper macros with popular OIDs can be found in gnutls/x509.h

If raw flag is zero, this function will only return known OIDs as
text. Other OIDs will be DER encoded, as described in RFC2253 - in
hex format with a `#` prefix. You can check about known OIDs
using `gnutls_x509_dn_oid_known()`.

If buf is null then only the size will be filled.

Returns: `GNUTLS_E_SHORT_MEMORY_BUFFER` if the provided buffer is
not long enough, and in that case the sizeof_buf will be updated
with the required size, and 0 on success.

gnutls_x509_crl_get_issuer_dn

-- Function: int gnutls_x509_crl_get_issuer_dn (const
gnutls_x509_crl_t CRL, char * BUF, size_t * SIZEOF_BUF)
CRL: should contain a gnutls_x509_crl_t structure

BUF: a pointer to a structure to hold the peer's name (may be null)

SIZEOF_BUF: initially holds the size of `buf`

This function will copy the name of the CRL issuer in the provided buffer. The name will be in the form "C=xxxx,O=yyyy,CN=zzzz" as described in RFC2253. The output string will be ASCII or UTF-8 encoded, depending on the certificate data.

If buf is `NULL` then only the size will be filled.

Returns: `GNUTLS_E_SHORT_MEMORY_BUFFER` if the provided buffer is not long enough, and in that case the sizeof_buf will be updated with the required size, and 0 on success.

gnutls_x509_crl_get_next_update

-- Function: time_t gnutls_x509_crl_get_next_update (gnutls_x509_crl_t CRL)

CRL: should contain a `gnutls_x509_crl_t` structure

This function will return the time the next CRL will be issued. This field is optional in a CRL so it might be normal to get an error instead.

Returns: when the next CRL will be issued, or (time_t)-1 on error.

gnutls_x509_crl_get_number

-- Function: int gnutls_x509_crl_get_number (gnutls_x509_crl_t CRL, void * RET, size_t * RET_SIZE, unsigned int * CRITICAL)

CRL: should contain a `gnutls_x509_crl_t` structure

RET: The place where the number will be copied

RET_SIZE: Holds the size of the result field.

CRITICAL: will be non zero if the extension is marked as critical (may be null)

This function will return the CRL number extension. This is obtained by the CRL Number extension field (2.5.29.20).

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error.

Since: 2.8.0

gnutls_x509_crl_get_signature_algorithm

-- Function: int gnutls_x509_crl_get_signature_algorithm
(gnutls_x509_crl_t CRL)

CRL: should contain a `gnutls_x509_crl_t' structure

This function will return a value of the `gnutls_sign_algorithm_t'
enumeration that is the signature algorithm.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

gnutls_x509_crl_get_signature

-- Function: int gnutls_x509_crl_get_signature (gnutls_x509_crl_t CRL,
char * SIG, size_t * SIZEOF_SIG)

CRL: should contain a gnutls_x509_crl_t structure

SIG: a pointer where the signature part will be copied (may be
null).

SIZEOF_SIG: initially holds the size of `sig'

This function will extract the signature field of a CRL.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value. and a negative value on error.

gnutls_x509_crl_get_this_update

-- Function: time_t gnutls_x509_crl_get_this_update (gnutls_x509_crl_t
CRL)

CRL: should contain a `gnutls_x509_crl_t' structure

This function will return the time this CRL was issued.

Returns: when the CRL was issued, or (time_t)-1 on error.

gnutls_x509_crl_get_version

-- Function: int gnutls_x509_crl_get_version (gnutls_x509_crl_t CRL)

CRL: should contain a `gnutls_x509_crl_t' structure

This function will return the version of the specified CRL.

Returns: The version number, or a negative value on error.

gnutls_x509_crl_import

-- Function: int gnutls_x509_crl_import (gnutls_x509_crl_t CRL, const
gnutls_datum_t * DATA, gnutls_x509_crt_fmt_t FORMAT)
CRL: The structure to store the parsed CRL.

DATA: The DER or PEM encoded CRL.

FORMAT: One of DER or PEM

This function will convert the given DER or PEM encoded CRL to the
native `gnutls_x509_crl_t` format. The output will be stored in
'crl'.

If the CRL is PEM encoded it should have a header of "X509 CRL".

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

gnutls_x509_crl_init

-- Function: int gnutls_x509_crl_init (gnutls_x509_crl_t * CRL)
CRL: The structure to be initialized

This function will initialize a CRL structure. CRL stands for
Certificate Revocation List. A revocation list usually contains
lists of certificate serial numbers that have been revoked by an
Authority. The revocation lists are always signed with the
authority's private key.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

gnutls_x509_crl_print

-- Function: int gnutls_x509_crl_print (gnutls_x509_crl_t CRL,
gnutls_certificate_print_formats_t FORMAT, gnutls_datum_t *
OUT)

CRL: The structure to be printed

FORMAT: Indicate the format to use

OUT: Newly allocated datum with zero terminated string.

This function will pretty print a X.509 certificate revocation list, suitable for display to a human.

The output `out` needs to be deallocate using `gnutls_free()`.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crl_set_authority_key_id

-- Function: int gnutls_x509_crl_set_authority_key_id
(gnutls_x509_crl_t CRL, const void * ID, size_t ID_SIZE)
CRL: a CRL of type `gnutls_x509_crl_t`

ID: The key ID

ID_SIZE: Holds the size of the serial field.

This function will set the CRL's authority key ID extension. Only the keyIdentifier field can be set with this function.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

Since: 2.8.0

gnutls_x509_crl_set_crt_serial

-- Function: int gnutls_x509_crl_set_crt_serial (gnutls_x509_crl_t
CRL, const void * SERIAL, size_t SERIAL_SIZE, time_t
REVOCATION_TIME)
CRL: should contain a gnutls_x509_crl_t structure

SERIAL: The revoked certificate's serial number

SERIAL_SIZE: Holds the size of the serial field.

REVOCATION_TIME: The time this certificate was revoked

This function will set a revoked certificate's serial number to the CRL.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a

negative error value.

gnutls_x509_crl_set_crt

-- Function: int gnutls_x509_crl_set_crt (gnutls_x509_crl_t CRL,
gnutls_x509_crt_t CRT, time_t REVOCATION_TIME)
CRL: should contain a gnutls_x509_crl_t structure

CRT: a certificate of type `gnutls_x509_crt_t' with the revoked
certificate

REVOCATION_TIME: The time this certificate was revoked

This function will set a revoked certificate's serial number to
the CRL.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

gnutls_x509_crl_set_next_update

-- Function: int gnutls_x509_crl_set_next_update (gnutls_x509_crl_t
CRL, time_t EXP_TIME)
CRL: should contain a gnutls_x509_crl_t structure

EXP_TIME: The actual time

This function will set the time this CRL will be updated.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

gnutls_x509_crl_set_number

-- Function: int gnutls_x509_crl_set_number (gnutls_x509_crl_t CRL,
const void * NR, size_t NR_SIZE)
CRL: a CRL of type `gnutls_x509_crl_t'

NR: The CRL number

NR_SIZE: Holds the size of the nr field.

This function will set the CRL's number extension.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a

negative error value.

Since: 2.8.0

gnutls_x509_crl_set_this_update

-- Function: int gnutls_x509_crl_set_this_update (gnutls_x509_crl_t
CRL, time_t ACT_TIME)

CRL: should contain a gnutls_x509_crl_t structure

ACT_TIME: The actual time

This function will set the time this CRL was issued.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

gnutls_x509_crl_set_version

-- Function: int gnutls_x509_crl_set_version (gnutls_x509_crl_t CRL,
unsigned int VERSION)

CRL: should contain a gnutls_x509_crl_t structure

VERSION: holds the version number. For CRLv1 crls must be 1.

This function will set the version of the CRL. This must be one
for CRL version 1, and so on. The CRLs generated by gnutls should
have a version number of 2.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a
negative error value.

gnutls_x509_crl_sign2

-- Function: int gnutls_x509_crl_sign2 (gnutls_x509_crl_t CRL,
gnutls_x509_crt_t ISSUER, gnutls_x509_privkey_t ISSUER_KEY,
gnutls_digest_algorithm_t DIG, unsigned int FLAGS)

CRL: should contain a gnutls_x509_crl_t structure

ISSUER: is the certificate of the certificate issuer

ISSUER_KEY: holds the issuer's private key

DIG: The message digest to use. GNUTLS_DIG_SHA1 is the safe choice
unless you know what you're doing.

FLAGS: must be 0

This function will sign the CRL with the issuer's private key, and will copy the issuer's information into the CRL.

This must be the last step in a certificate CRL since all the previously set parameters are now signed.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

`gnutls_x509_crl_sign`

-- Function: `int gnutls_x509_crl_sign (gnutls_x509_crl_t CRL, gnutls_x509_crt_t ISSUER, gnutls_x509_privkey_t ISSUER_KEY)`
CRL: should contain a `gnutls_x509_crl_t` structure

ISSUER: is the certificate of the certificate issuer

ISSUER_KEY: holds the issuer's private key

This function is the same as `gnutls_x509_crl_sign2()` with no flags, and SHA1 as the hash algorithm.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

`gnutls_x509_crl_verify`

-- Function: `int gnutls_x509_crl_verify (gnutls_x509_crl_t CRL, const gnutls_x509_crt_t * CA_LIST, int CA_LIST_LENGTH, unsigned int FLAGS, unsigned int * VERIFY)`

CRL: is the crl to be verified

CA_LIST: is a certificate list that is considered to be trusted one

CA_LIST_LENGTH: holds the number of CA certificates in CA_list

FLAGS: Flags that may be used to change the verification algorithm. Use OR of the `gnutls_certificate_verify_flags` enumerations.

VERIFY: will hold the crl verification output.

This function will try to verify the given crl and return its

status. See `gnutls_x509_cert_list_verify()` for a detailed description of return values.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_deinit

-- Function: void gnutls_x509_crq_deinit (gnutls_x509_crq_t CRQ)
CRQ: The structure to be initialized

This function will deinitialize a CRL structure.

gnutls_x509_crq_export

-- Function: int gnutls_x509_crq_export (gnutls_x509_crq_t CRQ,
gnutls_x509_cert_fmt_t FORMAT, void * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)
CRQ: Holds the request

FORMAT: the format of output params. One of PEM or DER.

OUTPUT_DATA: will contain a certificate request PEM or DER encoded

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will export the certificate request to a PKCS10

If the buffer provided is not long enough to hold the output, then GNUTLS_E_SHORT_MEMORY_BUFFER will be returned and *output_data_size will be updated.

If the structure is PEM encoded, it will have a header of "BEGIN NEW CERTIFICATE REQUEST".

***Return value:** In case of failure a negative value will be returned, and 0 on success.

gnutls_x509_crq_get_attribute_by_oid

-- Function: int gnutls_x509_crq_get_attribute_by_oid
(gnutls_x509_crq_t CRQ, const char * OID, int INDX, void *
BUF, size_t * SIZEOF_BUF)
CRQ: should contain a gnutls_x509_crq_t structure

OID: holds an Object Identified in null terminated string

INDX: In case multiple same OIDs exist in the attribute list, this specifies which to send. Use zero to get the first one.

BUF: a pointer to a structure to hold the attribute data (may be null)

SIZEOF_BUF: initially holds the size of `buf`

This function will return the attribute in the certificate request specified by the given Object ID. The attribute will be DER encoded.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_get_attribute_data

-- Function: int gnutls_x509_crq_get_attribute_data (gnutls_x509_crq_t
CERT, int INDX, void * DATA, size_t * SIZEOF_DATA)
CERT: should contain a `gnutls_x509_crq_t` structure

INDX: Specifies which attribute OID to send. Use zero to get the first one.

DATA: a pointer to a structure to hold the data (may be null)

SIZEOF_DATA: initially holds the size of `oid`

This function will return the requested attribute data in the certificate request. The attribute data will be stored as a string in the provided buffer.

Use `gnutls_x509_crq_get_attribute_info()` to extract the OID.
Use `gnutls_x509_crq_get_attribute_by_oid()` instead, if you want to get data indexed by the attribute OID rather than sequence.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

Since: 2.8.0

gnutls_x509_crq_get_attribute_info

-- Function: int gnutls_x509_crq_get_attribute_info (gnutls_x509_crq_t
CERT, int INDX, void * OID, size_t * SIZEOF_OID)
CERT: should contain a `gnutls_x509_crq_t' structure

INDX: Specifies which attribute OID to send. Use zero to get the first one.

OID: a pointer to a structure to hold the OID

SIZEOF_OID: initially holds the maximum size of `oid', on return holds actual size of `oid'.

This function will return the requested attribute OID in the certificate, and the critical flag for it. The attribute OID will be stored as a string in the provided buffer. Use `gnutls_x509_crq_get_attribute_data()' to extract the data.

If the buffer provided is not long enough to hold the output, then `*sizeof_oid' is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER' will be returned.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative value in case of an error. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE' will be returned.

Since: 2.8.0

gnutls_x509_crq_get_basic_constraints

-- Function: int gnutls_x509_crq_get_basic_constraints
(gnutls_x509_crq_t CERT, unsigned int * CRITICAL, int * CA,
int * PATHLEN)
CERT: should contain a `gnutls_x509_crq_t' structure

CRITICAL: will be non zero if the extension is marked as critical

CA: pointer to output integer indicating CA status, may be NULL, value is 1 if the certificate CA flag is set, 0 otherwise.

PATHLEN: pointer to output integer indicating path length (may be NULL), non-negative values indicate a present pathLenConstraint field and the actual value, -1 indicate that the field is absent.

This function will read the certificate's basic constraints, and

return the certificates CA status. It reads the basicConstraints X.509 extension (2.5.29.19).

***Return value:** If the certificate is a CA a positive value will be returned, or zero if the certificate does not have CA flag set. A negative value may be returned in case of errors. If the certificate does not contain the basicConstraints extension `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

***Since:** 2.8.0

gnutls_x509_crq_get_challenge_password

-- Function: int gnutls_x509_crq_get_challenge_password
(gnutls_x509_crq_t CRQ, char * PASS, size_t * SIZEOF_PASS)
CRQ: should contain a gnutls_x509_crq_t structure

PASS: will hold a null terminated password

SIZEOF_PASS: Initially holds the size of `pass`.

This function will return the challenge password in the request.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_get_dn_by_oid

-- Function: int gnutls_x509_crq_get_dn_by_oid (gnutls_x509_crq_t CRQ,
const char * OID, int INDX, unsigned int RAW_FLAG, void *
BUF, size_t * SIZEOF_BUF)
CRQ: should contain a gnutls_x509_crq_t structure

OID: holds an Object Identified in null terminated string

INDX: In case multiple same OIDs exist in the RDN, this specifies which to send. Use zero to get the first one.

RAW_FLAG: If non zero returns the raw DER data of the DN part.

BUF: a pointer to a structure to hold the name (may be null)

SIZEOF_BUF: initially holds the size of `buf`

This function will extract the part of the name of the Certificate request subject, specified by the given OID. The output will be

encoded as described in RFC2253. The output string will be ASCII or UTF-8 encoded, depending on the certificate data.

Some helper macros with popular OIDs can be found in `gnutls/x509.h`. If `raw` flag is zero, this function will only return known OIDs as text. Other OIDs will be DER encoded, as described in RFC2253 - in hex format with a `\#` prefix. You can check about known OIDs using ``gnutls_x509_dn_oid_known()'`.

If ``buf'` is null then only the size will be filled.

***Returns:** `GNUTLS_E_SHORT_MEMORY_BUFFER` if the provided buffer is not long enough, and in that case the `*sizeof_buf` will be updated with the required size. On success 0 is returned.

`gnutls_x509_crq_get_dn_oid`

-- Function: `int gnutls_x509_crq_get_dn_oid (gnutls_x509_crq_t CRQ, int INDX, void * OID, size_t * SIZEOF_OID)`
CRQ: should contain a `gnutls_x509_crq_t` structure

INDX: Specifies which DN OID to send. Use zero to get the first one.

OID: a pointer to a structure to hold the name (may be null)

SIZEOF_OID: initially holds the size of ``oid'`

This function will extract the requested OID of the name of the Certificate request subject, specified by the given index.

If `oid` is null then only the size will be filled.

***Returns:** `GNUTLS_E_SHORT_MEMORY_BUFFER` if the provided buffer is not long enough, and in that case the `*sizeof_oid` will be updated with the required size. On success 0 is returned.

`gnutls_x509_crq_get_dn`

-- Function: `int gnutls_x509_crq_get_dn (gnutls_x509_crq_t CRQ, char * BUF, size_t * SIZEOF_BUF)`
CRQ: should contain a `gnutls_x509_crq_t` structure

BUF: a pointer to a structure to hold the name (may be null)

SIZEOF_BUF: initially holds the size of ``buf'`

This function will copy the name of the Certificate request subject in the provided buffer. The name will be in the form "C=xxxx,O=yyyy,CN=zzzz" as described in RFC2253. The output string will be ASCII or UTF-8 encoded, depending on the certificate data.

If `buf` is null then only the size will be filled.

Returns: GNUTLS_E_SHORT_MEMORY_BUFFER if the provided buffer is not long enough, and in that case the *sizeof_buf* will be updated with the required size. On success 0 is returned.

gnutls_x509_crq_get_extension_by_oid

-- Function: int gnutls_x509_crq_get_extension_by_oid
(gnutls_x509_crq_t CERT, const char * OID, int INDX, void *
BUF, size_t * SIZEOF_BUF, unsigned int * CRITICAL)
CERT: should contain a `gnutls_x509_crq_t` structure

OID: holds an Object Identified in null terminated string

INDX: In case multiple same OIDs exist in the extensions, this specifies which to send. Use zero to get the first one.

BUF: a pointer to a structure to hold the name (may be null)

SIZEOF_BUF: initially holds the size of `buf`

CRITICAL: will be non zero if the extension is marked as critical

This function will return the extension specified by the OID in the certificate. The extensions will be returned as binary data DER encoded, in the provided buffer.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error. If the certificate does not contain the specified extension `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

Since: 2.8.0

gnutls_x509_crq_get_extension_data

-- Function: int gnutls_x509_crq_get_extension_data (gnutls_x509_crq_t
CERT, int INDX, void * DATA, size_t * SIZEOF_DATA)
CERT: should contain a `gnutls_x509_crq_t` structure

INDX: Specifies which extension OID to send. Use zero to get the first one.

DATA: a pointer to a structure to hold the data (may be null)

SIZEOF_DATA: initially holds the size of `oid`

This function will return the requested extension data in the certificate. The extension data will be stored as a string in the provided buffer.

Use `gnutls_x509_crq_get_extension_info()` to extract the OID and critical flag. Use `gnutls_x509_crq_get_extension_by_oid()` instead, if you want to get data indexed by the extension OID rather than sequence.

**Returns:* On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

**Since:* 2.8.0

gnutls_x509_crq_get_extension_info

-- Function: int gnutls_x509_crq_get_extension_info (gnutls_x509_crq_t
CERT, int INDX, void * OID, size_t * SIZEOF_OID, int *
CRITICAL)
CERT: should contain a `gnutls_x509_crq_t` structure

INDX: Specifies which extension OID to send. Use zero to get the first one.

OID: a pointer to a structure to hold the OID

SIZEOF_OID: initially holds the maximum size of `oid`, on return holds actual size of `oid`.

CRITICAL: output variable with critical flag, may be NULL.

This function will return the requested extension OID in the certificate, and the critical flag for it. The extension OID will be stored as a string in the provided buffer. Use `gnutls_x509_crq_get_extension_data()` to extract the data.

If the buffer provided is not long enough to hold the output, then

*`sizeof_oid` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative value in case of an error. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

Since: 2.8.0

gnutls_x509_crq_get_key_id

-- Function: int gnutls_x509_crq_get_key_id (gnutls_x509_crq_t CRQ,
unsigned int FLAGS, unsigned char * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)

CRQ: Holds the certificate signing request

FLAGS: should be 0 for now

OUTPUT_DATA: will contain the key ID

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will return a unique ID that depends on the public key parameters. This ID can be used in checking whether a certificate corresponds to the given private key.

If the buffer provided is not long enough to hold the output, then *output_data_size is updated and GNUTLS_E_SHORT_MEMORY_BUFFER will be returned. The output will normally be a SHA-1 hash output, which is 20 bytes.

Return value: In case of failure a negative value will be returned, and 0 on success.

Since: 2.8.0

gnutls_x509_crq_get_key_purpose_oid

-- Function: int gnutls_x509_crq_get_key_purpose_oid
(gnutls_x509_crq_t CERT, int INDX, void * OID, size_t *
SIZEOF_OID, unsigned int * CRITICAL)

CERT: should contain a `gnutls_x509_crq_t` structure

INDX: This specifies which OID to return. Use zero to get the

first one.

OID: a pointer to a buffer to hold the OID (may be null)

SIZEOF_OID: initially holds the size of `oid`

CRITICAL: output variable with critical flag, may be NULL.

This function will extract the key purpose OIDs of the Certificate specified by the given index. These are stored in the Extended Key Usage extension (2.5.29.37). See the GNUTLS_KP_* definitions for human readable names.

If `oid` is null then only the size will be filled.

Returns: `GNUTLS_E_SHORT_MEMORY_BUFFER` if the provided buffer is not long enough, and in that case the *sizeof_oid will be updated with the required size. On success 0 is returned.

Since: 2.8.0

gnutls_x509_crq_get_key_rsa_raw

-- Function: int gnutls_x509_crq_get_key_rsa_raw (gnutls_x509_crq_t
CRQ, gnutls_datum_t * M, gnutls_datum_t * E)
CRQ: Holds the certificate

M: will hold the modulus

E: will hold the public exponent

This function will export the RSA public key's parameters found in the given structure. The new parameters will be allocated using `gnutls_malloc()` and will be stored in the appropriate datum.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

Since: 2.8.0

gnutls_x509_crq_get_key_usage

-- Function: int gnutls_x509_crq_get_key_usage (gnutls_x509_crq_t
CERT, unsigned int * KEY_USAGE, unsigned int * CRITICAL)
CERT: should contain a `gnutls_x509_crq_t` structure

KEY_USAGE: where the key usage bits will be stored

CRITICAL: will be non zero if the extension is marked as critical

This function will return certificate's key usage, by reading the keyUsage X.509 extension (2.5.29.15). The key usage value will

ORed values of the:\`GNUTLS_KEY_DIGITAL_SIGNATURE',
\`GNUTLS_KEY_NON_REPUDIATION', `\`GNUTLS_KEY_KEY_ENCIPHERMENT',
\`GNUTLS_KEY_DATA_ENCIPHERMENT', `\`GNUTLS_KEY_KEY_AGREEMENT',
\`GNUTLS_KEY_KEY_CERT_SIGN', `\`GNUTLS_KEY_CRL_SIGN',
\`GNUTLS_KEY_ENCIPHER_ONLY', `\`GNUTLS_KEY_DECIPHER_ONLY'.

Returns: the certificate key usage, or a negative value in case of parsing error. If the certificate does not contain the keyUsage extension `\`GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE' will be returned.

Since: 2.8.0

gnutls_x509_crq_get_pk_algorithm

-- Function: int gnutls_x509_crq_get_pk_algorithm (gnutls_x509_crq_t
CRQ, unsigned int * BITS)

CRQ: should contain a gnutls_x509_crq_t structure

BITS: if bits is non null it will hold the size of the parameters'
in bits

This function will return the public key algorithm of a PKCS \`10'
certificate request.

If bits is non null, it should have enough size to hold the
parameters size in bits. For RSA the bits returned is the modulus.
For DSA the bits returned are of the public exponent.

Returns: a member of the `gnutls_pk_algorithm_t' enumeration on
success, or a negative value on error.

gnutls_x509_crq_get_subject_alt_name

-- Function: int gnutls_x509_crq_get_subject_alt_name
(gnutls_x509_crq_t CERT, unsigned int SEQ, void * RET, size_t
* RET_SIZE, unsigned int * RET_TYPE, unsigned int * CRITICAL)

CERT: should contain a `gnutls_x509_crq_t' structure

SEQ: specifies the sequence number of the alt name, 0 for the

first one, 1 for the second etc.

RET: is the place where the alternative name will be copied to

RET_SIZE: holds the size of ret.

RET_TYPE: holds the `gnutls_x509_subject_alt_name_t` name type

CRITICAL: will be non zero if the extension is marked as critical (may be null)

This function will return the alternative names, contained in the given certificate. It is the same as `gnutls_x509_crq_get_subject_alt_name()` except for the fact that it will return the type of the alternative name in `ret_type` even if the function fails for some reason (i.e. the buffer provided is not enough).

Returns: the alternative subject name type on success, one of the enumerated `gnutls_x509_subject_alt_name_t`. It will return `GNUTLS_E_SHORT_MEMORY_BUFFER` if `ret_size` is not large enough to hold the value. In that case `ret_size` will be updated with the required size. If the certificate request does not have an Alternative name with the specified sequence number then `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` is returned.

Since: 2.8.0

gnutls_x509_crq_get_subject_alt_othername_oid

-- Function: int gnutls_x509_crq_get_subject_alt_othername_oid
(gnutls_x509_crq_t CERT, unsigned int SEQ, void * RET, size_t
* RET_SIZE)

CERT: should contain a `gnutls_x509_crq_t` structure

SEQ: specifies the sequence number of the alt name (0 for the first one, 1 for the second etc.)

RET: is the place where the otherName OID will be copied to

RET_SIZE: holds the size of ret.

This function will extract the type OID of an otherName Subject Alternative Name, contained in the given certificate, and return the type as an enumerated element.

This function is only useful if

`gnutls_x509_crq_get_subject_alt_name()' returned
'GNUTLS_SAN_OTHERNAME'.

**Returns:* the alternative subject name type on success, one of the enumerated `gnutls_x509_subject_alt_name_t`. For supported OIDs, it will return one of the virtual (`GNUTLS_SAN_OTHERNAME_*`) types, e.g. `'GNUTLS_SAN_OTHERNAME_XMPP'`, and `'GNUTLS_SAN_OTHERNAME'` for unknown OIDs. It will return `'GNUTLS_E_SHORT_MEMORY_BUFFER'` if `'ret_size'` is not large enough to hold the value. In that case `'ret_size'` will be updated with the required size. If the certificate does not have an Alternative name with the specified sequence number and with the `otherName` type then `'GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE'` is returned.

**Since:* 2.8.0

`gnutls_x509_crq_get_version`

-- Function: `int gnutls_x509_crq_get_version (gnutls_x509_crq_t CRQ)`
CRQ: should contain a `gnutls_x509_crq_t` structure

This function will return the version of the specified Certificate request.

**Returns:* version of certificate request, or a negative value on error.

`gnutls_x509_crq_import`

-- Function: `int gnutls_x509_crq_import (gnutls_x509_crq_t CRQ, const gnutls_datum_t * DATA, gnutls_x509 crt_fmt_t FORMAT)`
CRQ: The structure to store the parsed certificate request.

DATA: The DER or PEM encoded certificate.

FORMAT: One of DER or PEM

This function will convert the given DER or PEM encoded Certificate to the native `gnutls_x509_crq_t` format. The output will be stored in `'cert'`.

If the Certificate is PEM encoded it should have a header of "NEW CERTIFICATE REQUEST".

**Returns:* On success, `'GNUTLS_E_SUCCESS'` is returned, otherwise a negative error value.

gnutls_x509_crq_init

-- Function: int gnutls_x509_crq_init (gnutls_x509_crq_t * CRQ)
CRQ: The structure to be initialized

This function will initialize a PKCS10 certificate request structure.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_print

-- Function: int gnutls_x509_crq_print (gnutls_x509_crq_t CRQ,
gnutls_certificate_print_formats_t FORMAT, gnutls_datum_t *
OUT)

CRQ: The structure to be printed

FORMAT: Indicate the format to use

OUT: Newly allocated datum with zero terminated string.

This function will pretty print a certificate request, suitable for display to a human.

The output `out` needs to be deallocate using `gnutls_free()`.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

Since: 2.8.0

gnutls_x509_crq_set_attribute_by_oid

-- Function: int gnutls_x509_crq_set_attribute_by_oid
(gnutls_x509_crq_t CRQ, const char * OID, void * BUF, size_t
SIZEOF_BUF)

CRQ: should contain a gnutls_x509_crq_t structure

OID: holds an Object Identified in null terminated string

BUF: a pointer to a structure that holds the attribute data

SIZEOF_BUF: holds the size of `buf`

This function will set the attribute in the certificate request specified by the given Object ID. The attribute must be DER encoded.

**Returns:* On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_set_basic_constraints

-- Function: int gnutls_x509_crq_set_basic_constraints

(gnutls_x509_crq_t CRQ, unsigned int CA, int
PATHLENCONSTRAINT)

CRQ: a certificate of type `gnutls_x509_crq_t'

CA: true(1) or false(0). Depending on the Certificate authority status.

PATHLENCONSTRAINT: non-negative values indicate maximum length of path, and negative values indicate that the pathLenConstraints field should not be present.

This function will set the basicConstraints certificate extension.

**Returns:* On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

**Since:* 2.8.0

gnutls_x509_crq_set_challenge_password

-- Function: int gnutls_x509_crq_set_challenge_password

(gnutls_x509_crq_t CRQ, const char * PASS)

CRQ: should contain a gnutls_x509_crq_t structure

PASS: holds a null terminated password

This function will set a challenge password to be used when revoking the request.

**Returns:* On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_set_dn_by_oid

-- Function: int gnutls_x509_crq_set_dn_by_oid (gnutls_x509_crq_t CRQ,
const char * OID, unsigned int RAW_FLAG, const void * DATA,
unsigned int SIZEOF_DATA)
CRQ: should contain a gnutls_x509_crq_t structure

OID: holds an Object Identifier in a null terminated string

RAW_FLAG: must be 0, or 1 if the data are DER encoded

DATA: a pointer to the input data

SIZEOF_DATA: holds the size of `data`

This function will set the part of the name of the Certificate request subject, specified by the given OID. The input string should be ASCII or UTF-8 encoded.

Some helper macros with popular OIDs can be found in gnutls/x509.h
With this function you can only set the known OIDs. You can test for known OIDs using `gnutls_x509_dn_oid_known()`. For OIDs that are not known (by gnutls) you should properly DER encode your data, and call this function with raw_flag set.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_set_key_purpose_oid

-- Function: int gnutls_x509_crq_set_key_purpose_oid
(gnutls_x509_crq_t CERT, const void * OID, unsigned int
CRITICAL)
CERT: a certificate of type `gnutls_x509_crq_t`

OID: a pointer to a null terminated string that holds the OID

CRITICAL: Whether this extension will be critical or not

This function will set the key purpose OIDs of the Certificate. These are stored in the Extended Key Usage extension (2.5.29.37) See the GNUTLS_KP_* definitions for human readable names.

Subsequent calls to this function will append OIDs to the OID list.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

Since: 2.8.0

gnutls_x509_crq_set_key_rsa_raw

-- Function: int gnutls_x509_crq_set_key_rsa_raw (gnutls_x509_crq_t
CRQ, const gnutls_datum_t * M, const gnutls_datum_t * E)
CRQ: should contain a `gnutls_x509_crq_t' structure

M: holds the modulus

E: holds the public exponent

This function will set the public parameters from the given private
key to the request. Only RSA keys are currently supported.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

Since: 2.6.0

gnutls_x509_crq_set_key_usage

-- Function: int gnutls_x509_crq_set_key_usage (gnutls_x509_crq_t CRQ,
unsigned int USAGE)
CRQ: a certificate of type `gnutls_x509_crq_t'

USAGE: an ORed sequence of the GNUTLS_KEY_* elements.

This function will set the keyUsage certificate extension.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

Since: 2.8.0

gnutls_x509_crq_set_key

-- Function: int gnutls_x509_crq_set_key (gnutls_x509_crq_t CRQ,
gnutls_x509_privkey_t KEY)
CRQ: should contain a gnutls_x509_crq_t structure

KEY: holds a private key

This function will set the public parameters from the given
private key to the request. Only RSA keys are currently supported.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_set_subject_alt_name

-- Function: int gnutls_x509_crq_set_subject_alt_name
(gnutls_x509_crq_t CRQ, gnutls_x509_subject_alt_name_t NT,
const void * DATA, unsigned int DATA_SIZE, unsigned int FLAGS)
CRQ: a certificate of type `gnutls_x509_crq_t`

NT: is one of the `gnutls_x509_subject_alt_name_t` enumerations

DATA: The data to be set

DATA_SIZE: The size of data to be set

FLAGS: `GNUTLS_FSAN_SET` to clear previous data or
`GNUTLS_FSAN_APPEND` to append.

This function will set the subject alternative name certificate extension. It can set the following types:

&GNUTLS_SAN_DNSNAME: as a text string

&GNUTLS_SAN_RFC822NAME: as a text string

&GNUTLS_SAN_URI: as a text string

&GNUTLS_SAN_IPADDRESS: as a binary IP address (4 or 16 bytes)

Other values can be set as binary values with the proper DER encoding.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

Since: 2.8.0

gnutls_x509_crq_set_version

-- Function: int gnutls_x509_crq_set_version (gnutls_x509_crq_t CRQ,
unsigned int VERSION)
CRQ: should contain a gnutls_x509_crq_t structure

VERSION: holds the version number. For v1 Requests must be 1.

This function will set the version of the certificate request. For version 1 requests this must be one.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_crq_sign2

-- Function: int gnutls_x509_crq_sign2 (gnutls_x509_crq_t CRQ,
gnutls_x509_privkey_t KEY, gnutls_digest_algorithm_t DIG,
unsigned int FLAGS)
CRQ: should contain a `gnutls_x509_crq_t` structure

KEY: holds a private key

DIG: The message digest to use, `GNUTLS_DIG_SHA1` is the safe choice unless you know what you're doing.

FLAGS: must be 0

This function will sign the certificate request with a private key. This must be the same key as the one used in `gnutls_x509 crt_set_key()` since a certificate request is self signed.

This must be the last step in a certificate request generation since all the previously set parameters are now signed.

***Returns:** `GNUTLS_E_SUCCESS` on success, otherwise an error. `GNUTLS_E_ASN1_VALUE_NOT_FOUND` is returned if you didn't set all information in the certificate request (e.g., the version using `gnutls_x509_crq_set_version()`).

gnutls_x509_crq_sign

-- Function: int gnutls_x509_crq_sign (gnutls_x509_crq_t CRQ,
gnutls_x509_privkey_t KEY)
CRQ: should contain a gnutls_x509_crq_t structure

KEY: holds a private key

This function is the same as `gnutls_x509_crq_sign2()` with no flags, and SHA1 as the hash algorithm.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_cert_check_hostname

-- Function: int gnutls_x509_cert_check_hostname (gnutls_x509_cert_t
CERT, const char * HOSTNAME)

CERT: should contain an gnutls_x509_cert_t structure

HOSTNAME: A null terminated string that contains a DNS name

This function will check if the given certificate's subject matches the given hostname. This is a basic implementation of the matching described in RFC2818 (HTTPS), which takes into account wildcards, and the DNSName/IPAddress subject alternative name PKIX extension.

Returns: non zero for a successful match, and zero on failure.

gnutls_x509_cert_check_issuer

-- Function: int gnutls_x509_cert_check_issuer (gnutls_x509_cert_t CERT,
gnutls_x509_cert_t ISSUER)

CERT: is the certificate to be checked

ISSUER: is the certificate of a possible issuer

This function will check if the given certificate was issued by the given issuer.

Returns: It will return true (1) if the given certificate is issued by the given issuer, and false (0) if not. A negative value is returned in case of an error.

gnutls_x509_cert_check_revocation

-- Function: int gnutls_x509_cert_check_revocation (gnutls_x509_cert_t
CERT, const gnutls_x509_crl_t * CRL_LIST, int CRL_LIST_LENGTH)

CERT: should contain a `gnutls_x509_cert_t' structure

CRL_LIST: should contain a list of gnutls_x509_crl_t structures

CRL_LIST_LENGTH: the length of the crl_list

This function will return check if the given certificate is revoked. It is assumed that the CRLs have been verified before.

Returns: 0 if the certificate is NOT revoked, and 1 if it is. A

negative value is returned on error.

gnutls_x509_crt_cpy_crl_dist_points

-- Function: int gnutls_x509_crt_cpy_crl_dist_points
(gnutls_x509_crt_t DST, gnutls_x509_crt_t SRC)
DST: a certificate of type `gnutls_x509_crt_t'

SRC: the certificate where the dist points will be copied from

This function will copy the CRL distribution points certificate extension, from the source to the destination certificate. This may be useful to copy from a CA certificate to issued ones.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_x509_crt_deinit

-- Function: void gnutls_x509_crt_deinit (gnutls_x509_crt_t CERT)
CERT: The structure to be initialized

This function will deinitialize a CRL structure.

gnutls_x509_crt_export

-- Function: int gnutls_x509_crt_export (gnutls_x509_crt_t CERT,
gnutls_x509_crt_fmt_t FORMAT, void * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)
CERT: Holds the certificate

FORMAT: the format of output params. One of PEM or DER.

OUTPUT_DATA: will contain a certificate PEM or DER encoded

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will export the certificate to DER or PEM format.

If the buffer provided is not long enough to hold the output, then *output_data_size is updated and GNUTLS_E_SHORT_MEMORY_BUFFER will be returned.

If the structure is PEM encoded, it will have a header of "BEGIN

CERTIFICATE".

Return value: In case of failure a negative value will be returned, and 0 on success.

gnutls_x509_cert_get_activation_time

-- Function: time_t gnutls_x509_cert_get_activation_time
(gnutls_x509_cert_t CERT)
CERT: should contain a `gnutls_x509_cert_t' structure

This function will return the time this Certificate was or will be activated.

Returns: activation time, or (time_t)-1 on error.

gnutls_x509_cert_get_authority_key_id

-- Function: int gnutls_x509_cert_get_authority_key_id
(gnutls_x509_cert_t CERT, void * RET, size_t * RET_SIZE,
unsigned int * CRITICAL)
CERT: should contain a `gnutls_x509_cert_t' structure

RET: The place where the identifier will be copied

RET_SIZE: Holds the size of the result field.

CRITICAL: will be non zero if the extension is marked as critical
(may be null)

This function will return the X.509v3 certificate authority's key identifier. This is obtained by the X.509 Authority Key identifier extension field (2.5.29.35). Note that this function only returns the keyIdentifier field of the extension.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value and a negative value in case of an error.

gnutls_x509_cert_get_basic_constraints

-- Function: int gnutls_x509_cert_get_basic_constraints
(gnutls_x509_cert_t CERT, unsigned int * CRITICAL, int * CA,
int * PATHLEN)
CERT: should contain a `gnutls_x509_cert_t' structure

CRITICAL: will be non zero if the extension is marked as critical

CA: pointer to output integer indicating CA status, may be NULL, value is 1 if the certificate CA flag is set, 0 otherwise.

PATHLEN: pointer to output integer indicating path length (may be NULL), non-negative values indicate a present pathLenConstraint field and the actual value, -1 indicate that the field is absent.

This function will read the certificate's basic constraints, and return the certificates CA status. It reads the basicConstraints X.509 extension (2.5.29.19).

Return value: If the certificate is a CA a positive value will be returned, or zero if the certificate does not have CA flag set. A negative value may be returned in case of errors. If the certificate does not contain the basicConstraints extension GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE will be returned.

gnutls_x509_cert_get_ca_status

-- Function: int gnutls_x509_cert_get_ca_status (gnutls_x509_cert_t
CERT, unsigned int * CRITICAL)
CERT: should contain a `gnutls_x509_cert_t' structure

CRITICAL: will be non zero if the extension is marked as critical

This function will return certificates CA status, by reading the basicConstraints X.509 extension (2.5.29.19). If the certificate is a CA a positive value will be returned, or zero if the certificate does not have CA flag set.

Use `gnutls_x509_cert_get_basic_constraints()' if you want to read the pathLenConstraint field too.

Returns: A negative value may be returned in case of parsing error. If the certificate does not contain the basicConstraints extension `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE' will be returned.

gnutls_x509_cert_get_crl_dist_points

-- Function: int gnutls_x509_cert_get_crl_dist_points
(gnutls_x509_cert_t CERT, unsigned int SEQ, void * RET, size_t
* RET_SIZE, unsigned int * REASON_FLAGS, unsigned int *
CRITICAL)
CERT: should contain a `gnutls_x509_cert_t' structure

SEQ: specifies the sequence number of the distribution point (0 for the first one, 1 for the second etc.)

RET: is the place where the distribution point will be copied to

RET_SIZE: holds the size of ret.

REASON_FLAGS: Revocation reasons flags.

CRITICAL: will be non zero if the extension is marked as critical (may be null)

This function will return the CRL distribution points (2.5.29.31), contained in the given certificate.

`reason_flags' should be an ORed sequence of GNUTLS_CRL_REASON_UNUSED, GNUTLS_CRL_REASON_KEY_COMPROMISE, GNUTLS_CRL_REASON_CA_COMPROMISE, GNUTLS_CRL_REASON_AFFILIATION_CHANGED, GNUTLS_CRL_REASON_SUPERSEDED, GNUTLS_CRL_REASON_CESSATION_OF_OPERATION, GNUTLS_CRL_REASON_CERTIFICATE_HOLD, GNUTLS_CRL_REASON_PRIVILEGE_WITHDRAWN, GNUTLS_CRL_REASON_AA_COMPROMISE, or zero for all possible reasons.

This is specified in X509v3 Certificate Extensions. GNUTLS will return the distribution point type, or a negative error code on error.

Returns: `GNUTLS_E_SHORT_MEMORY_BUFFER' and updates &`ret_size' if &`ret_size' is not enough to hold the distribution point, or the type of the distribution point if everything was ok. The type is one of the enumerated `gnutls_x509_subject_alt_name_t'. If the certificate does not have an Alternative name with the specified sequence number then `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE' is returned.

gnutls_x509_cert_get_dn_by_oid

-- Function: int gnutls_x509_cert_get_dn_by_oid (gnutls_x509_cert_t CERT, const char * OID, int INDX, unsigned int RAW_FLAG, void * BUF, size_t * SIZEOF_BUF)

CERT: should contain a `gnutls_x509_cert_t' structure

OID: holds an Object Identified in null terminated string

INDX: In case multiple same OIDs exist in the RDN, this specifies which to send. Use zero to get the first one.

RAW_FLAG: If non zero returns the raw DER data of the DN part.

BUF: a pointer where the DN part will be copied (may be null).

SIZEOF_BUF: initially holds the size of `buf`

This function will extract the part of the name of the Certificate subject specified by the given OID. The output, if the raw flag is not used, will be encoded as described in RFC2253. Thus a string that is ASCII or UTF-8 encoded, depending on the certificate data.

Some helper macros with popular OIDs can be found in gnutls/x509.h
If raw flag is zero, this function will only return known OIDs as text. Other OIDs will be DER encoded, as described in RFC2253 - in hex format with a '#' prefix. You can check about known OIDs using `gnutls_x509_dn_oid_known()`.

If `buf` is null then only the size will be filled.

Returns: GNUTLS_E_SHORT_MEMORY_BUFFER if the provided buffer is not long enough, and in that case the *sizeof_buf will be updated with the required size. On success 0 is returned.

gnutls_x509_cert_get_dn_oid

-- Function: int gnutls_x509_cert_get_dn_oid (gnutls_x509_cert_t CERT,
int INDX, void * OID, size_t * SIZEOF_OID)
CERT: should contain a `gnutls_x509_cert_t` structure

INDX: This specifies which OID to return. Use zero to get the first one.

OID: a pointer to a buffer to hold the OID (may be null)

SIZEOF_OID: initially holds the size of `oid`

This function will extract the OIDs of the name of the Certificate subject specified by the given index.

If oid is null then only the size will be filled.

Returns: GNUTLS_E_SHORT_MEMORY_BUFFER if the provided buffer is not long enough, and in that case the *sizeof_oid will be updated with the required size. On success 0 is returned.

gnutls_x509_cert_get_dn

-- Function: int gnutls_x509_cert_get_dn (gnutls_x509_cert_t CERT, char
* BUF, size_t * SIZEOF_BUF)

CERT: should contain a `gnutls_x509_cert_t' structure

BUF: a pointer to a structure to hold the name (may be null)

SIZEOF_BUF: initially holds the size of `buf'

This function will copy the name of the Certificate in the provided buffer. The name will be in the form "C=xxxx,O=yyyy,CN=zzzz" as described in RFC2253. The output string will be ASCII or UTF-8 encoded, depending on the certificate data.

If `buf' is null then only the size will be filled.

Returns: GNUTLS_E_SHORT_MEMORY_BUFFER if the provided buffer is not long enough, and in that case the *sizeof_buf will be updated with the required size. On success 0 is returned.

gnutls_x509_cert_get_expiration_time

-- Function: time_t gnutls_x509_cert_get_expiration_time
(gnutls_x509_cert_t CERT)

CERT: should contain a `gnutls_x509_cert_t' structure

This function will return the time this Certificate was or will be expired.

Returns: expiration time, or (time_t)-1 on error.

gnutls_x509_cert_get_extension_by_oid

-- Function: int gnutls_x509_cert_get_extension_by_oid
(gnutls_x509_cert_t CERT, const char * OID, int INDX, void *
BUF, size_t * SIZEOF_BUF, unsigned int * CRITICAL)

CERT: should contain a `gnutls_x509_cert_t' structure

OID: holds an Object Identified in null terminated string

INDX: In case multiple same OIDs exist in the extensions, this specifies which to send. Use zero to get the first one.

BUF: a pointer to a structure to hold the name (may be null)

SIZEOF_BUF: initially holds the size of `buf`

CRITICAL: will be non zero if the extension is marked as critical

This function will return the extension specified by the OID in the certificate. The extensions will be returned as binary data DER encoded, in the provided buffer.

Returns: On success, `GNUTLS_E_SUCCESS` (zero) is returned, otherwise an error code is returned. If the certificate does not contain the specified extension
GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE will be returned.

gnutls_x509_cert_get_extension_data

-- Function: int gnutls_x509_cert_get_extension_data (gnutls_x509_cert_t
CERT, int INDX, void * DATA, size_t * SIZEOF_DATA)
CERT: should contain a `gnutls_x509_cert_t` structure

INDX: Specifies which extension OID to send. Use zero to get the first one.

DATA: a pointer to a structure to hold the data (may be null)

SIZEOF_DATA: initially holds the size of `oid`

This function will return the requested extension data in the certificate. The extension data will be stored as a string in the provided buffer.

Use `gnutls_x509_cert_get_extension_info()` to extract the OID and critical flag. Use `gnutls_x509_cert_get_extension_by_oid()` instead, if you want to get data indexed by the extension OID rather than sequence.

Returns: On success, `GNUTLS_E_SUCCESS` (zero) is returned, otherwise an error code is returned. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

gnutls_x509_cert_get_extension_info

-- Function: int gnutls_x509_cert_get_extension_info (gnutls_x509_cert_t
CERT, int INDX, void * OID, size_t * SIZEOF_OID, int *

CRITICAL)

CERT: should contain a `gnutls_x509 crt_t` structure

INDX: Specifies which extension OID to send. Use zero to get the first one.

OID: a pointer to a structure to hold the OID

SIZEOF_OID: initially holds the maximum size of `oid`, on return holds actual size of `oid`.

CRITICAL: output variable with critical flag, may be NULL.

This function will return the requested extension OID in the certificate, and the critical flag for it. The extension OID will be stored as a string in the provided buffer. Use `gnutls_x509 crt_get_extension_data()` to extract the data.

If the buffer provided is not long enough to hold the output, then `*sizeof_oid` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

Returns: On success, `GNUTLS_E_SUCCESS` (zero) is returned, otherwise an error code is returned. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

gnutls_x509 crt_get_extension_oid

-- Function: int gnutls_x509 crt_get_extension_oid (gnutls_x509 crt_t
CERT, int INDX, void * OID, size_t * SIZEOF_OID)
CERT: should contain a `gnutls_x509 crt_t` structure

INDX: Specifies which extension OID to send. Use zero to get the first one.

OID: a pointer to a structure to hold the OID (may be null)

SIZEOF_OID: initially holds the size of `oid`

This function will return the requested extension OID in the certificate. The extension OID will be stored as a string in the provided buffer.

Returns: On success, `GNUTLS_E_SUCCESS` (zero) is returned, otherwise an error code is returned. If you have reached the last extension available `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will

be returned.

`gnutls_x509_cert_get_fingerprint`

-- Function: `int gnutls_x509_cert_get_fingerprint (gnutls_x509_cert_t CERT, gnutls_digest_algorithm_t ALGO, void * BUF, size_t * SIZEOF_BUF)`

CERT: should contain a ``gnutls_x509_cert_t'` structure

ALGO: is a digest algorithm

BUF: a pointer to a structure to hold the fingerprint (may be null)

SIZEOF_BUF: initially holds the size of ``buf'`

This function will calculate and copy the certificate's fingerprint in the provided buffer.

If the buffer is null then only the size will be filled.

Returns: ``GNUTLS_E_SHORT_MEMORY_BUFFER'` if the provided buffer is not long enough, and in that case the `*sizeof_buf` will be updated with the required size. On success 0 is returned.

`gnutls_x509_cert_get_issuer_dn_by_oid`

-- Function: `int gnutls_x509_cert_get_issuer_dn_by_oid (gnutls_x509_cert_t CERT, const char * OID, int INDX, unsigned int RAW_FLAG, void * BUF, size_t * SIZEOF_BUF)`

CERT: should contain a ``gnutls_x509_cert_t'` structure

OID: holds an Object Identified in null terminated string

INDX: In case multiple same OIDs exist in the RDN, this specifies which to send. Use zero to get the first one.

RAW_FLAG: If non zero returns the raw DER data of the DN part.

BUF: a pointer to a structure to hold the name (may be null)

SIZEOF_BUF: initially holds the size of ``buf'`

This function will extract the part of the name of the Certificate issuer specified by the given OID. The output, if the raw flag is not used, will be encoded as described in RFC2253. Thus a string that is ASCII or UTF-8 encoded, depending on the certificate data.

Some helper macros with popular OIDs can be found in gnutls/x509.h
If raw flag is zero, this function will only return known OIDs as
text. Other OIDs will be DER encoded, as described in RFC2253 - in
hex format with a '\#' prefix. You can check about known OIDs
using `gnutls_x509_dn_oid_known()`.

If `buf` is null then only the size will be filled.

Returns: GNUTLS_E_SHORT_MEMORY_BUFFER if the provided buffer is
not long enough, and in that case the *sizeof_buf will be updated
with the required size. On success 0 is returned.

gnutls_x509_cert_get_issuer_dn_oid

-- Function: int gnutls_x509_cert_get_issuer_dn_oid (gnutls_x509_cert_t
CERT, int INDX, void * OID, size_t * SIZEOF_OID)
CERT: should contain a `gnutls_x509_cert_t` structure

INDX: This specifies which OID to return. Use zero to get the
first one.

OID: a pointer to a buffer to hold the OID (may be null)

SIZEOF_OID: initially holds the size of `oid`

This function will extract the OIDs of the name of the Certificate
issuer specified by the given index.

If `oid` is null then only the size will be filled.

Returns: GNUTLS_E_SHORT_MEMORY_BUFFER if the provided buffer is
not long enough, and in that case the *sizeof_oid will be updated
with the required size. On success 0 is returned.

gnutls_x509_cert_get_issuer_dn

-- Function: int gnutls_x509_cert_get_issuer_dn (gnutls_x509_cert_t
CERT, char * BUF, size_t * SIZEOF_BUF)
CERT: should contain a `gnutls_x509_cert_t` structure

BUF: a pointer to a structure to hold the name (may be null)

SIZEOF_BUF: initially holds the size of `buf`

This function will copy the name of the Certificate issuer in the

provided buffer. The name will be in the form "C=xxxx,O=yyyy,CN=zzzz" as described in RFC2253. The output string will be ASCII or UTF-8 encoded, depending on the certificate data.

If `buf` is null then only the size will be filled.

Returns: GNUTLS_E_SHORT_MEMORY_BUFFER if the provided buffer is not long enough, and in that case the *sizeof_buf* will be updated with the required size. On success 0 is returned.

gnutls_x509_cert_get_issuer

-- Function: int gnutls_x509_cert_get_issuer (gnutls_x509_cert_t CERT,
gnutls_x509_dn_t * DN)

CERT: should contain a `gnutls_x509_cert_t` structure

DN: output variable with pointer to opaque DN

Return the Certificate's Issuer DN as an opaque data type. You may use `gnutls_x509_dn_get_rdn_ava()` to decode the DN.

Note that `dn` should be treated as constant. Because points into the `cert` object, you may not deallocate `cert` and continue to access `dn`.

Returns: Returns 0 on success, or an error code.

gnutls_x509_cert_get_key_id

-- Function: int gnutls_x509_cert_get_key_id (gnutls_x509_cert_t CRT,
unsigned int FLAGS, unsigned char * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)

CRT: Holds the certificate

FLAGS: should be 0 for now

OUTPUT_DATA: will contain the key ID

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will return a unique ID that depends on the public key parameters. This ID can be used in checking whether a certificate corresponds to the given private key.

If the buffer provided is not long enough to hold the output, then

*output_data_size is updated and GNUTLS_E_SHORT_MEMORY_BUFFER will be returned. The output will normally be a SHA-1 hash output, which is 20 bytes.

Return value: In case of failure a negative value will be returned, and 0 on success.

gnutls_x509_cert_get_key_purpose_oid

-- Function: int gnutls_x509_cert_get_key_purpose_oid
(gnutls_x509_cert_t CERT, int INDX, void * OID, size_t *
SIZEOF_OID, unsigned int * CRITICAL)
CERT: should contain a `gnutls_x509_cert_t' structure

INDX: This specifies which OID to return. Use zero to get the first one.

OID: a pointer to a buffer to hold the OID (may be null)

SIZEOF_OID: initially holds the size of `oid'

CRITICAL: output flag to indicate criticality of extension

This function will extract the key purpose OIDs of the Certificate specified by the given index. These are stored in the Extended Key Usage extension (2.5.29.37) See the GNUTLS_KP_* definitions for human readable names.

If `oid' is null then only the size will be filled.

Returns: `GNUTLS_E_SHORT_MEMORY_BUFFER' if the provided buffer is not long enough, and in that case the *sizeof_oid will be updated with the required size. On success 0 is returned.

gnutls_x509_cert_get_key_usage

-- Function: int gnutls_x509_cert_get_key_usage (gnutls_x509_cert_t
CERT, unsigned int * KEY_USAGE, unsigned int * CRITICAL)
CERT: should contain a `gnutls_x509_cert_t' structure

KEY_USAGE: where the key usage bits will be stored

CRITICAL: will be non zero if the extension is marked as critical

This function will return certificate's key usage, by reading the keyUsage X.509 extension (2.5.29.15). The key usage value will

ORed values of the: `GNUTLS_KEY_DIGITAL_SIGNATURE`,
`GNUTLS_KEY_NON_REPUDIATION`, `GNUTLS_KEY_KEY_ENCIPHERMENT`,
`GNUTLS_KEY_DATA_ENCIPHERMENT`, `GNUTLS_KEY_KEY_AGREEMENT`,
`GNUTLS_KEY_KEY_CERT_SIGN`, `GNUTLS_KEY_CRL_SIGN`,
`GNUTLS_KEY_ENCIPHER_ONLY`, `GNUTLS_KEY_DECIPHER_ONLY`.

Returns: the certificate key usage, or a negative value in case of parsing error. If the certificate does not contain the keyUsage extension `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned.

gnutls_x509_cert_get_pk_algorithm

-- Function: int gnutls_x509_cert_get_pk_algorithm (gnutls_x509_cert_t
CERT, unsigned int * BITS)
CERT: should contain a `gnutls_x509_cert_t` structure

BITS: if bits is non null it will hold the size of the parameters'
in bits

This function will return the public key algorithm of an X.509
certificate.

If bits is non null, it should have enough size to hold the
parameters size in bits. For RSA the bits returned is the modulus.
For DSA the bits returned are of the public exponent.

Returns: a member of the `gnutls_pk_algorithm_t` enumeration on
success, or a negative value on error.

gnutls_x509_cert_get_pk_dsa_raw

-- Function: int gnutls_x509_cert_get_pk_dsa_raw (gnutls_x509_cert_t
CERT, gnutls_datum_t * P, gnutls_datum_t * Q, gnutls_datum_t *
G, gnutls_datum_t * Y)
CERT: Holds the certificate

P: will hold the p

Q: will hold the q

G: will hold the g

Y: will hold the y

This function will export the DSA public key's parameters found in

the given certificate. The new parameters will be allocated using
'gnutls_malloc()' and will be stored in the appropriate datum.

Returns: 'GNUTLS_E_SUCCESS' on success, otherwise an error.

gnutls_x509_cert_get_pk_rsa_raw

-- Function: int gnutls_x509_cert_get_pk_rsa_raw (gnutls_x509_cert_t
CERT, gnutls_datum_t * M, gnutls_datum_t * E)

CERT: Holds the certificate

M: will hold the modulus

E: will hold the public exponent

This function will export the RSA public key's parameters found in
the given structure. The new parameters will be allocated using
'gnutls_malloc()' and will be stored in the appropriate datum.

Returns: 'GNUTLS_E_SUCCESS' on success, otherwise an error.

gnutls_x509_cert_get_proxy

-- Function: int gnutls_x509_cert_get_proxy (gnutls_x509_cert_t CERT,
unsigned int * CRITICAL, int * PATHLEN, char **
POLICYLANGUAGE, char ** POLICY, size_t * SIZEOF_POLICY)

CERT: should contain a 'gnutls_x509_cert_t' structure

CRITICAL: will be non zero if the extension is marked as critical

PATHLEN: pointer to output integer indicating path length (may be
NULL), non-negative values indicate a present pCPathLenConstraint
field and the actual value, -1 indicate that the field is absent.

POLICYLANGUAGE: output variable with OID of policy language

POLICY: output variable with policy data

SIZEOF_POLICY: output variable size of policy data

This function will get information from a proxy certificate. It
reads the ProxyCertInfo X.509 extension (1.3.6.1.5.5.7.1.14).

Returns: On success, 'GNUTLS_E_SUCCESS' (zero) is returned,
otherwise an error code is returned.

gnutls_x509_cert_get_raw_dn

-- Function: int gnutls_x509_cert_get_raw_dn (gnutls_x509_cert_t CERT,
gnutls_datum_t * START)

CERT: should contain a `gnutls_x509_cert_t' structure

START: will hold the starting point of the DN

This function will return a pointer to the DER encoded DN structure and the length.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value. or a negative value on error.

gnutls_x509_cert_get_raw_issuer_dn

-- Function: int gnutls_x509_cert_get_raw_issuer_dn (gnutls_x509_cert_t
CERT, gnutls_datum_t * START)

CERT: should contain a `gnutls_x509_cert_t' structure

START: will hold the starting point of the DN

This function will return a pointer to the DER encoded DN structure and the length.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value. or a negative value on error.

gnutls_x509_cert_get_serial

-- Function: int gnutls_x509_cert_get_serial (gnutls_x509_cert_t CERT,
void * RESULT, size_t * RESULT_SIZE)

CERT: should contain a `gnutls_x509_cert_t' structure

RESULT: The place where the serial number will be copied

RESULT_SIZE: Holds the size of the result field.

This function will return the X.509 certificate's serial number. This is obtained by the X509 Certificate serialNumber field. Serial is not always a 32 or 64bit number. Some CAs use large serial numbers, thus it may be wise to handle it as something opaque.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a

negative error value.and a negative value in case of an error.

gnutls_x509_cert_get_signature_algorithm

-- Function: int gnutls_x509_cert_get_signature_algorithm
(gnutls_x509_cert_t CERT)
CERT: should contain a `gnutls_x509_cert_t' structure

This function will return a value of the `gnutls_sign_algorithm_t'
enumeration that is the signature algorithm.

Returns: a `gnutls_sign_algorithm_t' value, or a negative value
on error.

gnutls_x509_cert_get_signature

-- Function: int gnutls_x509_cert_get_signature (gnutls_x509_cert_t
CERT, char * SIG, size_t * SIZEOF_SIG)
CERT: should contain a `gnutls_x509_cert_t' structure

SIG: a pointer where the signature part will be copied (may be
null).

SIZEOF_SIG: initially holds the size of `sig'

This function will extract the signature field of a certificate.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value. and a negative value on error.

gnutls_x509_cert_get_subject_alt_name2

-- Function: int gnutls_x509_cert_get_subject_alt_name2
(gnutls_x509_cert_t CERT, unsigned int SEQ, void * RET, size_t
* RET_SIZE, unsigned int * RET_TYPE, unsigned int * CRITICAL)
CERT: should contain a `gnutls_x509_cert_t' structure

SEQ: specifies the sequence number of the alt name (0 for the
first one, 1 for the second etc.)

RET: is the place where the alternative name will be copied to

RET_SIZE: holds the size of ret.

RET_TYPE: holds the type of the alternative name (one of

gnutls_x509_subject_alt_name_t).

CRITICAL: will be non zero if the extension is marked as critical (may be null)

This function will return the alternative names, contained in the given certificate. It is the same as ``gnutls_x509_cert_get_subject_alt_name()`` except for the fact that it will return the type of the alternative name in ``ret_type`` even if the function fails for some reason (i.e. the buffer provided is not enough).

Returns: the alternative subject name type on success, one of the enumerated ``gnutls_x509_subject_alt_name_t``. It will return ``GNUTLS_E_SHORT_MEMORY_BUFFER`` if ``ret_size`` is not large enough to hold the value. In that case ``ret_size`` will be updated with the required size. If the certificate does not have an Alternative name with the specified sequence number then ``GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE`` is returned.

gnutls_x509_cert_get_subject_alt_name

-- Function: int gnutls_x509_cert_get_subject_alt_name
(gnutls_x509_cert_t CERT, unsigned int SEQ, void * RET, size_t
* RET_SIZE, unsigned int * CRITICAL)
CERT: should contain a ``gnutls_x509_cert_t`` structure

SEQ: specifies the sequence number of the alt name (0 for the first one, 1 for the second etc.)

RET: is the place where the alternative name will be copied to

RET_SIZE: holds the size of ret.

CRITICAL: will be non zero if the extension is marked as critical (may be null)

This function will return the alternative names, contained in the given certificate.

This is specified in X509v3 Certificate Extensions. GNUTLS will return the Alternative name (2.5.29.17), or a negative error code.

When the SAN type is otherName, it will extract the data in the otherName's value field, and ``GNUTLS_SAN_OTHERNAME`` is returned.

You may use ``gnutls_x509_cert_get_subject_alt_othername_oid()`` to get the corresponding OID and the "virtual" SAN types (e.g.,

`GNUTLS_SAN_OTHERNAME_XMPP').

If an otherName OID is known, the data will be decoded. Otherwise the returned data will be DER encoded, and you will have to decode it yourself. Currently, only the RFC 3920 id-on-xmppAddr SAN is recognized.

**Returns:* the alternative subject name type on success, one of the enumerated `gnutls_x509_subject_alt_name_t'. It will return `GNUTLS_E_SHORT_MEMORY_BUFFER' if `ret_size' is not large enough to hold the value. In that case `ret_size' will be updated with the required size. If the certificate does not have an Alternative name with the specified sequence number then `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE' is returned.

gnutls_x509_cert_get_subject_alt_othername_oid

-- Function: int gnutls_x509_cert_get_subject_alt_othername_oid
(gnutls_x509_cert_t CERT, unsigned int SEQ, void * RET, size_t
* RET_SIZE)

CERT: should contain a `gnutls_x509_cert_t' structure

SEQ: specifies the sequence number of the alt name (0 for the first one, 1 for the second etc.)

RET: is the place where the otherName OID will be copied to

RET_SIZE: holds the size of ret.

This function will extract the type OID of an otherName Subject Alternative Name, contained in the given certificate, and return the type as an enumerated element.

This function is only useful if
`gnutls_x509_cert_get_subject_alt_name()' returned
`GNUTLS_SAN_OTHERNAME'.

**Returns:* the alternative subject name type on success, one of the enumerated gnutls_x509_subject_alt_name_t. For supported OIDs, it will return one of the virtual (GNUTLS_SAN_OTHERNAME_*) types, e.g. `GNUTLS_SAN_OTHERNAME_XMPP', and `GNUTLS_SAN_OTHERNAME' for unknown OIDs. It will return `GNUTLS_E_SHORT_MEMORY_BUFFER' if `ret_size' is not large enough to hold the value. In that case `ret_size' will be updated with the required size. If the certificate does not have an Alternative name with the specified sequence number and with the otherName type then `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE' is returned.

gnutls_x509_cert_get_subject_key_id

-- Function: int gnutls_x509_cert_get_subject_key_id (gnutls_x509_cert_t
CERT, void * RET, size_t * RET_SIZE, unsigned int * CRITICAL)
CERT: should contain a `gnutls_x509_cert_t' structure

RET: The place where the identifier will be copied

RET_SIZE: Holds the size of the result field.

CRITICAL: will be non zero if the extension is marked as critical
(may be null)

This function will return the X.509v3 certificate's subject key
identifier. This is obtained by the X.509 Subject Key identifier
extension field (2.5.29.14).

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value and a negative value in case of an error.

gnutls_x509_cert_get_subject

-- Function: int gnutls_x509_cert_get_subject (gnutls_x509_cert_t CERT,
gnutls_x509_dn_t * DN)
CERT: should contain a `gnutls_x509_cert_t' structure

DN: output variable with pointer to opaque DN.

Return the Certificate's Subject DN as an opaque data type. You
may use `gnutls_x509_dn_get_rdn_ava()' to decode the DN.

Note that `dn' should be treated as constant. Because points into
the `cert' object, you may not deallocate `cert' and continue to
access `dn'.

Returns: Returns 0 on success, or an error code.

gnutls_x509_cert_get_verify_algorithm

-- Function: int gnutls_x509_cert_get_verify_algorithm
(gnutls_x509_cert_t CRT, const gnutls_datum_t * SIGNATURE,
gnutls_digest_algorithm_t * HASH)

CRT: Holds the certificate

SIGNATURE: contains the signature

HASH: The result of the call with the hash algorithm used for signature

This function will read the certificate and the signed data to determine the hash algorithm used to generate the signature.

Returns: the 0 if the hash algorithm is found. A negative value is returned on error.

Since: 2.8.0

gnutls_x509_cert_get_version

-- Function: int gnutls_x509_cert_get_version (gnutls_x509_cert_t CERT)
CERT: should contain a `gnutls_x509_cert_t' structure

This function will return the version of the specified Certificate.

Returns: version of certificate, or a negative value on error.

gnutls_x509_cert_import

-- Function: int gnutls_x509_cert_import (gnutls_x509_cert_t CERT, const
gnutls_datum_t * DATA, gnutls_x509_cert_fmt_t FORMAT)
CERT: The structure to store the parsed certificate.

DATA: The DER or PEM encoded certificate.

FORMAT: One of DER or PEM

This function will convert the given DER or PEM encoded Certificate to the native gnutls_x509_cert_t format. The output will be stored in `cert'.

If the Certificate is PEM encoded it should have a header of "X509 CERTIFICATE", or "CERTIFICATE".

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_x509_cert_init

-- Function: int gnutls_x509_cert_init (gnutls_x509_cert_t * CERT)

CERT: The structure to be initialized

This function will initialize an X.509 certificate structure.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_cert_list_import

-- Function: int gnutls_x509_cert_list_import (gnutls_x509_cert_t *
CERTS, unsigned int * CERT_MAX, const gnutls_datum_t * DATA,
gnutls_x509_cert_fmt_t FORMAT, unsigned int FLAGS)

CERTS: The structures to store the parsed certificate. Must not be initialized.

CERT_MAX: Initially must hold the maximum number of certs. It will be updated with the number of certs available.

DATA: The PEM encoded certificate.

FORMAT: One of DER or PEM.

FLAGS: must be zero or an OR'd sequence of gnutls_certificate_import_flags.

This function will convert the given PEM encoded certificate list to the native gnutls_x509_cert_t format. The output will be stored in `certs`. They will be automatically initialized.

If the Certificate is PEM encoded it should have a header of "X509 CERTIFICATE", or "CERTIFICATE".

Returns: the number of certificates read or a negative error value.

gnutls_x509_cert_list_verify

-- Function: int gnutls_x509_cert_list_verify (const gnutls_x509_cert_t *
CERT_LIST, int CERT_LIST_LENGTH, const gnutls_x509_cert_t *
CA_LIST, int CA_LIST_LENGTH, const gnutls_x509_crl_t *
CRL_LIST, int CRL_LIST_LENGTH, unsigned int FLAGS, unsigned
int * VERIFY)

CERT_LIST: is the certificate list to be verified

CERT_LIST_LENGTH: holds the number of certificate in cert_list

CA_LIST: is the CA list which will be used in verification

CA_LIST_LENGTH: holds the number of CA certificate in CA_list

CRL_LIST: holds a list of CRLs.

CRL_LIST_LENGTH: the length of CRL list.

FLAGS: Flags that may be used to change the verification algorithm. Use OR of the gnutls_certificate_verify_flags enumerations.

VERIFY: will hold the certificate verification output.

This function will try to verify the given certificate list and return its status. If no flags are specified (0), this function will use the basicConstraints (2.5.29.19) PKIX extension. This means that only a certificate authority is allowed to sign a certificate.

You must also check the peer's name in order to check if the verified certificate belongs to the actual peer.

The certificate verification output will be put in `verify' and will be one or more of the gnutls_certificate_status_t enumerated elements bitwise or'd. For a more detailed verification status use `gnutls_x509 crt_verify()' per list element.

GNUTLS_CERT_INVALID: the certificate chain is not valid.

GNUTLS_CERT_REVOKED: a certificate in the chain has been revoked.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.and a negative value in case of an error.

gnutls_x509_crt_print

-- Function: int gnutls_x509_crt_print (gnutls_x509_crt_t CERT,
gnutls_certificate_print_formats_t FORMAT, gnutls_datum_t *
OUT)

CERT: The structure to be printed

FORMAT: Indicate the format to use

OUT: Newly allocated datum with zero terminated string.

This function will pretty print a X.509 certificate, suitable for

display to a human.

If the format is `GNUTLS_CRT_PRINT_FULL` then all fields of the certificate will be output, on multiple lines. The `GNUTLS_CRT_PRINT_ONELINE` format will generate one line with some selected fields, which is useful for logging purposes.

The output `out` needs to be deallocate using `gnutls_free()`.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

`gnutls_x509_cert_set_activation_time`

-- Function: int gnutls_x509_cert_set_activation_time
(gnutls_x509_cert_t CERT, time_t ACT_TIME)
CERT: a certificate of type `gnutls_x509_cert_t`

ACT_TIME: The actual time

This function will set the time this Certificate was or will be activated.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

`gnutls_x509_cert_set_authority_key_id`

-- Function: int gnutls_x509_cert_set_authority_key_id
(gnutls_x509_cert_t CERT, const void * ID, size_t ID_SIZE)
CERT: a certificate of type `gnutls_x509_cert_t`

ID: The key ID

ID_SIZE: Holds the size of the serial field.

This function will set the X.509 certificate's authority key ID extension. Only the keyIdentifier field can be set with this function.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

`gnutls_x509_cert_set_basic_constraints`

-- Function: int gnutls_x509_cert_set_basic_constraints

(gnutls_x509_cert_t CRT, unsigned int CA, int
PATHLENCONSTRAINT)

CRT: a certificate of type `gnutls_x509_cert_t'

CA: true(1) or false(0). Depending on the Certificate authority
status.

PATHLENCONSTRAINT: non-negative values indicate maximum length of
path, and negative values indicate that the pathLenConstraints
field should not be present.

This function will set the basicConstraints certificate extension.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

gnutls_x509_cert_set_ca_status

-- Function: int gnutls_x509_cert_set_ca_status (gnutls_x509_cert_t CRT,
unsigned int CA)

CRT: a certificate of type `gnutls_x509_cert_t'

CA: true(1) or false(0). Depending on the Certificate authority
status.

This function will set the basicConstraints certificate extension.

Use `gnutls_x509_cert_set_basic_constraints()' if you want to
control the pathLenConstraint field too.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

gnutls_x509_cert_set_crl_dist_points2

-- Function: int gnutls_x509_cert_set_crl_dist_points2
(gnutls_x509_cert_t CRT, gnutls_x509_subject_alt_name_t TYPE,
const void * DATA, unsigned int DATA_SIZE, unsigned int
REASON_FLAGS)

CRT: a certificate of type `gnutls_x509_cert_t'

TYPE: is one of the gnutls_x509_subject_alt_name_t enumerations

DATA: The data to be set

DATA_SIZE: The data size

REASON_FLAGS: revocation reasons

This function will set the CRL distribution points certificate extension.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

Since: 2.6.0

gnutls_x509_cert_set_crl_dist_points

-- Function: int gnutls_x509_cert_set_crl_dist_points
(gnutls_x509_cert_t CRT, gnutls_x509_subject_alt_name_t TYPE,
const void * DATA_STRING, unsigned int REASON_FLAGS)
CRT: a certificate of type `gnutls_x509_cert_t'

TYPE: is one of the gnutls_x509_subject_alt_name_t enumerations

DATA_STRING: The data to be set

REASON_FLAGS: revocation reasons

This function will set the CRL distribution points certificate extension.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_cert_set_crq_extensions

-- Function: int gnutls_x509_cert_set_crq_extensions (gnutls_x509_cert_t
CRT, gnutls_x509_crq_t CRQ)
CRT: a certificate of type `gnutls_x509_cert_t'

CRQ: holds a certificate request

This function will set extensions from the given request to the certificate.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

Since: 2.8.0

gnutls_x509_cert_set_crq

-- Function: int gnutls_x509_cert_set_crq (gnutls_x509_cert_t CRT,
gnutls_x509_crq_t CRQ)
CRT: a certificate of type `gnutls_x509_cert_t'

CRQ: holds a certificate request

This function will set the name and public parameters as well as the extensions from the given certificate request to the certificate. Only RSA keys are currently supported.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_x509_cert_set_dn_by_oid

-- Function: int gnutls_x509_cert_set_dn_by_oid (gnutls_x509_cert_t CRT,
const char * OID, unsigned int RAW_FLAG, const void * NAME,
unsigned int SIZEOF_NAME)
CRT: a certificate of type `gnutls_x509_cert_t'

OID: holds an Object Identifier in a null terminated string

RAW_FLAG: must be 0, or 1 if the data are DER encoded

NAME: a pointer to the name

SIZEOF_NAME: holds the size of `name'

This function will set the part of the name of the Certificate subject, specified by the given OID. The input string should be ASCII or UTF-8 encoded.

Some helper macros with popular OIDs can be found in gnutls/x509.h. With this function you can only set the known OIDs. You can test for known OIDs using `gnutls_x509_dn_oid_known()'. For OIDs that are not known (by gnutls) you should properly DER encode your data, and call this function with `raw_flag' set.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_x509_cert_set_expiration_time

-- Function: int gnutls_x509_cert_set_expiration_time

(gnutls_x509_cert_t CERT, time_t EXP_TIME)

CERT: a certificate of type `gnutls_x509_cert_t'

EXP_TIME: The actual time

This function will set the time this Certificate will expire.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_x509_cert_set_extension_by_oid

-- Function: int gnutls_x509_cert_set_extension_by_oid

(gnutls_x509_cert_t CERT, const char * OID, const void * BUF,
size_t SIZEOF_BUF, unsigned int CRITICAL)

CERT: a certificate of type `gnutls_x509_cert_t'

OID: holds an Object Identified in null terminated string

BUF: a pointer to a DER encoded data

SIZEOF_BUF: holds the size of `buf'

CRITICAL: should be non zero if the extension is to be marked as critical

This function will set an the extension, by the specified OID, in the certificate. The extension data should be binary data DER encoded.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.and a negative value in case of an error.

gnutls_x509_cert_set_issuer_dn_by_oid

-- Function: int gnutls_x509_cert_set_issuer_dn_by_oid

(gnutls_x509_cert_t CERT, const char * OID, unsigned int
RAW_FLAG, const void * NAME, unsigned int SIZEOF_NAME)

CERT: a certificate of type `gnutls_x509_cert_t'

OID: holds an Object Identifier in a null terminated string

RAW_FLAG: must be 0, or 1 if the data are DER encoded

NAME: a pointer to the name

SIZEOF_NAME: holds the size of `name`

This function will set the part of the name of the Certificate issuer, specified by the given OID. The input string should be ASCII or UTF-8 encoded.

Some helper macros with popular OIDs can be found in gnutls/x509.h
With this function you can only set the known OIDs. You can test for known OIDs using `gnutls_x509_dn_oid_known()`. For OIDs that are not known (by gnutls) you should properly DER encode your data, and call this function with `raw_flag` set.

Normally you do not need to call this function, since the signing operation will copy the signer's name as the issuer of the certificate.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_cert_set_key_purpose_oid

-- Function: int gnutls_x509_cert_set_key_purpose_oid
(gnutls_x509_cert_t CERT, const void * OID, unsigned int
CRITICAL)
CERT: a certificate of type `gnutls_x509_cert_t`

OID: a pointer to a null terminated string that holds the OID

CRITICAL: Whether this extension will be critical or not

This function will set the key purpose OIDs of the Certificate.
These are stored in the Extended Key Usage extension (2.5.29.37)
See the GNUTLS_KP_* definitions for human readable names.

Subsequent calls to this function will append OIDs to the OID list.

Returns: On success, `GNUTLS_E_SUCCESS` (zero) is returned,
otherwise an error code is returned.

gnutls_x509_cert_set_key_usage

-- Function: int gnutls_x509_cert_set_key_usage (gnutls_x509_cert_t CERT,
unsigned int USAGE)
CERT: a certificate of type `gnutls_x509_cert_t`

USAGE: an ORed sequence of the GNUTLS_KEY_* elements.

This function will set the keyUsage certificate extension.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_cert_set_key

-- Function: int gnutls_x509_cert_set_key (gnutls_x509_cert_t CRT,
gnutls_x509_privkey_t KEY)
CRT: a certificate of type `gnutls_x509_cert_t`

KEY: holds a private key

This function will set the public parameters from the given private key to the certificate. Only RSA keys are currently supported.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_cert_set_proxy_dn

-- Function: int gnutls_x509_cert_set_proxy_dn (gnutls_x509_cert_t CRT,
gnutls_x509_cert_t EECRT, unsigned int RAW_FLAG, const void *
NAME, unsigned int SIZEOF_NAME)
CRT: a gnutls_x509_cert_t structure with the new proxy cert

EECRT: the end entity certificate that will be issuing the proxy

RAW_FLAG: must be 0, or 1 if the CN is DER encoded

NAME: a pointer to the CN name, may be NULL (but MUST then be added later)

SIZEOF_NAME: holds the size of `name`

This function will set the subject in `crt` to the end entity's `eecrt` subject name, and add a single Common Name component `name` of size `sizeof_name`. This corresponds to the required proxy certificate naming style. Note that if `name` is `NULL`, you MUST set it later by using `gnutls_x509_cert_set_dn_by_oid()` or similar.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_cert_set_proxy

-- Function: int gnutls_x509_cert_set_proxy (gnutls_x509_cert_t CERT, int
PATHLENCONSTRAINT, const char * POLICYLANGUAGE, const char *
POLICY, size_t SIZEOF_POLICY)
CERT: a certificate of type `gnutls_x509_cert_t'

PATHLENCONSTRAINT: non-negative values indicate maximum length of
path, and negative values indicate that the pathLenConstraints
field should not be present.

POLICYLANGUAGE: OID describing the language of `policy'.

POLICY: opaque byte array with policy language, can be `NULL'

SIZEOF_POLICY: size of `policy'.

This function will set the proxyCertInfo extension.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

gnutls_x509_cert_set_serial

-- Function: int gnutls_x509_cert_set_serial (gnutls_x509_cert_t CERT,
const void * SERIAL, size_t SERIAL_SIZE)
CERT: a certificate of type `gnutls_x509_cert_t'

SERIAL: The serial number

SERIAL_SIZE: Holds the size of the serial field.

This function will set the X.509 certificate's serial number.
Serial is not always a 32 or 64bit number. Some CAs use large
serial numbers, thus it may be wise to handle it as something
opaque.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a
negative error value.

gnutls_x509_cert_set_subject_alt_name

-- Function: int gnutls_x509_cert_set_subject_alt_name
(gnutls_x509_cert_t CERT, gnutls_x509_subject_alt_name_t TYPE,

const void * DATA, unsigned int DATA_SIZE, unsigned int FLAGS)
CRT: a certificate of type `gnutls_x509 crt_t'

TYPE: is one of the gnutls_x509_subject_alt_name_t enumerations

DATA: The data to be set

DATA_SIZE: The size of data to be set

FLAGS: GNUTLS_FSAN_SET to clear previous data or
GNUTLS_FSAN_APPEND to append.

This function will set the subject alternative name certificate extension. It can set the following types:

&GNUTLS_SAN_DNSNAME: as a text string

&GNUTLS_SAN_RFC822NAME: as a text string

&GNUTLS_SAN_URI: as a text string

&GNUTLS_SAN_IPADDRESS: as a binary IP address (4 or 16 bytes)

Other values can be set as binary values with the proper DER encoding.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

Since: 2.6.0

gnutls_x509_crt_set_subject_alternative_name

-- Function: int gnutls_x509_crt_set_subject_alternative_name
(gnutls_x509_crt_t CRT, gnutls_x509_subject_alt_name_t TYPE,
const char * DATA_STRING)
CRT: a certificate of type `gnutls_x509 crt_t'

TYPE: is one of the gnutls_x509_subject_alt_name_t enumerations

DATA_STRING: The data to be set, a zero terminated string

This function will set the subject alternative name certificate extension. This function assumes that data can be expressed as a null terminated string.

The name of the function is unfortunate since it is inconsistent

with ``gnutls_x509_cert_get_subject_alt_name()`'.

***Returns:** * On success, ``GNUTLS_E_SUCCESS'` is returned, otherwise a negative error value.

`gnutls_x509_cert_set_subject_key_id`

-- Function: `int gnutls_x509_cert_set_subject_key_id (gnutls_x509_cert_t CERT, const void * ID, size_t ID_SIZE)`
CERT: a certificate of type ``gnutls_x509_cert_t'`

ID: The key ID

ID_SIZE: Holds the size of the serial field.

This function will set the X.509 certificate's subject key ID extension.

***Returns:** * On success, ``GNUTLS_E_SUCCESS'` is returned, otherwise a negative error value.

`gnutls_x509_cert_set_version`

-- Function: `int gnutls_x509_cert_set_version (gnutls_x509_cert_t CRT, unsigned int VERSION)`
CRT: a certificate of type ``gnutls_x509_cert_t'`

VERSION: holds the version number. For X.509v1 certificates must be 1.

This function will set the version of the certificate. This must be one for X.509 version 1, and so on. Plain certificates without extensions must have version set to one.

To create well-formed certificates, you must specify version 3 if you use any certificate extensions. Extensions are created by functions such as ``gnutls_x509_cert_set_subject_alt_name()`' or ``gnutls_x509_cert_set_key_usage()`'.

***Returns:** * On success, ``GNUTLS_E_SUCCESS'` is returned, otherwise a negative error value.

`gnutls_x509_cert_sign2`

-- Function: `int gnutls_x509_cert_sign2 (gnutls_x509_cert_t CRT,`

gnutls_x509_cert_t ISSUER, gnutls_x509_privkey_t ISSUER_KEY,
gnutls_digest_algorithm_t DIG, unsigned int FLAGS)

CRT: a certificate of type `gnutls_x509_cert_t'

ISSUER: is the certificate of the certificate issuer

ISSUER_KEY: holds the issuer's private key

DIG: The message digest to use, `GNUTLS_DIG_SHA1' is a safe choice

FLAGS: must be 0

This function will sign the certificate with the issuer's private key, and will copy the issuer's information into the certificate.

This must be the last step in a certificate generation since all the previously set parameters are now signed.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_x509_cert_sign

-- Function: int gnutls_x509_cert_sign (gnutls_x509_cert_t CRT,
gnutls_x509_cert_t ISSUER, gnutls_x509_privkey_t ISSUER_KEY)

CRT: a certificate of type `gnutls_x509_cert_t'

ISSUER: is the certificate of the certificate issuer

ISSUER_KEY: holds the issuer's private key

This function is the same as `gnutls_x509_cert_sign2()' with no flags, and SHA1 as the hash algorithm.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_x509_cert_verify_data

-- Function: int gnutls_x509_cert_verify_data (gnutls_x509_cert_t CRT,
unsigned int FLAGS, const gnutls_datum_t * DATA, const
gnutls_datum_t * SIGNATURE)

CRT: Holds the certificate

FLAGS: should be 0 for now

DATA: holds the data to be signed

SIGNATURE: contains the signature

This function will verify the given signed data, using the parameters from the certificate.

Returns: In case of a verification failure 0 is returned, and 1 on success.

gnutls_x509_cert_verify_hash

-- Function: int gnutls_x509_cert_verify_hash (gnutls_x509_cert_t CERT, unsigned int FLAGS, const gnutls_datum_t * HASH, const gnutls_datum_t * SIGNATURE)

CERT: Holds the certificate

FLAGS: should be 0 for now

HASH: holds the hash digest to be verified

SIGNATURE: contains the signature

This function will verify the given signed digest, using the parameters from the certificate.

Returns: In case of a verification failure 0 is returned, and 1 on success.

gnutls_x509_cert_verify

-- Function: int gnutls_x509_cert_verify (gnutls_x509_cert_t CERT, const gnutls_x509_cert_t * CA_LIST, int CA_LIST_LENGTH, unsigned int FLAGS, unsigned int * VERIFY)

CERT: is the certificate to be verified

CA_LIST: is one certificate that is considered to be trusted one

CA_LIST_LENGTH: holds the number of CA certificate in CA_list

FLAGS: Flags that may be used to change the verification algorithm. Use OR of the gnutls_certificate_verify_flags enumerations.

VERIFY: will hold the certificate verification output.

This function will try to verify the given certificate and return its status. The verification output in this functions cannot be GNUTLS_CERT_NOT_VALID.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.and a negative value in case of an error.

gnutls_x509_dn_deinit

-- Function: void gnutls_x509_dn_deinit (gnutls_x509_dn_t DN)
DN: a DN opaque object pointer.

This function deallocates the DN object as returned by `gnutls_x509_dn_import()`.

Since: 2.4.0

gnutls_x509_dn_export

-- Function: int gnutls_x509_dn_export (gnutls_x509_dn_t DN,
gnutls_x509_crt_fmt_t FORMAT, void * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)
DN: Holds the opaque DN object

FORMAT: the format of output params. One of PEM or DER.

OUTPUT_DATA: will contain a DN PEM or DER encoded

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will export the DN to DER or PEM format.

If the buffer provided is not long enough to hold the output, then *`output_data_size` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

If the structure is PEM encoded, it will have a header of "BEGIN NAME".

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_dn_get_rdn_ava

-- Function: int gnutls_x509_dn_get_rdn_ava (gnutls_x509_dn_t DN, int IRDN, int IAVA, gnutls_x509_ava_st * AVA)

DN: input variable with opaque DN pointer

IRDN: index of RDN

IAVA: index of AVA.

AVA: Pointer to structure which will hold output information.

Get pointers to data within the DN.

Note that `ava` will contain pointers into the `dn` structure, so you should not modify any data or deallocate it. Note also that the DN in turn points into the original certificate structure, and thus you may not deallocate the certificate and continue to access `dn`.

Returns: Returns 0 on success, or an error code.

gnutls_x509_dn_import

-- Function: int gnutls_x509_dn_import (gnutls_x509_dn_t DN, const gnutls_datum_t * DATA)

DN: the structure that will hold the imported DN

DATA: should contain a DER encoded RDN sequence

This function parses an RDN sequence and stores the result to a `gnutls_x509_dn_t` structure. The structure must have been initialized with `gnutls_x509_dn_init()`. You may use `gnutls_x509_dn_get_rdn_ava()` to decode the DN.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

Since: 2.4.0

gnutls_x509_dn_init

-- Function: int gnutls_x509_dn_init (gnutls_x509_dn_t * DN)

DN: the object to be initialized

This function initializes a `gnutls_x509_dn_t` structure.

The object returned must be deallocated using

``gnutls_x509_dn_deinit()'`.

**Returns:* On success, ``GNUTLS_E_SUCCESS'` is returned, otherwise a negative error value.

**Since:* 2.4.0

`gnutls_x509_dn_oid_known`

-- Function: `int gnutls_x509_dn_oid_known (const char * OID)`

OID: holds an Object Identifier in a null terminated string

This function will inform about known DN OIDs. This is useful since functions like ``gnutls_x509_cert_set_dn_by_oid()'` use the information on known OIDs to properly encode their input. Object Identifiers that are not known are not encoded by these functions, and their input is stored directly into the ASN.1 structure. In that case of unknown OIDs, you have the responsibility of DER encoding your data.

**Returns:* 1 on known OIDs and 0 otherwise.

`gnutls_x509_privkey_cpy`

-- Function: `int gnutls_x509_privkey_cpy (gnutls_x509_privkey_t DST, gnutls_x509_privkey_t SRC)`

DST: The destination key, which should be initialized.

SRC: The source key

This function will copy a private key from source to destination key.

**Returns:* On success, ``GNUTLS_E_SUCCESS'` is returned, otherwise a negative error value.

`gnutls_x509_privkey_deinit`

-- Function: `void gnutls_x509_privkey_deinit (gnutls_x509_privkey_t KEY)`

KEY: The structure to be initialized

This function will deinitialize a private key structure.

`gnutls_x509_privkey_export_dsa_raw`

-- Function: int gnutls_x509_privkey_export_dsa_raw
(gnutls_x509_privkey_t KEY, gnutls_datum_t * P,
gnutls_datum_t * Q, gnutls_datum_t * G, gnutls_datum_t * Y,
gnutls_datum_t * X)

KEY: a structure that holds the DSA parameters

P: will hold the p

Q: will hold the q

G: will hold the g

Y: will hold the y

X: will hold the x

This function will export the DSA private key's parameters found in the given structure. The new parameters will be allocated using `gnutls_malloc()` and will be stored in the appropriate datum.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_export_pkcs8

-- Function: int gnutls_x509_privkey_export_pkcs8
(gnutls_x509_privkey_t KEY, gnutls_x509_crt_fmt_t FORMAT,
const char * PASSWORD, unsigned int FLAGS, void *
OUTPUT_DATA, size_t * OUTPUT_DATA_SIZE)

KEY: Holds the key

FORMAT: the format of output params. One of PEM or DER.

PASSWORD: the password that will be used to encrypt the key.

FLAGS: an ORed sequence of gnutls_pkcs_encrypt_flags_t

OUTPUT_DATA: will contain a private key PEM or DER encoded

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will export the private key to a PKCS8 structure. Both RSA and DSA keys can be exported. For DSA keys we use PKCS `11` definitions. If the flags do not specify the encryption

cipher, then the default 3DES (PBES2) will be used.

The `password` can be either ASCII or UTF-8 in the default PBES2 encryption schemas, or ASCII for the PKCS12 schemas.

If the buffer provided is not long enough to hold the output, then `*output_data_size` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

If the structure is PEM encoded, it will have a header of "BEGIN ENCRYPTED PRIVATE KEY" or "BEGIN PRIVATE KEY" if encryption is not used.

`*Return value:` In case of failure a negative value will be returned, and 0 on success.

`gnutls_x509_privkey_export_rsa_raw`

```
-- Function: int gnutls_x509_privkey_export_rsa_raw
(gnutls_x509_privkey_t KEY, gnutls_datum_t * M,
 gnutls_datum_t * E, gnutls_datum_t * D, gnutls_datum_t * P,
 gnutls_datum_t * Q, gnutls_datum_t * U)
KEY: a structure that holds the rsa parameters
```

M: will hold the modulus

E: will hold the public exponent

D: will hold the private exponent

P: will hold the first prime (p)

Q: will hold the second prime (q)

U: will hold the coefficient

This function will export the RSA private key's parameters found in the given structure. The new parameters will be allocated using ``gnutls_malloc()` and will be stored in the appropriate datum.

`*Returns:` On success, ``GNUTLS_E_SUCCESS'` is returned, otherwise a negative error value.

`gnutls_x509_privkey_export`

```
-- Function: int gnutls_x509_privkey_export (gnutls_x509_privkey_t
```

KEY, gnutls_x509_crt_fmt_t FORMAT, void * OUTPUT_DATA, size_t
* OUTPUT_DATA_SIZE)

KEY: Holds the key

FORMAT: the format of output params. One of PEM or DER.

OUTPUT_DATA: will contain a private key PEM or DER encoded

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will export the private key to a PKCS1 structure for RSA keys, or an integer sequence for DSA keys. The DSA keys are in the same format with the parameters used by openssl.

If the buffer provided is not long enough to hold the output, then *`output_data_size` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

If the structure is PEM encoded, it will have a header of "BEGIN RSA PRIVATE KEY".

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_fix

-- Function: int gnutls_x509_privkey_fix (gnutls_x509_privkey_t KEY)

KEY: Holds the key

This function will recalculate the secondary parameters in a key. In RSA keys, this can be the coefficient and exponent^{1,2}.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_generate

-- Function: int gnutls_x509_privkey_generate (gnutls_x509_privkey_t KEY, gnutls_pk_algorithm_t ALGO, unsigned int BITS, unsigned int FLAGS)

KEY: should contain a `gnutls_x509_privkey_t` structure

ALGO: is one of RSA or DSA.

BITS: the size of the modulus

FLAGS: unused for now. Must be 0.

This function will generate a random private key. Note that this function must be called on an empty private key.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_get_key_id

-- Function: int gnutls_x509_privkey_get_key_id (gnutls_x509_privkey_t
KEY, unsigned int FLAGS, unsigned char * OUTPUT_DATA, size_t
* OUTPUT_DATA_SIZE)

KEY: Holds the key

FLAGS: should be 0 for now

OUTPUT_DATA: will contain the key ID

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will return a unique ID that depends on the public key parameters. This ID can be used in checking whether a certificate corresponds to the given key.

If the buffer provided is not long enough to hold the output, then *`output_data_size` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned. The output will normally be a SHA-1 hash output, which is 20 bytes.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_get_pk_algorithm

-- Function: int gnutls_x509_privkey_get_pk_algorithm
(gnutls_x509_privkey_t KEY)
KEY: should contain a `gnutls_x509_privkey_t` structure

This function will return the public key algorithm of a private key.

Returns: a member of the `gnutls_pk_algorithm_t` enumeration on success, or a negative value on error.

gnutls_x509_privkey_import_dsa_raw

-- Function: int gnutls_x509_privkey_import_dsa_raw
(gnutls_x509_privkey_t KEY, const gnutls_datum_t * P, const
gnutls_datum_t * Q, const gnutls_datum_t * G, const
gnutls_datum_t * Y, const gnutls_datum_t * X)

KEY: The structure to store the parsed key

P: holds the p

Q: holds the q

G: holds the g

Y: holds the y

X: holds the x

This function will convert the given DSA raw parameters to the native `gnutls_x509_privkey_t` format. The output will be stored in `key`.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_import_pkcs8

-- Function: int gnutls_x509_privkey_import_pkcs8
(gnutls_x509_privkey_t KEY, const gnutls_datum_t * DATA,
gnutls_x509_crt_fmt_t FORMAT, const char * PASSWORD, unsigned
int FLAGS)

KEY: The structure to store the parsed key

DATA: The DER or PEM encoded key.

FORMAT: One of DER or PEM

PASSWORD: the password to decrypt the key (if it is encrypted).

FLAGS: 0 if encrypted or GNUTLS_PKCS_PLAIN if not encrypted.

This function will convert the given DER or PEM encoded PKCS8 2.0 encrypted key to the native gnutls_x509_privkey_t format. The output will be stored in `key`. Both RSA and DSA keys can be imported, and flags can only be used to indicate an unencrypted

key.

The `password` can be either ASCII or UTF-8 in the default PBES2 encryption schemas, or ASCII for the PKCS12 schemas.

If the Certificate is PEM encoded it should have a header of "ENCRYPTED PRIVATE KEY", or "PRIVATE KEY". You only need to specify the flags if the key is DER encoded, since in that case the encryption status cannot be auto-detected.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_import_rsa_raw

```
-- Function: int gnutls_x509_privkey_import_rsa_raw
(gnutls_x509_privkey_t KEY, const gnutls_datum_t * M, const
gnutls_datum_t * E, const gnutls_datum_t * D, const
gnutls_datum_t * P, const gnutls_datum_t * Q, const
gnutls_datum_t * U)
```

KEY: The structure to store the parsed key

M: holds the modulus

E: holds the public exponent

D: holds the private exponent

P: holds the first prime (p)

Q: holds the second prime (q)

U: holds the coefficient

This function will convert the given RSA raw parameters to the native `gnutls_x509_privkey_t` format. The output will be stored in `key`.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_import

```
-- Function: int gnutls_x509_privkey_import (gnutls_x509_privkey_t
KEY, const gnutls_datum_t * DATA, gnutls_x509_crt_fmt_t
FORMAT)
```

KEY: The structure to store the parsed key

DATA: The DER or PEM encoded certificate.

FORMAT: One of DER or PEM

This function will convert the given DER or PEM encoded key to the native `gnutls_x509_privkey_t` format. The output will be stored in `key`.

If the key is PEM encoded it should have a header of "RSA PRIVATE KEY", or "DSA PRIVATE KEY".

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_init

-- Function: int gnutls_x509_privkey_init (gnutls_x509_privkey_t * KEY)
KEY: The structure to be initialized

This function will initialize an private key structure.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_sign_data

-- Function: int gnutls_x509_privkey_sign_data (gnutls_x509_privkey_t
KEY, gnutls_digest_algorithm_t DIGEST, unsigned int FLAGS,
const gnutls_datum_t * DATA, void * SIGNATURE, size_t *
SIGNATURE_SIZE)

KEY: Holds the key

DIGEST: should be MD5 or SHA1

FLAGS: should be 0 for now

DATA: holds the data to be signed

SIGNATURE: will contain the signature

SIGNATURE_SIZE: holds the size of signature (and will be replaced
by the new size)

This function will sign the given data using a signature algorithm

supported by the private key. Signature algorithms are always used together with a hash functions. Different hash functions may be used for the RSA algorithm, but only SHA-1 for the DSA keys.

If the buffer provided is not long enough to hold the output, then *`signature_size` is updated and `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_sign_hash

-- Function: int gnutls_x509_privkey_sign_hash (gnutls_x509_privkey_t
KEY, const gnutls_datum_t * HASH, gnutls_datum_t * SIGNATURE)
KEY: Holds the key

HASH: holds the data to be signed

SIGNATURE: will contain newly allocated signature

This function will sign the given hash using the private key. Do not use this function directly unless you know what it is. Typical signing requires the data to be hashed and stored in special formats (e.g. BER Digest-Info for RSA).

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_x509_privkey_verify_data

-- Function: int gnutls_x509_privkey_verify_data
(gnutls_x509_privkey_t KEY, unsigned int FLAGS, const
gnutls_datum_t * DATA, const gnutls_datum_t * SIGNATURE)
KEY: Holds the key

FLAGS: should be 0 for now

DATA: holds the data to be signed

SIGNATURE: contains the signature

This function will verify the given signed data, using the parameters in the private key.

Returns: In case of a verification failure 0 is returned, and 1

on success.

gnutls_x509_rdn_get_by_oid

-- Function: int gnutls_x509_rdn_get_by_oid (const gnutls_datum_t *
IDN, const char * OID, int INDX, unsigned int RAW_FLAG, void
* BUF, size_t * SIZEOF_BUF)

IDN: should contain a DER encoded RDN sequence

OID: an Object Identifier

INDX: In case multiple same OIDs exist in the RDN indicates which
to send. Use 0 for the first one.

RAW_FLAG: If non zero then the raw DER data are returned.

BUF: a pointer to a structure to hold the peer's name

SIZEOF_BUF: holds the size of `buf`

This function will return the name of the given Object identifier,
of the RDN sequence. The name will be encoded using the rules
from RFC2253.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, or
`GNUTLS_E_SHORT_MEMORY_BUFFER` is returned and *`sizeof_buf` is
updated if the provided buffer is not long enough, otherwise a
negative error value.

gnutls_x509_rdn_get_oid

-- Function: int gnutls_x509_rdn_get_oid (const gnutls_datum_t * IDN,
int INDX, void * BUF, size_t * SIZEOF_BUF)

IDN: should contain a DER encoded RDN sequence

INDX: Indicates which OID to return. Use 0 for the first one.

BUF: a pointer to a structure to hold the peer's name OID

SIZEOF_BUF: holds the size of `buf`

This function will return the specified Object identifier, of the
RDN sequence.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, or
`GNUTLS_E_SHORT_MEMORY_BUFFER` is returned and *`sizeof_buf` is

updated if the provided buffer is not long enough, otherwise a negative error value.

Since: 2.4.0

gnutls_x509_rdn_get

-- Function: int gnutls_x509_rdn_get (const gnutls_datum_t * IDN, char * BUF, size_t * SIZEOF_BUF)

IDN: should contain a DER encoded RDN sequence

BUF: a pointer to a structure to hold the peer's name

SIZEOF_BUF: holds the size of `buf`

This function will return the name of the given RDN sequence. The name will be in the form "C=xxxx,O=yyyy,CN=zzzz" as described in RFC2253.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, or `GNUTLS_E_SHORT_MEMORY_BUFFER` is returned and *`sizeof_buf` is updated if the provided buffer is not long enough, otherwise a negative error value.

File: gnutls.info, Node: GnuTLS-extra functions, Next: OpenPGP functions, Prev: X.509 certificate functions, Up: Function reference

9.3 GnuTLS-extra Functions

=====

These functions are only available in the GPLv3+ version of the library called `gnutls-extra`. The prototypes for this library lie in `gnutls/extra.h`.

gnutls_extra_check_version

-- Function: const char * gnutls_extra_check_version (const char * REQ_VERSION)

REQ_VERSION: version string to compare with, or `NULL`.

Check GnuTLS Extra Library version.

See `GNUTLS_EXTRA_VERSION` for a suitable `req_version` string.

Return value: Check that the version of the library is at

minimum the one given as a string in `req_version` and return the actual version string of the library; return `NULL` if the condition is not met. If `NULL` is passed to this function no check is done and only the version string is returned.

gnutls_global_init_extra

-- Function: int gnutls_global_init_extra (VOID)
This function initializes the global state of gnutls-extra library to defaults.

Note that `gnutls_global_init()` has to be called before this function. If this function is not called then the gnutls-extra library will not be usable.

This function is not thread safe, see the discussion for `gnutls_global_init()` on how to deal with that.

Returns: On success, `GNUTLS_E_SUCCESS` (zero) is returned, otherwise an error code is returned.

File: gnutls.info, Node: OpenPGP functions, Next: TLS Inner Application (TLS/IA) functions, Prev: GnuTLS-extra functions, Up: Function reference

9.4 OpenPGP Functions

=====

The following functions are to be used for OpenPGP certificate handling. Their prototypes lie in `gnutls/openpgp.h`.

gnutls_certificate_set_openpgp_key_file2

-- Function: int gnutls_certificate_set_openpgp_key_file2
(gnutls_certificate_credentials_t RES, const char * CERTFILE,
const char * KEYFILE, const char * SUBKEY_ID,
gnutls_openpgp_cert_fmt_t FORMAT)
RES: the destination context to save the data.

CERTFILE: the file that contains the public key.

KEYFILE: the file that contains the secret key.

SUBKEY_ID: a hex encoded subkey id

FORMAT: the format of the keys

This function is used to load OpenPGP keys into the GnuTLS credential structure. The files should contain non encrypted keys.

The special keyword "auto" is also accepted as 'subkey_id'. In that case the 'gnutls_openpgp_cert_get_auth_subkey()' will be used to retrieve the subkey.

Returns: On success, 'GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

Since: 2.4.0

gnutls_certificate_set_openpgp_key_file

-- Function: int gnutls_certificate_set_openpgp_key_file
(gnutls_certificate_credentials_t RES, const char * CERTFILE,
const char * KEYFILE, gnutls_openpgp_cert_fmt_t FORMAT)

RES: the destination context to save the data.

CERTFILE: the file that contains the public key.

KEYFILE: the file that contains the secret key.

FORMAT: the format of the keys

This function is used to load OpenPGP keys into the GnuTLS credentials structure. The files should only contain one key which is not encrypted.

Returns: On success, 'GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_certificate_set_openpgp_key_mem2

-- Function: int gnutls_certificate_set_openpgp_key_mem2
(gnutls_certificate_credentials_t RES, const gnutls_datum_t *
CERT, const gnutls_datum_t * KEY, const char * SUBKEY_ID,
gnutls_openpgp_cert_fmt_t FORMAT)

RES: the destination context to save the data.

CERT: the datum that contains the public key.

KEY: the datum that contains the secret key.

SUBKEY_ID: a hex encoded subkey id

FORMAT: the format of the keys

This function is used to load OpenPGP keys into the GnuTLS credentials structure. The files should only contain one key which is not encrypted.

The special keyword "auto" is also accepted as `subkey_id'. In that case the `gnutls_openpgp_cert_get_auth_subkey()' will be used to retrieve the subkey.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

Since: 2.4.0

gnutls_certificate_set_openpgp_key_mem

-- Function: int gnutls_certificate_set_openpgp_key_mem
(gnutls_certificate_credentials_t RES, const gnutls_datum_t *
CERT, const gnutls_datum_t * KEY, gnutls_openpgp_cert_fmt_t
FORMAT)

RES: the destination context to save the data.

CERT: the datum that contains the public key.

KEY: the datum that contains the secret key.

FORMAT: the format of the keys

This function is used to load OpenPGP keys into the GnuTLS credential structure. The files should contain non encrypted keys.

Returns: On success, `GNUTLS_E_SUCCESS' is returned, otherwise a negative error value.

gnutls_certificate_set_openpgp_keyring_file

-- Function: int gnutls_certificate_set_openpgp_keyring_file
(gnutls_certificate_credentials_t C, const char * FILE,
gnutls_openpgp_cert_fmt_t FORMAT)

C: A certificate credentials structure

FILE: filename of the keyring.

FORMAT: format of keyring.

The function is used to set keyrings that will be used internally by various OpenPGP functions. For example to find a key when it is needed for an operations. The keyring will also be used at the verification functions.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

`gnutls_certificate_set_openpgp_keyring_mem`

-- Function: `int gnutls_certificate_set_openpgp_keyring_mem`
 (`gnutls_certificate_credentials_t C`, `const opaque * DATA`,
 `size_t DLEN`, `gnutls_openpgp_cert_fmt_t FORMAT`)
C: A certificate credentials structure

DATA: buffer with keyring data.

DLEN: length of data buffer.

FORMAT: the format of the keyring

The function is used to set keyrings that will be used internally by various OpenPGP functions. For example to find a key when it is needed for an operations. The keyring will also be used at the verification functions.

Returns: On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

`gnutls_certificate_set_openpgp_key`

-- Function: `int gnutls_certificate_set_openpgp_key`
 (`gnutls_certificate_credentials_t RES`, `gnutls_openpgp_cert_t`
 `CRT`, `gnutls_openpgp_privkey_t PKEY`)
RES: is a `gnutls_certificate_credentials_t' structure.

PKEY: is an openpgp private key

This function sets a certificate/private key pair in the `gnutls_certificate_credentials_t` structure. This function may be called more than once (in case multiple keys/certificates exist for the server).

With this function the subkeys of the certificate are not used.

Returns: On success, `GNUTLS_E_SUCCESS` (zero) is returned, otherwise an error code is returned.

gnutls_openpgp_cert_check_hostname

-- Function: int gnutls_openpgp_cert_check_hostname
(gnutls_openpgp_cert_t KEY, const char * HOSTNAME)
KEY: should contain a `gnutls_openpgp_cert_t` structure

HOSTNAME: A null terminated string that contains a DNS name

This function will check if the given key's owner matches the given hostname. This is a basic implementation of the matching described in RFC2818 (HTTPS), which takes into account wildcards.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_cert_deinit

-- Function: void gnutls_openpgp_cert_deinit (gnutls_openpgp_cert_t KEY)
KEY: The structure to be initialized

This function will deinitialize a key structure.

gnutls_openpgp_cert_export

-- Function: int gnutls_openpgp_cert_export (gnutls_openpgp_cert_t KEY,
gnutls_openpgp_cert_fmt_t FORMAT, void * OUTPUT_DATA, size_t *
OUTPUT_DATA_SIZE)

KEY: Holds the key.

FORMAT: One of gnutls_openpgp_cert_fmt_t elements.

OUTPUT_DATA: will contain the key base64 encoded or raw

OUTPUT_DATA_SIZE: holds the size of output_data (and will be replaced by the actual size of parameters)

This function will convert the given key to RAW or Base64 format. If the buffer provided is not long enough to hold the output, then `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_cert_get_auth_subkey

-- Function: int gnutls_openpgp_cert_get_auth_subkey
(gnutls_openpgp_cert_t CRT, gnutls_openpgp_keyid_t KEYID,
unsigned int FLAG)

CRT: the structure that contains the OpenPGP public key.

KEYID: the struct to save the keyid.

FLAG: Non zero indicates that a valid subkey is always returned.

Returns the 64-bit keyID of the first valid OpenPGP subkey marked for authentication. If flag is non zero and no authentication subkey exists, then a valid subkey will be returned even if it is not marked for authentication. Returns the 64-bit keyID of the first valid OpenPGP subkey marked for authentication. If flag is non zero and no authentication subkey exists, then a valid subkey will be returned even if it is not marked for authentication.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_cert_get_creation_time

-- Function: time_t gnutls_openpgp_cert_get_creation_time
(gnutls_openpgp_cert_t KEY)

KEY: the structure that contains the OpenPGP public key.

Get key creation time.

Returns: the timestamp when the OpenPGP key was created.

gnutls_openpgp_cert_get_expiration_time

-- Function: time_t gnutls_openpgp_cert_get_expiration_time
(gnutls_openpgp_cert_t KEY)

KEY: the structure that contains the OpenPGP public key.

Get key expiration time. A value of '0' means that the key doesn't expire at all.

Returns: the time when the OpenPGP key expires.

gnutls_openpgp_cert_get_fingerprint

-- Function: int gnutls_openpgp_cert_get_fingerprint

(gnutls_openpgp_cert_t KEY, void * FPR, size_t * FPRLLEN)

KEY: the raw data that contains the OpenPGP public key.

FPR: the buffer to save the fingerprint, must hold at least 20 bytes.

FPRLLEN: the integer to save the length of the fingerprint.

Get key fingerprint. Depending on the algorithm, the fingerprint can be 16 or 20 bytes.

Returns: On success, 0 is returned. Otherwise, an error code.

gnutls_openpgp_cert_get_key_id

-- Function: int gnutls_openpgp_cert_get_key_id (gnutls_openpgp_cert_t
KEY, gnutls_openpgp_keyid_t KEYID)

KEY: the structure that contains the OpenPGP public key.

KEYID: the buffer to save the keyid.

Get key id string.

Returns: the 64-bit keyID of the OpenPGP key.

Since: 2.4.0

gnutls_openpgp_cert_get_key_usage

-- Function: int gnutls_openpgp_cert_get_key_usage
(gnutls_openpgp_cert_t KEY, unsigned int * KEY_USAGE)

KEY: should contain a gnutls_openpgp_cert_t structure

KEY_USAGE: where the key usage bits will be stored

This function will return certificate's key usage, by checking the key algorithm. The key usage value will ORed values of the:

`GNUTLS_KEY_DIGITAL_SIGNATURE', `GNUTLS_KEY_KEY_ENCRYPTMENT'.

Returns: `GNUTLS_E_SUCCESS' on success, or an error code.

gnutls_openpgp_cert_get_name

-- Function: int gnutls_openpgp_cert_get_name (gnutls_openpgp_cert_t
KEY, int IDX, char * BUF, size_t * SIZEOF_BUF)

KEY: the structure that contains the OpenPGP public key.

IDX: the index of the ID to extract

BUF: a pointer to a structure to hold the name

SIZEOF_BUF: holds the maximum size of `buf`, on return hold the actual/required size of `buf`.

Extracts the userID from the parsed OpenPGP key.

Returns: `GNUTLS_E_SUCCESS` on success, and if the index of the ID does not exist `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE`, or an error code.

gnutls_openpgp_cert_get_pk_algorithm

-- Function: gnutls_pk_algorithm_t gnutls_openpgp_cert_get_pk_algorithm
(gnutls_openpgp_cert_t KEY, unsigned int * BITS)
KEY: is an OpenPGP key

BITS: if bits is non null it will hold the size of the parameters' in bits

This function will return the public key algorithm of an OpenPGP certificate.

If bits is non null, it should have enough size to hold the parameters size in bits. For RSA the bits returned is the modulus. For DSA the bits returned are of the public exponent.

Returns: a member of the `gnutls_pk_algorithm_t` enumeration on success, or a negative value on error.

gnutls_openpgp_cert_get_pk_dsa_raw

-- Function: int gnutls_openpgp_cert_get_pk_dsa_raw
(gnutls_openpgp_cert_t CRT, gnutls_datum_t * P, gnutls_datum_t * Q, gnutls_datum_t * G, gnutls_datum_t * Y)
CRT: Holds the certificate

P: will hold the p

Q: will hold the q

G: will hold the g

Y: will hold the y

This function will export the DSA public key's parameters found in the given certificate. The new parameters will be allocated using ``gnutls_malloc()` and will be stored in the appropriate datum.

Returns: ``GNUTLS_E_SUCCESS'` on success, otherwise an error.

Since: 2.4.0

`gnutls_openpgp_cert_get_pk_rsa_raw`

-- Function: `int gnutls_openpgp_cert_get_pk_rsa_raw`
(`gnutls_openpgp_cert_t` CRT, `gnutls_datum_t` * M, `gnutls_datum_t` * E)

CRT: Holds the certificate

M: will hold the modulus

E: will hold the public exponent

This function will export the RSA public key's parameters found in the given structure. The new parameters will be allocated using ``gnutls_malloc()` and will be stored in the appropriate datum.

Returns: ``GNUTLS_E_SUCCESS'` on success, otherwise an error.

Since: 2.4.0

`gnutls_openpgp_cert_get_preferred_key_id`

-- Function: `int gnutls_openpgp_cert_get_preferred_key_id`
(`gnutls_openpgp_cert_t` KEY, `gnutls_openpgp_keyid_t` KEYID)

KEY: the structure that contains the OpenPGP public key.

KEYID: the struct to save the keyid.

Get preferred key id. If it hasn't been set it returns ``GNUTLS_E_INVALID_REQUEST'`.

Returns: the 64-bit preferred keyID of the OpenPGP key.

`gnutls_openpgp_cert_get_revoked_status`

-- Function: int gnutls_openpgp_cert_get_revoked_status
(gnutls_openpgp_cert_t KEY)
KEY: the structure that contains the OpenPGP public key.

Get revocation status of key.

Returns: true (1) if the key has been revoked, or false (0) if it has not.

Since: 2.4.0

gnutls_openpgp_cert_get_subkey_count

-- Function: int gnutls_openpgp_cert_get_subkey_count
(gnutls_openpgp_cert_t KEY)
KEY: is an OpenPGP key

This function will return the number of subkeys present in the given OpenPGP certificate.

Returns: the number of subkeys, or a negative value on error.

Since: 2.4.0

gnutls_openpgp_cert_get_subkey_creation_time

-- Function: time_t gnutls_openpgp_cert_get_subkey_creation_time
(gnutls_openpgp_cert_t KEY, unsigned int IDX)
KEY: the structure that contains the OpenPGP public key.

IDX: the subkey index

Get subkey creation time.

Returns: the timestamp when the OpenPGP sub-key was created.

Since: 2.4.0

gnutls_openpgp_cert_get_subkey_expiration_time

-- Function: time_t gnutls_openpgp_cert_get_subkey_expiration_time
(gnutls_openpgp_cert_t KEY, unsigned int IDX)
KEY: the structure that contains the OpenPGP public key.

IDX: the subkey index

Get subkey expiration time. A value of '0' means that the key doesn't expire at all.

Returns: the time when the OpenPGP key expires.

Since: 2.4.0

gnutls_openpgp_crt_get_subkey_fingerprint

-- Function: int gnutls_openpgp_crt_get_subkey_fingerprint
(gnutls_openpgp_crt_t KEY, unsigned int IDX, void * FPR,
size_t * FPRLLEN)

KEY: the raw data that contains the OpenPGP public key.

IDX: the subkey index

FPR: the buffer to save the fingerprint, must hold at least 20 bytes.

FPRLLEN: the integer to save the length of the fingerprint.

Get key fingerprint of a subkey. Depending on the algorithm, the fingerprint can be 16 or 20 bytes.

Returns: On success, 0 is returned. Otherwise, an error code.

Since: 2.4.0

gnutls_openpgp_crt_get_subkey_idx

-- Function: int gnutls_openpgp_crt_get_subkey_idx
(gnutls_openpgp_crt_t KEY, const gnutls_openpgp_keyid_t KEYID)

KEY: the structure that contains the OpenPGP public key.

KEYID: the keyid.

Get subkey's index.

Returns: the index of the subkey or a negative error value.

Since: 2.4.0

gnutls_openpgp_crt_get_subkey_id

-- Function: int gnutls_openpgp_cert_get_subkey_id
(gnutls_openpgp_cert_t KEY, unsigned int IDX,
gnutls_openpgp_keyid_t KEYID)
KEY: the structure that contains the OpenPGP public key.

IDX: the subkey index

KEYID: the buffer to save the keyid.

Get the subkey's key-id.

Returns: the 64-bit keyID of the OpenPGP key.

gnutls_openpgp_cert_get_subkey_pk_algorithm

-- Function: gnutls_pk_algorithm_t
gnutls_openpgp_cert_get_subkey_pk_algorithm (gnutls_openpgp_cert_t KEY,
unsigned int IDX, unsigned int * BITS)

KEY: is an OpenPGP key

IDX: is the subkey index

BITS: if bits is non null it will hold the size of the parameters'
in bits

This function will return the public key algorithm of a subkey of
an OpenPGP certificate.

If bits is non null, it should have enough size to hold the
parameters size in bits. For RSA the bits returned is the modulus.
For DSA the bits returned are of the public exponent.

Returns: a member of the `gnutls_pk_algorithm_t' enumeration on
success, or a negative value on error.

Since: 2.4.0

gnutls_openpgp_cert_get_subkey_pk_dsa_raw

-- Function: int gnutls_openpgp_cert_get_subkey_pk_dsa_raw
(gnutls_openpgp_cert_t CRT, unsigned int IDX, gnutls_datum_t *
P, gnutls_datum_t * Q, gnutls_datum_t * G, gnutls_datum_t * Y)

CRT: Holds the certificate

IDX: Is the subkey index

P: will hold the p

Q: will hold the q

G: will hold the g

Y: will hold the y

This function will export the DSA public key's parameters found in the given certificate. The new parameters will be allocated using `gnutls_malloc()` and will be stored in the appropriate datum.

Returns: `GNUTLS_E_SUCCESS` on success, otherwise an error.

Since: 2.4.0

`gnutls_openpgp_cert_get_subkey_pk_rsa_raw`

-- Function: `int gnutls_openpgp_cert_get_subkey_pk_rsa_raw`
(`gnutls_openpgp_cert_t` CRT, unsigned int IDX, `gnutls_datum_t` *
M, `gnutls_datum_t` * E)
CRT: Holds the certificate

IDX: Is the subkey index

M: will hold the modulus

E: will hold the public exponent

This function will export the RSA public key's parameters found in the given structure. The new parameters will be allocated using `gnutls_malloc()` and will be stored in the appropriate datum.

Returns: `GNUTLS_E_SUCCESS` on success, otherwise an error.

Since: 2.4.0

`gnutls_openpgp_cert_get_subkey_revoked_status`

-- Function: `int gnutls_openpgp_cert_get_subkey_revoked_status`
(`gnutls_openpgp_cert_t` KEY, unsigned int IDX)
KEY: the structure that contains the OpenPGP public key.

IDX: is the subkey index

Get subkey revocation status. A negative value indicates an error.

Returns: true (1) if the key has been revoked, or false (0) if it has not.

Since: 2.4.0

gnutls_openpgp_cert_get_subkey_usage

-- Function: int gnutls_openpgp_cert_get_subkey_usage
(gnutls_openpgp_cert_t KEY, unsigned int IDX, unsigned int *
KEY_USAGE)

KEY: should contain a gnutls_openpgp_cert_t structure

IDX: the subkey index

KEY_USAGE: where the key usage bits will be stored

This function will return certificate's key usage, by checking the key algorithm. The key usage value will ORed values of `GNUTLS_KEY_DIGITAL_SIGNATURE` or `GNUTLS_KEY_KEY_ENCIPHERMENT`.

A negative value may be returned in case of parsing error.

Returns: key usage value.

Since: 2.4.0

gnutls_openpgp_cert_get_version

-- Function: int gnutls_openpgp_cert_get_version (gnutls_openpgp_cert_t
KEY)

KEY: the structure that contains the OpenPGP public key.

Extract the version of the OpenPGP key.

Returns: the version number is returned, or a negative value on errors.

gnutls_openpgp_cert_import

-- Function: int gnutls_openpgp_cert_import (gnutls_openpgp_cert_t KEY,
const gnutls_datum_t * DATA, gnutls_openpgp_cert_fmt_t FORMAT)

KEY: The structure to store the parsed key.

DATA: The RAW or BASE64 encoded key.

FORMAT: One of gnutls_openpgp_cert_fmt_t elements.

This function will convert the given RAW or Base64 encoded key to the native `gnutls_openpgp_cert_t` format. The output will be stored in 'key'.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_cert_init

-- Function: int gnutls_openpgp_cert_init (gnutls_openpgp_cert_t * KEY)
KEY: The structure to be initialized

This function will initialize an OpenPGP key structure.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_cert_print

-- Function: int gnutls_openpgp_cert_print (gnutls_openpgp_cert_t CERT,
gnutls_certificate_print_formats_t FORMAT, gnutls_datum_t *
OUT)

CERT: The structure to be printed

FORMAT: Indicate the format to use

OUT: Newly allocated datum with zero terminated string.

This function will pretty print an OpenPGP certificate, suitable for display to a human.

The format should be zero for future compatibility.

The output `out` needs to be deallocate using `gnutls_free()`.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_cert_set_preferred_key_id

-- Function: int gnutls_openpgp_cert_set_preferred_key_id
(gnutls_openpgp_cert_t KEY, const gnutls_openpgp_keyid_t KEYID)
KEY: the structure that contains the OpenPGP public key.

KEYID: the selected keyid

This allows setting a preferred key id for the given certificate.

This key will be used by functions that involve key handling.

Returns: On success, `GNUTLS_E_SUCCESS` (zero) is returned, otherwise an error code is returned.

gnutls_openpgp_cert_verify_ring

-- Function: int gnutls_openpgp_cert_verify_ring (gnutls_openpgp_cert_t
KEY, gnutls_openpgp_keyring_t KEYRING, unsigned int FLAGS,
unsigned int * VERIFY)

KEY: the structure that holds the key.

KEYRING: holds the keyring to check against

FLAGS: unused (should be 0)

VERIFY: will hold the certificate verification output.

Verify all signatures in the key, using the given set of keys
(keyring).

The key verification output will be put in `verify` and will be one
or more of the `gnutls_certificate_status_t` enumerated elements
bitwise or'd.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_cert_verify_self

-- Function: int gnutls_openpgp_cert_verify_self (gnutls_openpgp_cert_t
KEY, unsigned int FLAGS, unsigned int * VERIFY)

KEY: the structure that holds the key.

FLAGS: unused (should be 0)

VERIFY: will hold the key verification output.

Verifies the self signature in the key. The key verification
output will be put in `verify` and will be one or more of the
`gnutls_certificate_status_t` enumerated elements bitwise or'd.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_keyring_check_id

-- Function: int gnutls_openpgp_keyring_check_id
(gnutls_openpgp_keyring_t RING, const gnutls_openpgp_keyid_t
KEYID, unsigned int FLAGS)
RING: holds the keyring to check against

KEYID: will hold the keyid to check for.

FLAGS: unused (should be 0)

Check if a given key ID exists in the keyring.

Returns: `GNUTLS_E_SUCCESS` on success (if keyid exists) and a
negative error code on failure.

gnutls_openpgp_keyring_deinit

-- Function: void gnutls_openpgp_keyring_deinit
(gnutls_openpgp_keyring_t KEYRING)
KEYRING: The structure to be initialized

This function will deinitialize a keyring structure.

gnutls_openpgp_keyring_get_cert_count

-- Function: int gnutls_openpgp_keyring_get_cert_count
(gnutls_openpgp_keyring_t RING)
RING: is an OpenPGP key ring

This function will return the number of OpenPGP certificates
present in the given keyring.

Returns: the number of subkeys, or a negative value on error.

gnutls_openpgp_keyring_get_cert

-- Function: int gnutls_openpgp_keyring_get_cert
(gnutls_openpgp_keyring_t RING, unsigned int IDX,
gnutls_openpgp_cert_t * CERT)
RING: Holds the keyring.

IDX: the index of the certificate to export

CERT: An uninitialized `gnutls_openpgp_cert_t` structure

This function will extract an OpenPGP certificate from the given keyring. If the index given is out of range `GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE` will be returned. The returned structure needs to be deinited.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_keyring_import

-- Function: int gnutls_openpgp_keyring_import
(gnutls_openpgp_keyring_t KEYRING, const gnutls_datum_t *
DATA, gnutls_openpgp_cert_fmt_t FORMAT)

KEYRING: The structure to store the parsed key.

DATA: The RAW or BASE64 encoded keyring.

FORMAT: One of `gnutls_openpgp_keyring_fmt` elements.

This function will convert the given RAW or Base64 encoded keyring to the native `gnutls_openpgp_keyring_t` format. The output will be stored in 'keyring'.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_keyring_init

-- Function: int gnutls_openpgp_keyring_init (gnutls_openpgp_keyring_t
* KEYRING)

KEYRING: The structure to be initialized

This function will initialize an keyring structure.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_privkey_deinit

-- Function: void gnutls_openpgp_privkey_deinit
(gnutls_openpgp_privkey_t KEY)

KEY: The structure to be initialized

This function will deinitialize a key structure.

gnutls_openpgp_privkey_export_dsa_raw

```
-- Function: int gnutls_openpgp_privkey_export_dsa_raw
(gnutls_openpgp_privkey_t PKEY, gnutls_datum_t * P,
 gnutls_datum_t * Q, gnutls_datum_t * G, gnutls_datum_t * Y,
 gnutls_datum_t * X)
PKEY: Holds the certificate
```

P: will hold the p

Q: will hold the q

G: will hold the g

Y: will hold the y

X: will hold the x

This function will export the DSA private key's parameters found in the given certificate. The new parameters will be allocated using ``gnutls_malloc()`` and will be stored in the appropriate datum.

**Returns:* ``GNUTLS_E_SUCCESS'` on success, otherwise an error.

**Since:* 2.4.0

```
gnutls_openpgp_privkey_export_rsa_raw
-----
```

```
-- Function: int gnutls_openpgp_privkey_export_rsa_raw
(gnutls_openpgp_privkey_t PKEY, gnutls_datum_t * M,
 gnutls_datum_t * E, gnutls_datum_t * D, gnutls_datum_t * P,
 gnutls_datum_t * Q, gnutls_datum_t * U)
PKEY: Holds the certificate
```

M: will hold the modulus

E: will hold the public exponent

D: will hold the private exponent

P: will hold the first prime (p)

Q: will hold the second prime (q)

U: will hold the coefficient

This function will export the RSA private key's parameters found in the given structure. The new parameters will be allocated using

`gnutls_malloc()' and will be stored in the appropriate datum.

Returns: `GNUTLS_E_SUCCESS' on success, otherwise an error.

Since: 2.4.0

gnutls_openpgp_privkey_export_subkey_dsa_raw

-- Function: int gnutls_openpgp_privkey_export_subkey_dsa_raw
 (gnutls_openpgp_privkey_t PKEY, unsigned int IDX,
 gnutls_datum_t * P, gnutls_datum_t * Q, gnutls_datum_t * G,
 gnutls_datum_t * Y, gnutls_datum_t * X)

PKEY: Holds the certificate

IDX: Is the subkey index

P: will hold the p

Q: will hold the q

G: will hold the g

Y: will hold the y

X: will hold the x

This function will export the DSA private key's parameters found in the given certificate. The new parameters will be allocated using `gnutls_malloc()' and will be stored in the appropriate datum.

Returns: `GNUTLS_E_SUCCESS' on success, otherwise an error.

Since: 2.4.0

gnutls_openpgp_privkey_export_subkey_rsa_raw

-- Function: int gnutls_openpgp_privkey_export_subkey_rsa_raw
 (gnutls_openpgp_privkey_t PKEY, unsigned int IDX,
 gnutls_datum_t * M, gnutls_datum_t * E, gnutls_datum_t * D,
 gnutls_datum_t * P, gnutls_datum_t * Q, gnutls_datum_t * U)

PKEY: Holds the certificate

IDX: Is the subkey index

M: will hold the modulus

E: will hold the public exponent

D: will hold the private exponent

P: will hold the first prime (p)

Q: will hold the second prime (q)

U: will hold the coefficient

This function will export the RSA private key's parameters found in the given structure. The new parameters will be allocated using ``gnutls_malloc()` and will be stored in the appropriate datum.

Returns: ``GNUTLS_E_SUCCESS'` on success, otherwise an error.

Since: 2.4.0

`gnutls_openpgp_privkey_export`

-- Function: `int gnutls_openpgp_privkey_export`
(`gnutls_openpgp_privkey_t KEY`, `gnutls_openpgp_crt_fmt_t`
`FORMAT`, `const char * PASSWORD`, `unsigned int FLAGS`, `void *`
`OUTPUT_DATA`, `size_t * OUTPUT_DATA_SIZE`)
KEY: Holds the key.

FORMAT: One of `gnutls_openpgp_crt_fmt_t` elements.

PASSWORD: the password that will be used to encrypt the key.
(unused for now)

FLAGS: zero for future compatibility

OUTPUT_DATA: will contain the key base64 encoded or raw

OUTPUT_DATA_SIZE: holds the size of `output_data` (and will be replaced by the actual size of parameters)

This function will convert the given key to RAW or Base64 format. If the buffer provided is not long enough to hold the output, then `GNUTLS_E_SHORT_MEMORY_BUFFER` will be returned.

Returns: ``GNUTLS_E_SUCCESS'` on success, or an error code.

Since: 2.4.0

gnutls_openpgp_privkey_get_fingerprint

-- Function: int gnutls_openpgp_privkey_get_fingerprint
(gnutls_openpgp_privkey_t KEY, void * FPR, size_t * FPRLEN)
KEY: the raw data that contains the OpenPGP secret key.

FPR: the buffer to save the fingerprint, must hold at least 20 bytes.

FPRLEN: the integer to save the length of the fingerprint.

Get the fingerprint of the OpenPGP key. Depends on the algorithm, the fingerprint can be 16 or 20 bytes.

Returns: On success, 0 is returned, or an error code.

Since: 2.4.0

gnutls_openpgp_privkey_get_key_id

-- Function: int gnutls_openpgp_privkey_get_key_id
(gnutls_openpgp_privkey_t KEY, gnutls_openpgp_keyid_t KEYID)
KEY: the structure that contains the OpenPGP secret key.

KEYID: the buffer to save the keyid.

Get key-id.

Returns: the 64-bit keyID of the OpenPGP key.

Since: 2.4.0

gnutls_openpgp_privkey_get_pk_algorithm

-- Function: gnutls_pk_algorithm_t
gnutls_openpgp_privkey_get_pk_algorithm (gnutls_openpgp_privkey_t KEY,
unsigned int * BITS)
KEY: is an OpenPGP key

BITS: if bits is non null it will hold the size of the parameters' in bits

This function will return the public key algorithm of an OpenPGP certificate.

If bits is non null, it should have enough size to hold the parameters size in bits. For RSA the bits returned is the modulus. For DSA the bits returned are of the public exponent.

Returns: a member of the `gnutls_pk_algorithm_t` enumeration on success, or a negative value on error.

Since: 2.4.0

gnutls_openpgp_privkey_get_preferred_key_id

-- Function: int gnutls_openpgp_privkey_get_preferred_key_id
(gnutls_openpgp_privkey_t KEY, gnutls_openpgp_keyid_t KEYID)
KEY: the structure that contains the OpenPGP public key.

KEYID: the struct to save the keyid.

Get the preferred key-id for the key.

Returns: the 64-bit preferred keyID of the OpenPGP key, or if it hasn't been set it returns `GNUTLS_E_INVALID_REQUEST`.

gnutls_openpgp_privkey_get_revoked_status

-- Function: int gnutls_openpgp_privkey_get_revoked_status
(gnutls_openpgp_privkey_t KEY)
KEY: the structure that contains the OpenPGP private key.

Get revocation status of key.

Returns: true (1) if the key has been revoked, or false (0) if it has not, or a negative value indicates an error.

Since: 2.4.0

gnutls_openpgp_privkey_get_subkey_count

-- Function: int gnutls_openpgp_privkey_get_subkey_count
(gnutls_openpgp_privkey_t KEY)
KEY: is an OpenPGP key

This function will return the number of subkeys present in the given OpenPGP certificate.

Returns: the number of subkeys, or a negative value on error.

Since: 2.4.0

gnutls_openpgp_privkey_get_subkey_creation_time

-- Function: time_t gnutls_openpgp_privkey_get_subkey_creation_time

(gnutls_openpgp_privkey_t KEY, unsigned int IDX)

KEY: the structure that contains the OpenPGP private key.

IDX: the subkey index

Get subkey creation time.

Returns: the timestamp when the OpenPGP key was created.

Since: 2.4.0

gnutls_openpgp_privkey_get_subkey_expiration_time

-- Function: time_t gnutls_openpgp_privkey_get_subkey_expiration_time

(gnutls_openpgp_privkey_t KEY, unsigned int IDX)

KEY: the structure that contains the OpenPGP private key.

IDX: the subkey index

Get subkey expiration time. A value of '0' means that the key doesn't expire at all.

Returns: the time when the OpenPGP key expires.

Since: 2.4.0

gnutls_openpgp_privkey_get_subkey_fingerprint

-- Function: int gnutls_openpgp_privkey_get_subkey_fingerprint

(gnutls_openpgp_privkey_t KEY, unsigned int IDX, void * FPR,
size_t * FPRLLEN)

KEY: the raw data that contains the OpenPGP secret key.

IDX: the subkey index

FPR: the buffer to save the fingerprint, must hold at least 20 bytes.

FPRLLEN: the integer to save the length of the fingerprint.

Get the fingerprint of an OpenPGP subkey. Depends on the algorithm, the fingerprint can be 16 or 20 bytes.

Returns: On success, 0 is returned, or an error code.

Since: 2.4.0

gnutls_openpgp_privkey_get_subkey_idx

-- Function: int gnutls_openpgp_privkey_get_subkey_idx
(gnutls_openpgp_privkey_t KEY, const gnutls_openpgp_keyid_t
KEYID)

KEY: the structure that contains the OpenPGP private key.

KEYID: the keyid.

Get index of subkey.

Returns: the index of the subkey or a negative error value.

Since: 2.4.0

gnutls_openpgp_privkey_get_subkey_id

-- Function: int gnutls_openpgp_privkey_get_subkey_id
(gnutls_openpgp_privkey_t KEY, unsigned int IDX,
gnutls_openpgp_keyid_t KEYID)

KEY: the structure that contains the OpenPGP secret key.

IDX: the subkey index

KEYID: the buffer to save the keyid.

Get the key-id for the subkey.

Returns: the 64-bit keyID of the OpenPGP key.

Since: 2.4.0

gnutls_openpgp_privkey_get_subkey_pk_algorithm

-- Function: gnutls_pk_algorithm_t
gnutls_openpgp_privkey_get_subkey_pk_algorithm
(gnutls_openpgp_privkey_t KEY, unsigned int IDX, unsigned int

* BITS)

KEY: is an OpenPGP key

IDX: is the subkey index

BITS: if bits is non null it will hold the size of the parameters' in bits

This function will return the public key algorithm of a subkey of an OpenPGP certificate.

If bits is non null, it should have enough size to hold the parameters size in bits. For RSA the bits returned is the modulus. For DSA the bits returned are of the public exponent.

Returns: a member of the `gnutls_pk_algorithm_t` enumeration on success, or a negative value on error.

Since: 2.4.0

gnutls_openpgp_privkey_get_subkey_revoked_status

-- Function: int gnutls_openpgp_privkey_get_subkey_revoked_status

(gnutls_openpgp_privkey_t KEY, unsigned int IDX)

KEY: the structure that contains the OpenPGP private key.

IDX: is the subkey index

Get revocation status of key.

Returns: true (1) if the key has been revoked, or false (0) if it has not, or a negative value indicates an error.

Since: 2.4.0

gnutls_openpgp_privkey_import

-- Function: int gnutls_openpgp_privkey_import

(gnutls_openpgp_privkey_t KEY, const gnutls_datum_t * DATA,

gnutls_openpgp crt_fmt_t FORMAT, const char * PASSWORD,

unsigned int FLAGS)

KEY: The structure to store the parsed key.

DATA: The RAW or BASE64 encoded key.

FORMAT: One of `gnutls_openpgp crt_fmt_t` elements.

PASSWORD: not used for now

FLAGS: should be zero

This function will convert the given RAW or Base64 encoded key to the native gnutls_openpgp_privkey_t format. The output will be stored in 'key'.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_privkey_init

-- Function: int gnutls_openpgp_privkey_init (gnutls_openpgp_privkey_t
* KEY)

KEY: The structure to be initialized

This function will initialize an OpenPGP key structure.

Returns: `GNUTLS_E_SUCCESS` on success, or an error code.

gnutls_openpgp_privkey_set_preferred_key_id

-- Function: int gnutls_openpgp_privkey_set_preferred_key_id
(gnutls_openpgp_privkey_t KEY, const gnutls_openpgp_keyid_t
KEYID)

KEY: the structure that contains the OpenPGP public key.

KEYID: the selected keyid

This allows setting a preferred key id for the given certificate.

This key will be used by functions that involve key handling.

Returns: On success, 0 is returned, or an error code.

gnutls_openpgp_privkey_sign_hash

-- Function: int gnutls_openpgp_privkey_sign_hash
(gnutls_openpgp_privkey_t KEY, const gnutls_datum_t * HASH,
gnutls_datum_t * SIGNATURE)

KEY: Holds the key

HASH: holds the data to be signed

SIGNATURE: will contain newly allocated signature

This function will sign the given hash using the private key. You should use `gnutls_openpgp_privkey_set_subkey()` before calling this function to set the subkey to use.

***Returns:** On success, `GNUTLS_E_SUCCESS` is returned, otherwise a negative error value.

gnutls_openpgp_set_rcv_key_function

-- Function: void gnutls_openpgp_set_rcv_key_function
(gnutls_session_t SESSION, gnutls_openpgp_rcv_key_func FUNC)
SESSION: a TLS session

FUNC: the callback

This function will set a key retrieval function for OpenPGP keys. This callback is only useful in server side, and will be used if the peer sent a key fingerprint instead of a full key.

File: gnutls.info, Node: TLS Inner Application (TLS/IA) functions, Next: Error codes and descriptions, Prev: OpenPGP functions, Up: Function reference

9.5 TLS Inner Application (TLS/IA) Functions

=====

The following functions are used for TLS Inner Application (TLS/IA). Their prototypes lie in `gnutls/extra.h`. You need to link with `libgnutls-extra` to be able to use these functions (*note GnuTLS-extra functions:).

The typical control flow in an TLS/IA client (that would not require an Application Phase for resumed sessions) would be similar to the following:

```
int client_avp (gnutls_session_t *session, void *ptr,
               const char *last, size_t lastlen,
               char **new, size_t *newlen)
{
...
}
...
int main ()
{
    gnutls_ia_client_credentials_t iacred;
...
}
```

```

gnutls_init (&session, GNUTLS_CLIENT);
...
/* Enable TLS/IA. */
gnutls_ia_allocate_client_credentials(&iacred);
gnutls_ia_set_client_avp_function(iacred, client_avp);
gnutls_credentials_set (session, GNUTLS_CRD_IA, iacred);
...
ret = gnutls_handshake (session);
// Error handling...
...
if (gnutls_ia_handshake_p (session))
{
ret = gnutls_ia_handshake (session);
// Error handling...
}
...

```

See below for detailed descriptions of all the functions used above.

The function ``client_avp'` would have to be implemented by your application. The function is responsible for handling the AVP data. See ``gnutls_ia_set_client_avp_function'` below for more information on how that function should be implemented.

The control flow in a typical server is similar to the above, use ``gnutls_ia_server_credentials_t'` instead of ``gnutls_ia_client_credentials_t'`, and replace the call to the client functions with the corresponding server functions.

`gnutls_ia_allocate_client_credentials`

```

-- Function: int gnutls_ia_allocate_client_credentials
(gnutls_ia_client_credentials_t * SC)
SC: is a pointer to a `gnutls_ia_server_credentials_t' structure.

```

This structure is complex enough to manipulate directly thus this helper function is provided in order to allocate it.

Adding this credential to a session will enable TLS/IA, and will require an Application Phase after the TLS handshake (if the server support TLS/IA). Use ``gnutls_ia_require_inner_phase()'` to toggle the TLS/IA mode.

Returns: On success, ``GNUTLS_E_SUCCESS'` (0) is returned, otherwise an error code is returned.

`gnutls_ia_allocate_server_credentials`

-- Function: int gnutls_ia_allocate_server_credentials
(gnutls_ia_server_credentials_t * SC)
SC: is a pointer to a `gnutls_ia_server_credentials_t' structure.

This structure is complex enough to manipulate directly thus this helper function is provided in order to allocate it.

Adding this credential to a session will enable TLS/IA, and will require an Application Phase after the TLS handshake (if the client support TLS/IA). Use `gnutls_ia_require_inner_phase()' to toggle the TLS/IA mode.

Returns: On success, `GNUTLS_E_SUCCESS' (0) is returned, otherwise an error code is returned.

gnutls_ia_enable

-- Function: void gnutls_ia_enable (gnutls_session_t SESSION, int
ALLOW_SKIP_ON_RESUME)
SESSION: is a `gnutls_session_t' structure.

ALLOW_SKIP_ON_RESUME: non-zero if local party allows to skip the TLS/IA application phases for a resumed session.

Specify whether we must advertise support for the TLS/IA extension during the handshake.

At the client side, we always advertise TLS/IA if gnutls_ia_enable was called before the handshake; at the server side, we also require that the client has advertised that it wants to run TLS/IA before including the advertisement, as required by the protocol.

Similarly, at the client side we always advertise that we allow TLS/IA to be skipped for resumed sessions if `allow_skip_on_resume' is non-zero; at the server side, we also require that the session is indeed resumable and that the client has also advertised that it allows TLS/IA to be skipped for resumed sessions.

After the TLS handshake, call `gnutls_ia_handshake_p()' to find out whether both parties agreed to do a TLS/IA handshake, before calling `gnutls_ia_handshake()' or one of the lower level gnutls_ia_* functions.

gnutls_ia_endphase_send

-- Function: int gnutls_ia_endphase_send (gnutls_session_t SESSION,
int FINAL_P)

SESSION: is a `gnutls_session_t' structure.

FINAL_P: Set iff this should signal the final phase.

Send a TLS/IA end phase message.

In the client, this should only be used to acknowledge an end phase message sent by the server.

In the server, this can be called instead of `gnutls_ia_send()' if the server wishes to end an application phase.

Return value: Return 0 on success, or an error code.

gnutls_ia_extract_inner_secret

-- Function: void gnutls_ia_extract_inner_secret (gnutls_session_t
SESSION, char * BUFFER)

SESSION: is a `gnutls_session_t' structure.

BUFFER: pre-allocated buffer to hold 48 bytes of inner secret.

Copy the 48 bytes large inner secret into the specified buffer

This function is typically used after the TLS/IA handshake has concluded. The TLS/IA inner secret can be used as input to a PRF to derive session keys. Do not use the inner secret directly as a session key, because for a resumed session that does not include an application phase, the inner secret will be identical to the inner secret in the original session. It is important to include, for example, the client and server randomness when deriving a session key from the inner secret.

gnutls_ia_free_client_credentials

-- Function: void gnutls_ia_free_client_credentials
(gnutls_ia_client_credentials_t SC)

SC: is a `gnutls_ia_client_credentials_t' structure.

This structure is complex enough to manipulate directly thus this helper function is provided in order to free (deallocate) it.

gnutls_ia_free_server_credentials

-- Function: void gnutls_ia_free_server_credentials
(gnutls_ia_server_credentials_t SC)
SC: is a `gnutls_ia_server_credentials_t' structure.

This structure is complex enough to manipulate directly thus this helper function is provided in order to free (deallocate) it.

gnutls_ia_generate_challenge

-- Function: int gnutls_ia_generate_challenge (gnutls_session_t
SESSION, size_t BUFFER_SIZE, char * BUFFER)
SESSION: is a `gnutls_session_t' structure.

BUFFER_SIZE: size of output buffer.

BUFFER: pre-allocated buffer to contain `buffer_size' bytes of output.

Generate an application challenge that the client cannot control or predict, based on the TLS/IA inner secret.

Return value: Returns 0 on success, or an negative error code.

gnutls_ia_get_client_avp_ptr

-- Function: void * gnutls_ia_get_client_avp_ptr
(gnutls_ia_client_credentials_t CRED)
CRED: is a `gnutls_ia_client_credentials_t' structure.

Returns the pointer that will be provided to the TLS/IA callback function as the first argument.

Returns: The client callback data pointer.

gnutls_ia_get_server_avp_ptr

-- Function: void * gnutls_ia_get_server_avp_ptr
(gnutls_ia_server_credentials_t CRED)
CRED: is a `gnutls_ia_client_credentials_t' structure.

Returns the pointer that will be provided to the TLS/IA callback function as the first argument.

Returns: The server callback data pointer.

gnutls_ia_handshake_p

-- Function: int gnutls_ia_handshake_p (gnutls_session_t SESSION)
SESSION: is a `gnutls_session_t' structure.

Predicate to be used after `gnutls_handshake()' to decide whether to invoke `gnutls_ia_handshake()'. Usable by both clients and servers.

Return value: non-zero if TLS/IA handshake is expected, zero otherwise.

gnutls_ia_handshake

-- Function: int gnutls_ia_handshake (gnutls_session_t SESSION)
SESSION: is a `gnutls_session_t' structure.

Perform a TLS/IA handshake. This should be called after `gnutls_handshake()' iff `gnutls_ia_handshake_p()'.

Returns: On success, `GNUTLS_E_SUCCESS' (zero) is returned, otherwise an error code is returned.

gnutls_ia_permute_inner_secret

-- Function: int gnutls_ia_permute_inner_secret (gnutls_session_t SESSION, size_t SESSION_KEYS_SIZE, const char * SESSION_KEYS)
SESSION: is a `gnutls_session_t' structure.

SESSION_KEYS_SIZE: Size of generated session keys (0 if none).

SESSION_KEYS: Generated session keys, used to permute inner secret (NULL if none).

Permute the inner secret using the generated session keys.

This can be called in the TLS/IA AVP callback to mix any generated session keys with the TLS/IA inner secret.

Return value: Return zero on success, or a negative error code.

gnutls_ia_rcv

-- Function: `ssize_t gnutls_ia_recv (gnutls_session_t SESSION, char *`

`DATA, size_t SIZEOFDATA)`

SESSION: is a ``gnutls_session_t'` structure.

DATA: the buffer that the data will be read into, must hold ≥ 12 bytes.

SIZEOFDATA: the number of requested bytes, must be ≥ 12 .

Receive TLS/IA data. This function has the similar semantics with ``recv()`. The only difference is that it accepts a GnuTLS session, and uses different error codes.

If the server attempt to finish an application phase, this function will return ``GNUTLS_E_WARNING_IA_IPHF_RECEIVED'` or ``GNUTLS_E_WARNING_IA_FPHF_RECEIVED'`. The caller should then invoke ``gnutls_ia_verify_endphase()`, and if it runs the client side, also send an endphase message of its own using `gnutls_ia_endphase_send`.

If EINTR is returned by the internal push function (the default is ``code'{'recv()'}`) then `GNUTLS_E_INTERRUPTED` will be returned. If `GNUTLS_E_INTERRUPTED` or `GNUTLS_E_AGAIN` is returned, you must call this function again, with the same parameters; alternatively you could provide a NULL pointer for data, and 0 for size.

Returns: The number of bytes received. A negative error code is returned in case of an error. The ``GNUTLS_E_WARNING_IA_IPHF_RECEIVED'` and ``GNUTLS_E_WARNING_IA_FPHF_RECEIVED'` errors are returned when an application phase finished message has been sent by the server.

`gnutls_ia_send`

-- Function: `ssize_t gnutls_ia_send (gnutls_session_t SESSION, const`

`char * DATA, size_t SIZEOFDATA)`

SESSION: is a ``gnutls_session_t'` structure.

DATA: contains the data to send

SIZEOFDATA: is the length of the data

Send TLS/IA application payload data. This function has the similar semantics with ``send()`. The only difference is that it accepts a GnuTLS session, and uses different error codes.

The TLS/IA protocol is synchronous, so you cannot send more than one packet at a time. The client always send the first packet.

To finish an application phase in the server, use ``gnutls_ia_endphase_send()`'. The client cannot end an application phase unilaterally; rather, a client is required to respond with an endphase of its own if `gnutls_ia_rcv` indicates that the server has sent one.

If the `EINTR` is returned by the internal push function (the default is ``send()`') then ``GNUTLS_E_INTERRUPTED'` will be returned. If ``GNUTLS_E_INTERRUPTED'` or ``GNUTLS_E_AGAIN'` is returned, you must call this function again, with the same parameters; alternatively you could provide a ``NULL'` pointer for data, and 0 for size.

Returns: The number of bytes sent, or a negative error code.

`gnutls_ia_set_client_avp_function`

-- Function: void `gnutls_ia_set_client_avp_function`
 (`gnutls_ia_client_credentials_t` CRED, `gnutls_ia_avp_func`
 AVP_FUNC)
CRED: is a ``gnutls_ia_client_credentials_t'` structure.

AVP_FUNC: is the callback function

Set the TLS/IA AVP callback handler used for the session.

The AVP callback is called to process AVPs received from the server, and to get a new AVP to send to the server.

The callback's function form is: `int (*avp_func) (gnutls_session_t session, void *ptr, const char *last, size_t lastlen, char **next, size_t *nextlen);`

The ``session'` parameter is the ``gnutls_session_t'` structure corresponding to the current session. The ``ptr'` parameter is the application hook pointer, set through ``gnutls_ia_set_client_avp_ptr()`'. The AVP received from the server is present in ``last'` of ``lastlen'` size, which will be ``NULL'` on the first invocation. The newly allocated output AVP to send to the server should be placed in ``*next'` of ``*nextlen'` size.

The callback may invoke ``gnutls_ia_permute_inner_secret()`' to mix any generated session keys with the TLS/IA inner secret.

Return 0 (``GNUTLS_IA_APPLICATION_PAYLOAD'`) on success, or a negative error code to abort the TLS/IA handshake.

Note that the callback must use allocate the `next` parameter using `gnutls_malloc()`, because it is released via `gnutls_free()` by the TLS/IA handshake function.

`gnutls_ia_set_client_avp_ptr`

-- Function: void gnutls_ia_set_client_avp_ptr
(gnutls_ia_client_credentials_t CRED, void * PTR)
CRED: is a `gnutls_ia_client_credentials_t` structure.

PTR: is the pointer

Sets the pointer that will be provided to the TLS/IA callback function as the first argument.

`gnutls_ia_set_server_avp_function`

-- Function: void gnutls_ia_set_server_avp_function
(gnutls_ia_server_credentials_t CRED, gnutls_ia_avp_func
AVP_FUNC)
CRED: is a `gnutls_ia_server_credentials_t` structure.

Set the TLS/IA AVP callback handler used for the session.

The callback's function form is: int (*avp_func) (gnutls_session_t session, void *ptr, const char *last, size_t lastlen, char **next, size_t *nextlen);

The `session` parameter is the `gnutls_session_t` structure corresponding to the current session. The `ptr` parameter is the application hook pointer, set through `gnutls_ia_set_server_avp_ptr()`. The AVP received from the client is present in `last` of `lastlen` size. The newly allocated output AVP to send to the client should be placed in `*next` of `*nextlen` size.

The AVP callback is called to process incoming AVPs from the client, and to get a new AVP to send to the client. It can also be used to instruct the TLS/IA handshake to do go into the Intermediate or Final phases. It return a negative error code, or a `gnutls_ia_apptype_t` message type.

The callback may invoke `gnutls_ia_permute_inner_secret()` to mix any generated session keys with the TLS/IA inner secret.

Specifically, return `GNUTLS_IA_APPLICATION_PAYLOAD` (0) to send

another AVP to the client, return

`GNUTLS_IA_INTERMEDIATE_PHASE_FINISHED' (1) to indicate that an IntermediatePhaseFinished message should be sent, and return
`GNUTLS_IA_FINAL_PHASE_FINISHED' (2) to indicate that an FinalPhaseFinished message should be sent. In the last two cases, the contents of the `next' and `nextlen' parameter is not used.

Note that the callback must use allocate the `next' parameter using
`gnutls_malloc()', because it is released via `gnutls_free()' by the TLS/IA handshake function.

gnutls_ia_set_server_avp_ptr

-- Function: void gnutls_ia_set_server_avp_ptr
(gnutls_ia_server_credentials_t CRED, void * PTR)
CRED: is a `gnutls_ia_client_credentials_t' structure.

PTR: is the pointer

Sets the pointer that will be provided to the TLS/IA callback function as the first argument.

gnutls_ia_verify_endphase

-- Function: int gnutls_ia_verify_endphase (gnutls_session_t SESSION,
const char * CHECKSUM)
SESSION: is a `gnutls_session_t' structure.

CHECKSUM: 12-byte checksum data, received from `gnutls_ia_recv()'.

Verify TLS/IA end phase checksum data. If verification fails, the
`GNUTLS_A_INNER_APPLICATION_VERIFICATION' alert is sent to the other side.

This function is called when `gnutls_ia_recv()' return
`GNUTLS_E_WARNING_IA_IPHF_RECEIVED' or
`GNUTLS_E_WARNING_IA_FPHF_RECEIVED'.

Return value: Return 0 on successful verification, or an error code. If the checksum verification of the end phase message fails, `GNUTLS_E_IA_VERIFY_FAILED' is returned.

File: gnutls.info, Node: Error codes and descriptions, Prev: TLS Inner Application (TLS/IA) functions, Up: Function reference

9.6 Error Codes and Descriptions

=====

The error codes used throughout the library are described below. The return code ``GNUTLS_E_SUCCESS'` indicate successful operation, and is guaranteed to have the value 0, so you can use it in logical expressions.

``GNUTLS_E_AGAIN:'`

Resource temporarily unavailable, try again.

``GNUTLS_E_ASN1_DER_ERROR:'`

ASN1 parser: Error in DER parsing.

``GNUTLS_E_ASN1_DER_OVERFLOW:'`

ASN1 parser: Overflow in DER parsing.

``GNUTLS_E_ASN1_ELEMENT_NOT_FOUND:'`

ASN1 parser: Element was not found.

``GNUTLS_E_ASN1_GENERIC_ERROR:'`

ASN1 parser: Generic parsing error.

``GNUTLS_E_ASN1_IDENTIFIER_NOT_FOUND:'`

ASN1 parser: Identifier was not found

``GNUTLS_E_ASN1_SYNTAX_ERROR:'`

ASN1 parser: Syntax error.

``GNUTLS_E_ASN1_TAG_ERROR:'`

ASN1 parser: Error in TAG.

``GNUTLS_E_ASN1_TAG_IMPLICIT:'`

ASN1 parser: error in implicit tag

``GNUTLS_E_ASN1_TYPE_ANY_ERROR:'`

ASN1 parser: Error in type 'ANY'.

``GNUTLS_E_ASN1_VALUE_NOT_FOUND:'`

ASN1 parser: Value was not found.

``GNUTLS_E_ASN1_VALUE_NOT_VALID:'`

ASN1 parser: Value is not valid.

``GNUTLS_E_BASE64_DECODING_ERROR:'`

Base64 decoding error.

``GNUTLS_E_BASE64_ENCODING_ERROR:'`

Base64 encoding error.

`GNUTLS_E_BASE64_UNEXPECTED_HEADER_ERROR:'

Base64 unexpected header error.

`GNUTLS_E_CERTIFICATE_ERROR:'

Error in the certificate.

`GNUTLS_E_CERTIFICATE_KEY_MISMATCH:'

The certificate and the given key do not match.

`GNUTLS_E_COMPRESSION_FAILED:'

Compression of the TLS record packet has failed.

`GNUTLS_E_CONSTRAINT_ERROR:'

Some constraint limits were reached.

`GNUTLS_E_CRYPTO_ALREADY_REGISTERED:'

There is already a crypto algorithm with lower priority.

`GNUTLS_E_DB_ERROR:'

Error in Database backend.

`GNUTLS_E_DECOMPRESSION_FAILED:'

Decompression of the TLS record packet has failed.

`GNUTLS_E_DECRYPTION_FAILED:'

Decryption has failed.

`GNUTLS_E_DH_PRIME_UNACCEPTABLE:'

The Diffie-Hellman prime sent by the server is not acceptable (not long enough).

`GNUTLS_E_ENCRYPTION_FAILED:'

Encryption has failed.

`GNUTLS_E_ERROR_IN_FINISHED_PACKET:'

An error was encountered at the TLS Finished packet calculation.

`GNUTLS_E_EXPIRED:'

The requested session has expired.

`GNUTLS_E_FATAL_ALERT_RECEIVED:'

A TLS fatal alert has been received.

`GNUTLS_E_FILE_ERROR:'

Error while reading file.

`GNUTLS_E_GOT_APPLICATION_DATA:'
TLS Application data were received, while expecting handshake data.

`GNUTLS_E_HANDSHAKE_TOO_LARGE:'
The handshake data size is too large (DoS?), check
gnutls_handshake_set_max_packet_length().

`GNUTLS_E_HASH_FAILED:'
Hashing has failed.

`GNUTLS_E_IA_VERIFY_FAILED:'
Verifying TLS/IA phase checksum failed

`GNUTLS_E_ILLEGAL_SRP_USERNAME:'
The SRP username supplied is illegal.

`GNUTLS_E_INCOMPATIBLE_GCRYPT_LIBRARY:'
The gcrypt library version is too old.

`GNUTLS_E_INCOMPATIBLE_LIBTASN1_LIBRARY:'
The tasn1 library version is too old.

`GNUTLS_E_INIT_LIBEXTRA:'
The initialization of GnuTLS-extra has failed.

`GNUTLS_E_INSUFFICIENT_CREDENTIALS:'
Insufficient credentials for that request.

`GNUTLS_E_INTERNAL_ERROR:'
GnuTLS internal error.

`GNUTLS_E_INTERRUPTED:'
Function was interrupted.

`GNUTLS_E_INVALID_PASSWORD:'
The given password contains invalid characters.

`GNUTLS_E_INVALID_REQUEST:'
The request is invalid.

`GNUTLS_E_INVALID_SESSION:'
The specified session has been invalidated for some reason.

`GNUTLS_E_KEY_USAGE_VIOLATION:'
Key usage violation in certificate has been detected.

`GNUTLS_E_LARGE_PACKET:'
A large TLS record packet was received.

`GNUTLS_E_LIBRARY_VERSION_MISMATCH:'
The GnuTLS library version does not match the GnuTLS-extra library version.

`GNUTLS_E_LZO_INIT_FAILED:'
The initialization of LZO has failed.

`GNUTLS_E_MAC_VERIFY_FAILED:'
The Message Authentication Code verification failed.

`GNUTLS_E_MEMORY_ERROR:'
Internal error in memory allocation.

`GNUTLS_E_MPI_PRINT_FAILED:'
Could not export a large integer.

`GNUTLS_E_MPI_SCAN_FAILED:'
The scanning of a large integer has failed.

`GNUTLS_E_NO_CERTIFICATE_FOUND:'
The peer did not send any certificate.

`GNUTLS_E_NO_CIPHER_SUITES:'
No supported cipher suites have been found.

`GNUTLS_E_NO_COMPRESSION_ALGORITHMS:'
No supported compression algorithms have been found.

`GNUTLS_E_NO_TEMPORARY_DH_PARAMS:'
No temporary DH parameters were found.

`GNUTLS_E_NO_TEMPORARY_RSA_PARAMS:'
No temporary RSA parameters were found.

`GNUTLS_E_OPENPGP_FINGERPRINT_UNSUPPORTED:'
The OpenPGP fingerprint is not supported.

`GNUTLS_E_OPENPGP_GETKEY_FAILED:'
Could not get OpenPGP key.

`GNUTLS_E_OPENPGP_KEYRING_ERROR:'
Error loading the keyring.

`GNUTLS_E_OPENPGP_SUBKEY_ERROR:'
Could not find OpenPGP subkey.

`GNUTLS_E_OPENPGP_UID_REVOKED:'

The OpenPGP User ID is revoked.

`GNUTLS_E_PKCS1_WRONG_PAD:'

Wrong padding in PKCS1 packet.

`GNUTLS_E_PK_DECRYPTION_FAILED:'

Public key decryption has failed.

`GNUTLS_E_PK_ENCRYPTION_FAILED:'

Public key encryption has failed.

`GNUTLS_E_PK_SIGN_FAILED:'

Public key signing has failed.

`GNUTLS_E_PK_SIG_VERIFY_FAILED:'

Public key signature verification has failed.

`GNUTLS_E_PULL_ERROR:'

Error in the pull function.

`GNUTLS_E_PUSH_ERROR:'

Error in the push function.

`GNUTLS_E_RANDOM_FAILED:'

Failed to acquire random data.

`GNUTLS_E_RECEIVED_ILLEGAL_EXTENSION:'

An illegal TLS extension was received.

`GNUTLS_E_RECEIVED_ILLEGAL_PARAMETER:'

An illegal parameter has been received.

`GNUTLS_E_RECORD_LIMIT_REACHED:'

The upper limit of record packet sequence numbers has been reached. Wow!

`GNUTLS_E_REHANDSHAKE:'

Rehandshake was requested by the peer.

`GNUTLS_E_REQUESTED_DATA_NOT_AVAILABLE:'

The requested data were not available.

`GNUTLS_E_SHORT_MEMORY_BUFFER:'

The given memory buffer is too short to hold parameters.

`GNUTLS_E_SRP_PWD_ERROR:'

Error in password file.

`GNUTLS_E_SRP_PWD_PARSING_ERROR:'
Parsing error in password file.

`GNUTLS_E_SUCCESS:'
Success.

`GNUTLS_E_TOO_MANY_EMPTY_PACKETS:'
Too many empty record packets have been received.

`GNUTLS_E_UNEXPECTED_HANDSHAKE_PACKET:'
An unexpected TLS handshake packet was received.

`GNUTLS_E_UNEXPECTED_PACKET:'
An unexpected TLS packet was received.

`GNUTLS_E_UNEXPECTED_PACKET_LENGTH:'
A TLS packet with unexpected length was received.

`GNUTLS_E_UNKNOWN_ALGORITHM:'
The specified algorithm or protocol is unknown.

`GNUTLS_E_UNKNOWN_CIPHER_SUITE:'
Could not negotiate a supported cipher suite.

`GNUTLS_E_UNKNOWN_CIPHER_TYPE:'
The cipher type is unsupported.

`GNUTLS_E_UNKNOWN_COMPRESSION_ALGORITHM:'
Could not negotiate a supported compression method.

`GNUTLS_E_UNKNOWN_HASH_ALGORITHM:'
The hash algorithm is unknown.

`GNUTLS_E_UNKNOWN_PKCS_BAG_TYPE:'
The PKCS structure's bag type is unknown.

`GNUTLS_E_UNKNOWN_PKCS_CONTENT_TYPE:'
The PKCS structure's content type is unknown.

`GNUTLS_E_UNKNOWN_PK_ALGORITHM:'
An unknown public key algorithm was encountered.

`GNUTLS_E_UNSUPPORTED_CERTIFICATE_TYPE:'
The certificate type is not supported.

`GNUTLS_E_UNSUPPORTED_VERSION_PACKET:'
A record packet with illegal version was received.

`GNUTLS_E_UNWANTED_ALGORITHM:'

An algorithm that is not enabled was negotiated.

`GNUTLS_E_WARNING_ALERT_RECEIVED:'

A TLS warning alert has been received.

`GNUTLS_E_WARNING_IA_FPHF_RECEIVED:'

Received a TLS/IA Final Phase Finished message

`GNUTLS_E_WARNING_IA_IPHF_RECEIVED:'

Received a TLS/IA Intermediate Phase Finished message

`GNUTLS_E_X509_UNKNOWN_SAN:'

Unknown Subject Alternative name in X.509 certificate.

`GNUTLS_E_X509_UNSUPPORTED_ATTRIBUTE:'

The certificate has unsupported attributes.

`GNUTLS_E_X509_UNSUPPORTED_CRITICAL_EXTENSION:'

Unsupported critical extension in X.509 certificate.

`GNUTLS_E_X509_UNSUPPORTED_OID:'

The OID is not supported.

TLS_RSA_CAMELLIA_256_CBC_SHA1	0x00 0x84	TLS1.0

Available certificate types:

* X.509

* OPENPGP

Available protocols:

* SSL3.0

* TLS1.0

* TLS1.1

* TLS1.2

Available ciphers:

* AES-256-CBC

* AES-128-CBC

* 3DES-CBC

* DES-CBC

* ARCFOUR-128

* ARCFOUR-40

* RC2-40

* CAMELLIA-256-CBC

* CAMELLIA-128-CBC

* NULL

Available MAC algorithms:

* SHA1

* MD5

* SHA256

* SHA384

* SHA512

* MD2

* RIPEMD160

* NULL

Available key exchange methods:

* ANON-DH

* RSA

* RSA-EXPORT

* DHE-RSA

* DHE-DSS

* SRP-DSS

* SRP-RSA

* SRP

* PSK

* DHE-PSK

Available public key algorithms:

* RSA

* DSA

Available public key signature algorithms:

* RSA-SHA

* RSA-SHA256

* RSA-SHA384

* RSA-SHA512

* RSA-RMD160

* DSA-SHA

* RSA-MD5

* RSA-MD2

Available compression methods:

* DEFLATE

* NULL

Some additional information regarding some of the algorithms:

`RSA'

RSA is public key cryptosystem designed by Ronald Rivest, Adi Shamir and Leonard Adleman. It can be used with any hash functions.

`DSA'

DSA is the USA's Digital Signature Standard. It uses only the SHA-1 hash algorithm.

`MD2'

MD2 is a cryptographic hash algorithm designed by Ron Rivest. It is optimized for 8-bit processors. Outputs 128 bits of data.

There are no known weaknesses of this algorithm but since this

algorithm is rarely used and not really studied it should not be used today.

`MD5'

MD5 is a cryptographic hash algorithm designed by Ron Rivest. Outputs 128 bits of data. It is considered to be broken.

`SHA-1'

SHA is a cryptographic hash algorithm designed by NSA. Outputs 160 bits of data. It is also considered to be broken, though no practical attacks have been found.

`RMD160'

RIPEMD is a cryptographic hash algorithm developed in the framework of the EU project RIPE. Outputs 160 bits of data.

11 Guile Bindings

This chapter describes the GNU Guile (<http://www.gnu.org/software/guile/>) Scheme programming interface to GnuTLS. The reader is assumed to have basic knowledge of the protocol and library. Details missing from this chapter may be found in **note* the C API reference: *Function reference*.

At this stage, not all the C functions are available from Scheme, but a large subset thereof is available.

* Menu:

- * *Guile Preparations*:: Note on installation and environment.
- * *Guile API Conventions*:: Naming conventions and other idiosyncrasies.
- * *Guile Examples*:: Quick start.
- * *Guile Reference*:: The Scheme GnuTLS programming interface.

File: [gnutls.info](#), Node: [Guile Preparations](#), Next: [Guile API Conventions](#), Up: [Guile Bindings](#)

11.1 Guile Preparations

=====

The GnuTLS Guile bindings are by default installed under the GnuTLS installation directory (e.g., typically

`~/usr/local/share/guile/site/'). Normally Guile will not find the module there without help. You may experience something like this:`

```
$ guile
guile> (use-modules (gnutls))
<unnamed port>: no code for module (gnutls)
guile>
```

There are two ways to solve this. The first is to make sure that when building GnuTLS, the Guile bindings will be installed in the same place where Guile looks. You may do this by using the `--with-guile-site-dir'` parameter as follows:

```
$ ./configure --with-guile-site-dir=no
```

This will instruct GnuTLS to attempt to install the Guile bindings where Guile will look for them. It will use ``guile-config info pkgdatadir'` to learn the path to use.

If Guile was installed into `~/usr'`, you may also install GnuTLS using the same prefix:

```
$ ./configure --prefix=/usr
```

If you want to specify the path to install the Guile bindings you can also specify the path directly:

```
$ ./configure --with-guile-site-dir=/opt/guile/share/guile/site
```

The second solution requires some more work but may be easier to use if you do not have system administrator rights to your machine. You need to instruct Guile so that it finds the GnuTLS Guile bindings. Either use the ``GUILE_LOAD_PATH'` environment variable as follows:

```
$ GUILE_LOAD_PATH="/usr/local/share/guile/site:$GUILE_LOAD_PATH" guile
guile> (use-modules (gnutls))
guile>
```

Alternatively, you can modify Guile's ``%load-path'` variable (*note Guile's run-time options: (guile)Build Config.).

At this point, you might get an error regarding ``libguile-gnutls-v-0'` similar to:

```
gnutls.scm:361:1: In procedure dynamic-link in expression (load-extension "libguile-gnutls-v-0"
"scm_init_gnutls"):
gnutls.scm:361:1: file: "libguile-gnutls-v-0", message: "libguile-gnutls-v-0.so: cannot open shared object file: No
such file or directory"
```

In this case, you will need to modify the run-time linker path, for example as follows:

```
$ LD_LIBRARY_PATH=/usr/local/lib GUILE_LOAD_PATH=/usr/local/share/guile/site guile
guile> (use-modules (gnutls))
guile>
```

File: gnutls.info, Node: Guile API Conventions, Next: Guile Examples, Prev: Guile Preparations, Up: Guile Bindings

11.2 Guile API Conventions

=====

This chapter details the conventions used by Guile API, as well as specificities of the mapping of the C API to Scheme.

* Menu:

- * Enumerates and Constants:: Representation of C-side constants.
- * Procedure Names:: Naming conventions.
- * Representation of Binary Data:: Binary data buffers.
- * Input and Output:: Input and output.
- * Exception Handling:: Exceptions.

File: gnutls.info, Node: Enumerates and Constants, Next: Procedure Names, Up: Guile API Conventions

11.2.1 Enumerates and Constants

Lots of enumerates and constants are used in the GnuTLS C API. For each C enumerate type, a disjoint Scheme type is used--thus, enumerate values and constants are not represented by Scheme symbols nor by integers. This makes it impossible to use an enumerate value of the wrong type on the Scheme side: such errors are automatically detected by type-checking.

The enumerate values are bound to variables exported by the `(gnutls)` and `(gnutls extra)` modules. These variables are named according to the following convention:

- * All variable names are lower-case; the underscore `_` character used in the C API is replaced by hyphen `-'.
- * All variable names are prepended by the name of the enumerate type and the slash `/` character.

* In some cases, the variable name is made more explicit than the one of the C API, e.g., by avoid abbreviations.

Consider for instance this C-side enumerate:

```
typedef enum
{
  GNUTLS_CRD_CERTIFICATE = 1,
  GNUTLS_CRD_ANON,
  GNUTLS_CRD_SRP,
  GNUTLS_CRD_PSK,
  GNUTLS_CRD_IA
} gnutls_credentials_type_t;
```

The corresponding Scheme values are bound to the following variables exported by the `(gnutls)` module:

```
credentials/certificate
credentials/anonymous
credentials/srp
credentials/psk
credentials/ia
```

Hopefully, most variable names can be deduced from this convention.

Scheme-side "enumerate" values can be compared using `eq?` (*note equality predicates: (guile)Equality.). Consider the following example:

```
(let ((session (make-session connection-end/client)))

  ;;
  ;; ...
  ;;

  ;; Check the ciphering algorithm currently used by SESSION.
  (if (eq? cipher/arcfour (session-cipher session))
      (format #t "We're using the ARCFOUR algorithm")))
```

In addition, all enumerate values can be converted to a human-readable string, in a type-specific way. For instance, `(cipher->string cipher/arcfour)` yields `"ARCFOUR 128"`, while `(key-usage->string key-usage/digital-signature)` yields `"digital-signature"`. Note that these strings may not be sufficient for use in a user interface since they are fairly concise and not internationalized.

File: gnutls.info, Node: Procedure Names, Next: Representation of Binary Data, Prev: Enumerates and Constants,

11.2.2 Procedure Names

Unlike C functions in GnuTLS, the corresponding Scheme procedures are named in a way that is close to natural English. Abbreviations are also avoided. For instance, the Scheme procedure corresponding to ``gnutls_certificate_set_dh_params'` is named ``set-certificate-credentials-dh-parameters!'`. The ``gnutls_'` prefix is always omitted from variable names since a similar effect can be achieved using Guile's nifty binding renaming facilities, should it be needed (*note Using Guile Modules: (guile)Using Guile Modules.).

Often Scheme procedure names differ from C function names in a way that makes it clearer what objects they operate on. For example, the Scheme procedure named ``set-session-transport-port!'` corresponds to ``gnutls_transport_set_ptr'`, making it clear that this procedure applies to session.

File: gnutls.info, Node: Representation of Binary Data, Next: Input and Output, Prev: Procedure Names, Up: Guile API Conventions

11.2.3 Representation of Binary Data

Many procedures operate on binary data. For instance, ``pkcs3-import-dh-parameters'` expects binary data as input and, similarly, procedures like ``pkcs1-export-rsa-parameters'` return binary data.

Binary data is represented on the Scheme side using SRFI-4 homogeneous vectors (*note SRFI-4: (guile)SRFI-4.). Although any type of homogeneous vector may be used, ``u8vector's` (i.e., vectors of bytes) are highly recommended.

As an example, generating and then exporting RSA parameters in the PEM format can be done as follows:

```
(let* ((rsa-params (make-rsa-parameters 1024))
      (raw-data
       (pkcs1-export-rsa-parameters rsa-params
                                   x509-certificate-format/pem)))
  (uniform-vector-write raw-data (open-output-file "some-file.pem")))
```

For an example of OpenPGP key import from a file, see *note Importing OpenPGP Keys Guile Example:.

11.2.4 Input and Output

The underlying transport of a TLS session can be any Scheme input/output port (*note Ports and File Descriptors: (guile)Ports and File Descriptors.). This has to be specified using ``set-session-transport-port!`.

However, for better performance, a raw file descriptor can be specified, using ``set-session-transport-fd!`. For instance, if the transport layer is a socket port over an OS-provided socket, you can use the ``port->fdes'` or ``fileno'` procedure to obtain the underlying file descriptor and pass it to ``set-session-transport-fd!` (*note ``port->fdes'` and ``fileno'`: (guile)Ports and File Descriptors.). This would work as follows:

```
(let ((socket (socket (socket PF_INET SOCK_STREAM 0))
                    (session (make-session connection-end/client)))

      ;;
      ;; Establish a TCP connection...
      ;;

      ;; Use the file descriptor that underlies SOCKET.
      (set-session-transport-fd! session (fileno socket)))
```

Once a TLS session is established, data can be communicated through it (i.e., `_via_` the TLS record layer) using the port returned by ``session-record-port!`:

```
(let ((session (make-session connection-end/client)))

      ;;
      ;; Initialize the various parameters of SESSION, set up
      ;; a network connection, etc...
      ;;

      (let ((i/o (session-record-port session))
            (write "Hello peer!" i/o)
            (let ((greetings (read i/o)))

                  ;; ...
```

```
(bye session close-request/rdwr))))
```

A lower-level I/O API is provided by ``record-send'` and ``record-receive!'` which take an SRFI-4 vector to represent the data sent or received. While it might improve performance, it is much less convenient than the above and should rarely be needed.

File: [gnutls.info](#), Node: Exception Handling, Prev: [Input and Output](#), Up: [Guile API Conventions](#)

11.2.5 Exception Handling

GnuTLS errors are implemented as Scheme exceptions (**note exceptions in Guile: (guile)Exceptions.*). Each time a GnuTLS function returns an error, an exception with key ``gnutls-error'` is raised. The additional arguments that are thrown include an error code and the name of the GnuTLS procedure that raised the exception. The error code is pretty much like an enumerate value: it is one of the ``error/'` variables exported by the ``(gnutls)'` module (**note Enumerates and Constants:.*). Exceptions can be turned into error messages using the ``error->string'` procedure.

The following examples illustrates how GnuTLS exceptions can be handled:

```
(let ((session (make-session connection-end/server)))

  ;;
  ;; ...
  ;;

  (catch 'gnutls-error
    (lambda ()
      (handshake session))
    (lambda (key err function . currently-unused)
      (format (current-error-port)
              "a GnuTLS error was raised by `~a': ~a~%"
              function (error->string err))))))
```

Again, error values can be compared using ``eq?'`:

```
;; `gnutls-error' handler.
(lambda (key err function . currently-unused)
  (if (eq? err error/fatal-alert-received)
      (format (current-error-port)
              "a fatal alert was caught!~%")
      (format (current-error-port)
              "something bad happened: ~a~%"))
```

```
(error->string err))))
```

Note that the `catch` handler is currently passed only 3 arguments but future versions might provide it with additional arguments. Thus, it must be prepared to handle more than 3 arguments, as in this example.

11.3 Guile Examples

```
=====
```

This chapter provides examples that illustrate common use cases.

* Menu:

- * Anonymous Authentication Guile Example:: Simplest client and server.
- * OpenPGP Authentication Guile Example:: Using OpenPGP-based authentication.
- * Importing OpenPGP Keys Guile Example:: Importing keys from files.

File: gnutls.info, Node: Anonymous Authentication Guile Example, Next: OpenPGP Authentication Guile Example, Up: Guile Examples

11.3.1 Anonymous Authentication Guile Example

```
-----
```

"Anonymous authentication" is very easy to use. No certificates are needed by the communicating parties. Yet, it allows them to benefit from end-to-end encryption and integrity checks.

The client-side code would look like this (assuming SOME-SOCKET is bound to an open socket port):

```
;; Client-side.

(let ((client (make-session connection-end/client)))
  ;; Use the default settings.
  (set-session-default-priority! client)

  ;; Don't use certificate-based authentication.
  (set-session-certificate-type-priority! client '())

  ;; Request the "anonymous Diffie-Hellman" key exchange method.
  (set-session-kx-priority! client (list kx/anon-dh))

  ;; Specify the underlying socket.
```

```

(set-session-transport-fd! client (fileno some-socket))

;; Create anonymous credentials.
(set-session-credentials! client
  (make-anonymous-client-credentials))

;; Perform the TLS handshake with the server.
(handshake client)

;; Send data over the TLS record layer.
(write "hello, world!" (session-record-port client))

;; Terminate the TLS session.
(bye client close-request/rdwr))

```

The corresponding server would look like this (again, assuming SOME-SOCKET is bound to a socket port):

```

;; Server-side.

(let ((server (make-session connection-end/server)))
  (set-session-default-priority! server)
  (set-session-certificate-type-priority! server '())
  (set-session-kx-priority! server (list kx/anon-dh))

  ;; Specify the underlying transport socket.
  (set-session-transport-fd! server (fileno some-socket))

  ;; Create anonymous credentials.
  (let ((cred (make-anonymous-server-credentials))
        (dh-params (make-dh-parameters 1024)))
    ;; Note: DH parameter generation can take some time.
    (set-anonymous-server-dh-parameters! cred dh-params)
    (set-session-credentials! server cred))

  ;; Perform the TLS handshake with the client.
  (handshake server)

  ;; Receive data over the TLS record layer.
  (let ((message (read (session-record-port server))))
    (format #t "received the following message: ~a~%"
      message)

    (bye server close-request/rdwr)))

```

This is it!

11.3.2 OpenPGP Authentication Guile Example

GnuTLS allows users to authenticate using OpenPGP certificates. The relevant procedures are provided by the `(gnutls extra)' module. Using OpenPGP-based authentication is not more complicated than using anonymous authentication. It requires a bit of extra work, though, to import the OpenPGP public and private key of the client/server. Key import is omitted here and is left as an exercise to the reader (*note Importing OpenPGP Keys Guile Example:).

Assuming SOME-SOCKET is bound to an open socket port and PUB and SEC are bound to the client's OpenPGP public and secret key, respectively, client-side code would look like this:

```
;; Client-side.

(define %certs (list certificate-type/openpgp))

(let ((client (make-session connection-end/client))
      (cred (make-certificate-credentials)))
  (set-session-default-priority! client)

  ;; Choose OpenPGP certificates.
  (set-session-certificate-type-priority! client %certs)

  ;; Prepare appropriate client credentials.
  (set-certificate-credentials-openpgp-keys! cred pub sec)
  (set-session-credentials! client cred)

  ;; Specify the underlying transport socket.
  (set-session-transport-fd! client (fileno some-socket))

  (handshake client)
  (write "hello, world!" (session-record-port client))
  (bye client close-request/rdwr))
```

Similarly, server-side code would be along these lines:

```
;; Server-side.

(define %certs (list certificate-type/openpgp))

(let ((server (make-session connection-end/server))
      (rsa (make-rsa-parameters 1024)))
```

```

(dh (make-dh-parameters 1024))
(set-session-default-priority! server)

;; Choose OpenPGP certificates.
(set-session-certificate-type-priority! server %certs)

(let ((cred (make-certificate-credentials)))
  ;; Prepare credentials with RSA and Diffie-Hellman parameters.
  (set-certificate-credentials-dh-parameters! cred dh)
  (set-certificate-credentials-rsa-export-parameters! cred rsa)
  (set-certificate-credentials-openpgp-keys! cred pub sec)
  (set-session-credentials! server cred))

(set-session-transport-fd! server (fileno some-socket))

(handshake server)
(let ((msg (read (session-record-port server))))
  (format #t "received: ~a~%" msg)

  (bye server close-request/rdwr)))

```

In practice, generating RSA parameters (and Diffie-Hellman parameters) can take a long time. Thus, you may want to generate them once and store them in a file for future re-use (*note ``pkcs1-export-rsa-parameters'` and ``pkcs1-import-rsa-parameters'`: Core Interface.).

File: [gnutls.info](#), Node: [Importing OpenPGP Keys Guile Example](#), Prev: [OpenPGP Authentication Guile Example](#), Up: [Guile Examples](#)

11.3.3 Importing OpenPGP Keys Guile Example

The following example provides a simple way of importing "ASCII-armored" OpenPGP keys from files, using the ``import-openpgp-certificate'` and ``import-openpgp-private-key'` procedures provided by the ``(gnutls extra)'` module.

```

(use-modules (srfi srfi-4)
  (gnutls extra))

(define (import-key-from-file import-proc file)
  ;; Import OpenPGP key from FILE using IMPORT-PROC.

  ;; Prepare a u8vector large enough to hold the raw
  ;; key contents.
  (let* ((size (stat:size (stat path))))

```

```

(raw (make-u8vector size)))

;; Fill in the u8vector with the contents of FILE.
(uniform-vector-read! raw (open-input-file file))

;; Pass the u8vector to the import procedure.
(import-proc raw openpgp-certificate-format/base64)))

(define (import-public-key-from-file file)
  (import-key-from-file import-openpgp-certificate file))

(define (import-private-key-from-file file)
  (import-key-from-file import-openpgp-private-key file))

```

The procedures ``import-public-key-from-file'` and ``import-private-key-from-file'` can be passed a file name. They return an OpenPGP public key and private key object, respectively (*note OpenPGP key objects: Extra Interface.).

File: gnutils.info, Node: Guile Reference, Prev: Guile Examples, Up: Guile Bindings

11.4 Guile Reference

=====

This chapter documents GnuTLS Scheme procedures available to Guile programmers.

* Menu:

- * Core Interface:: Bindings for core GnuTLS.
- * Extra Interface:: Bindings for GnuTLS-Extra.

File: gnutils.info, Node: Core Interface, Next: Extra Interface, Up: Guile Reference

11.4.1 Core Interface

This section lists the Scheme procedures exported by the ``(gnutils)'` module (*note The Guile module system: (guile)The Guile module system.). This module is licenced under the GNU Lesser General Public Licence, version 2.1 or later.

-- Scheme Procedure: `set-log-level! level`
 Enable GnuTLS logging up to LEVEL (an integer).

- Scheme Procedure: set-log-procedure! proc
Use PROC (a two-argument procedure) as the global GnuTLS log procedure.

- Scheme Procedure: x509-certificate-subject-alternative-name cert index
Return two values: the alternative name type for CERT (i.e., one of the `x509-subject-alternative-name/' values) and the actual subject alternative name (a string) at INDEX. Both values are `#' if no alternative name is available at INDEX.

- Scheme Procedure: x509-certificate-subject-key-id cert
Return the subject key ID (a u8vector) for CERT.

- Scheme Procedure: x509-certificate-authority-key-id cert
Return the key ID (a u8vector) of the X.509 certificate authority of CERT.

- Scheme Procedure: x509-certificate-key-id cert
Return a statistically unique ID (a u8vector) for CERT that depends on its public key parameters. This is normally a 20-byte SHA-1 hash.

- Scheme Procedure: x509-certificate-version cert
Return the version of CERT.

- Scheme Procedure: x509-certificate-key-usage cert
Return the key usage of CERT (i.e., a list of `key-usage/' values), or the empty list if CERT does not contain such information.

- Scheme Procedure: x509-certificate-public-key-algorithm cert
Return two values: the public key algorithm (i.e., one of the `pk-algorithm/' values) of CERT and the number of bits used.

- Scheme Procedure: x509-certificate-signature-algorithm cert
Return the signature algorithm used by CERT (i.e., one of the `sign-algorithm/' values).

- Scheme Procedure: x509-certificate-matches-hostname? cert hostname
Return true if CERT matches HOSTNAME, a string denoting a DNS host name. This is the basic implementation of RFC 2818 (<http://tools.ietf.org/html/rfc2818>) (aka. HTTPS).

- Scheme Procedure: x509-certificate-issuer-dn-oid cert index
Return the OID (a string) at INDEX from CERT's issuer DN. Return `#' if no OID is available at INDEX.

- Scheme Procedure: x509-certificate-dn-oid cert index
Return OID (a string) at INDEX from CERT. Return `#f` if no OID is available at INDEX.
- Scheme Procedure: x509-certificate-issuer-dn cert
Return the distinguished name (DN) of X.509 certificate CERT.
- Scheme Procedure: x509-certificate-dn cert
Return the distinguished name (DN) of X.509 certificate CERT. The form of the DN is as described in RFC 2253 (<http://tools.ietf.org/html/rfc2253>).
- Scheme Procedure: pkcs8-import-x509-private-key data format [pass [encrypted]]
Return a new X.509 private key object resulting from the import of DATA (a uniform array) according to FORMAT. Optionally, if PASS is not `#f`, it should be a string denoting a passphrase. ENCRYPTED tells whether the private key is encrypted (`#t` by default).
- Scheme Procedure: import-x509-private-key data format
Return a new X.509 private key object resulting from the import of DATA (a uniform array) according to FORMAT.
- Scheme Procedure: import-x509-certificate data format
Return a new X.509 certificate object resulting from the import of DATA (a uniform array) according to FORMAT.
- Scheme Procedure: server-session-psk-username session
Return the username associated with PSK server session SESSION.
- Scheme Procedure: set-psk-client-credentials! cred username key key-format
Set the client credentials for CRED, a PSK client credentials object.
- Scheme Procedure: make-psk-client-credentials
Return a new PSK client credentials object.
- Scheme Procedure: set-psk-server-credentials-file! cred file
Use FILE as the password file for PSK server credentials CRED.
- Scheme Procedure: make-psk-server-credentials
Return new PSK server credentials.
- Scheme Procedure: peer-certificate-status session
Verify the peer certificate for SESSION and return a list of `certificate-status` values (such as

- ``certificate-status/revoked'`), or the empty list if the certificate is valid.
- Scheme Procedure: `set-certificate-credentials-verify-flags!` cred
[flags...]
Set the certificate verification flags to `FLAGS`, a series of ``certificate-verify'` values.
 - Scheme Procedure: `set-certificate-credentials-verify-limits!` cred
max-bits max-depth
Set the verification limits of ``peer-certificate-status'` for certificate credentials `CRED` to `MAX_BITS` bits for an acceptable certificate and `MAX_DEPTH` as the maximum depth of a certificate chain.
 - Scheme Procedure: `set-certificate-credentials-x509-keys!` cred certs
privkey
Have certificate credentials `CRED` use the X.509 certificates listed in `CERTS` and X.509 private key `PRIVKEY`.
 - Scheme Procedure: `set-certificate-credentials-x509-key-data!` cred
cert key format
Use X.509 certificate `CERT` and private key `KEY`, both uniform arrays containing the X.509 certificate and key in format `FORMAT`, for certificate credentials `CRED`.
 - Scheme Procedure: `set-certificate-credentials-x509-crl-data!` cred
data format
Use `DATA` (a uniform array) as the X.509 CRL (certificate revocation list) database for `CRED`. On success, return the number of CRLs processed.
 - Scheme Procedure: `set-certificate-credentials-x509-trust-data!` cred
data format
Use `DATA` (a uniform array) as the X.509 trust database for `CRED`. On success, return the number of certificates processed.
 - Scheme Procedure: `set-certificate-credentials-x509-crl-file!` cred
file format
Use `FILE` as the X.509 CRL (certificate revocation list) file for certificate credentials `CRED`. On success, return the number of CRLs processed.
 - Scheme Procedure: `set-certificate-credentials-x509-trust-file!` cred
file format
Use `FILE` as the X.509 trust file for certificate credentials `CRED`. On success, return the number of certificates processed.

- Scheme Procedure: set-certificate-credentials-x509-key-files! cred
cert-file key-file format
Use FILE as the password file for PSK server credentials CRED.
- Scheme Procedure:
set-certificate-credentials-rsa-export-parameters! cred
rsa-params
Use RSA parameters RSA_PARAMS for certificate credentials CRED.
- Scheme Procedure: set-certificate-credentials-dh-parameters! cred
dh-params
Use Diffie-Hellman parameters DH_PARAMS for certificate credentials CRED.
- Scheme Procedure: make-certificate-credentials
Return new certificate credentials (i.e., for use with either X.509 or OpenPGP certificates).
- Scheme Procedure: pkcs1-export-rsa-parameters rsa-params format
Export Diffie-Hellman parameters RSA_PARAMS in PKCS1 format according for FORMAT (an `x509-certificate-format' value). Return a `u8vector' containing the result.
- Scheme Procedure: pkcs1-import-rsa-parameters array format
Import Diffie-Hellman parameters in PKCS1 format (further specified by FORMAT, an `x509-certificate-format' value) from ARRAY (a homogeneous array) and return a new `rsa-params' object.
- Scheme Procedure: make-rsa-parameters bits
Return new RSA parameters.
- Scheme Procedure: set-anonymous-server-dh-parameters! cred dh-params
Set the Diffie-Hellman parameters of anonymous server credentials CRED.
- Scheme Procedure: make-anonymous-client-credentials
Return anonymous client credentials.
- Scheme Procedure: make-anonymous-server-credentials
Return anonymous server credentials.
- Scheme Procedure: set-session-dh-prime-bits! session bits
Use BITS DH prime bits for SESSION.
- Scheme Procedure: pkcs3-export-dh-parameters dh-params format
Export Diffie-Hellman parameters DH_PARAMS in PKCS3 format according for FORMAT (an `x509-certificate-format' value). Return a `u8vector' containing the result.

- Scheme Procedure: pkcs3-import-dh-parameters array format
 Import Diffie-Hellman parameters in PKCS3 format (further specified by FORMAT, an `x509-certificate-format' value) from ARRAY (a homogeneous array) and return a new `dh-params' object.

- Scheme Procedure: make-dh-parameters bits
 Return new Diffie-Hellman parameters.

- Scheme Procedure: set-session-transport-port! session port
 Use PORT as the input/output port for SESSION.

- Scheme Procedure: set-session-transport-fd! session fd
 Use file descriptor FD as the underlying transport for SESSION.

- Scheme Procedure: session-record-port session
 Return a read-write port that may be used to communicate over SESSION. All invocations of `session-port' on a given session return the same object (in the sense of `eq?').

- Scheme Procedure: record-receive! session array
 Receive data from SESSION into ARRAY, a uniform homogeneous array. Return the number of bytes actually received.

- Scheme Procedure: record-send session array
 Send the record constituted by ARRAY through SESSION.

- Scheme Procedure: set-session-credentials! session cred
 Use CRED as SESSION's credentials.

- Scheme Procedure: cipher-suite->string kx cipher mac
 Return the name of the given cipher suite.

- Scheme Procedure: set-session-default-export-priority! session
 Have SESSION use the default export priorities.

- Scheme Procedure: set-session-default-priority! session
 Have SESSION use the default priorities.

- Scheme Procedure: set-session-certificate-type-priority! session items
 Use ITEMS (a list) as the list of preferred certificate-type for SESSION.

- Scheme Procedure: set-session-protocol-priority! session items
 Use ITEMS (a list) as the list of preferred protocol for SESSION.

- Scheme Procedure: set-session-kx-priority! session items

- Use ITEMS (a list) as the list of preferred kx for SESSION.
- Scheme Procedure: set-session-compression-method-priority! session items
Use ITEMS (a list) as the list of preferred compression-method for SESSION.
 - Scheme Procedure: set-session-mac-priority! session items
Use ITEMS (a list) as the list of preferred mac for SESSION.
 - Scheme Procedure: set-session-cipher-priority! session items
Use ITEMS (a list) as the list of preferred cipher for SESSION.
 - Scheme Procedure: set-server-session-certificate-request! session request
Tell how SESSION, a server-side session, should deal with certificate requests. REQUEST should be either ``certificate-request/request'` or ``certificate-request/require'`.
 - Scheme Procedure: session-our-certificate-chain session
Return our certificate chain for SESSION (as sent to the peer) in raw format (a u8vector). In the case of OpenPGP there is exactly one certificate. Return the empty list if no certificate was used.
 - Scheme Procedure: session-peer-certificate-chain session
Return the a list of certificates in raw format (u8vectors) where the first one is the peer's certificate. In the case of OpenPGP, there is always exactly one certificate. In the case of X.509, subsequent certificates indicate form a certificate chain. Return the empty list if no certificate was sent.
 - Scheme Procedure: session-client-authentication-type session
Return the client authentication type (a ``credential-type'` value) used in SESSION.
 - Scheme Procedure: session-server-authentication-type session
Return the server authentication type (a ``credential-type'` value) used in SESSION.
 - Scheme Procedure: session-authentication-type session
Return the authentication type (a ``credential-type'` value) used by SESSION.
 - Scheme Procedure: session-protocol session
Return the protocol used by SESSION.
 - Scheme Procedure: session-certificate-type session
Return SESSION's certificate type.

- Scheme Procedure: session-compression-method session
Return SESSION's compression method.
- Scheme Procedure: session-mac session
Return SESSION's MAC.
- Scheme Procedure: session-kx session
Return SESSION's kx.
- Scheme Procedure: session-cipher session
Return SESSION's cipher.
- Scheme Procedure: alert-send session level alert
Send ALERT via SESSION.
- Scheme Procedure: alert-get session
Get an alert from SESSION.
- Scheme Procedure: rehandshake session
Perform a re-handshaking for SESSION.
- Scheme Procedure: handshake session
Perform a handshake for SESSION.
- Scheme Procedure: bye session how
Close SESSION according to HOW.
- Scheme Procedure: make-session end
Return a new session for connection end END, either
`connection-end/server' or `connection-end/client'.
- Scheme Procedure: gnutls-version
Return a string denoting the version number of the underlying
GnuTLS library, e.g., `1.7.2'.
- Scheme Procedure: x509-private-key? obj
Return true if OBJ is of type `x509-private-key'.
- Scheme Procedure: x509-certificate? obj
Return true if OBJ is of type `x509-certificate'.
- Scheme Procedure: psk-client-credentials? obj
Return true if OBJ is of type `psk-client-credentials'.
- Scheme Procedure: psk-server-credentials? obj
Return true if OBJ is of type `psk-server-credentials'.

- Scheme Procedure: srp-client-credentials? obj
Return true if OBJ is of type `srp-client-credentials'.
- Scheme Procedure: srp-server-credentials? obj
Return true if OBJ is of type `srp-server-credentials'.
- Scheme Procedure: certificate-credentials? obj
Return true if OBJ is of type `certificate-credentials'.
- Scheme Procedure: rsa-parameters? obj
Return true if OBJ is of type `rsa-parameters'.
- Scheme Procedure: dh-parameters? obj
Return true if OBJ is of type `dh-parameters'.
- Scheme Procedure: anonymous-server-credentials? obj
Return true if OBJ is of type `anonymous-server-credentials'.
- Scheme Procedure: anonymous-client-credentials? obj
Return true if OBJ is of type `anonymous-client-credentials'.
- Scheme Procedure: session? obj
Return true if OBJ is of type `session'.
- Scheme Procedure: error->string enumval
Return a string describing ENUMVAL, a `error' value.
- Scheme Procedure: certificate-verify->string enumval
Return a string describing ENUMVAL, a `certificate-verify' value.
- Scheme Procedure: key-usage->string enumval
Return a string describing ENUMVAL, a `key-usage' value.
- Scheme Procedure: psk-key-format->string enumval
Return a string describing ENUMVAL, a `psk-key-format' value.
- Scheme Procedure: sign-algorithm->string enumval
Return a string describing ENUMVAL, a `sign-algorithm' value.
- Scheme Procedure: pk-algorithm->string enumval
Return a string describing ENUMVAL, a `pk-algorithm' value.
- Scheme Procedure: x509-subject-alternative-name->string enumval
Return a string describing ENUMVAL, a
`x509-subject-alternative-name' value.
- Scheme Procedure: x509-certificate-format->string enumval
Return a string describing ENUMVAL, a `x509-certificate-format'

value.

- Scheme Procedure: certificate-type->string enumval
Return a string describing ENUMVAL, a `certificate-type' value.
- Scheme Procedure: protocol->string enumval
Return a string describing ENUMVAL, a `protocol' value.
- Scheme Procedure: close-request->string enumval
Return a string describing ENUMVAL, a `close-request' value.
- Scheme Procedure: certificate-request->string enumval
Return a string describing ENUMVAL, a `certificate-request' value.
- Scheme Procedure: certificate-status->string enumval
Return a string describing ENUMVAL, a `certificate-status' value.
- Scheme Procedure: handshake-description->string enumval
Return a string describing ENUMVAL, a `handshake-description' value.
- Scheme Procedure: alert-description->string enumval
Return a string describing ENUMVAL, a `alert-description' value.
- Scheme Procedure: alert-level->string enumval
Return a string describing ENUMVAL, a `alert-level' value.
- Scheme Procedure: connection-end->string enumval
Return a string describing ENUMVAL, a `connection-end' value.
- Scheme Procedure: compression-method->string enumval
Return a string describing ENUMVAL, a `compression-method' value.
- Scheme Procedure: digest->string enumval
Return a string describing ENUMVAL, a `digest' value.
- Scheme Procedure: mac->string enumval
Return a string describing ENUMVAL, a `mac' value.
- Scheme Procedure: credentials->string enumval
Return a string describing ENUMVAL, a `credentials' value.
- Scheme Procedure: params->string enumval
Return a string describing ENUMVAL, a `params' value.
- Scheme Procedure: kx->string enumval
Return a string describing ENUMVAL, a `kx' value.

-- Scheme Procedure: cipher->string enumval
Return a string describing ENUMVAL, a `cipher' value.

File: gnutils.info, Node: Extra Interface, Prev: Core Interface, Up: Guile Reference

11.4.2 Extra Interface

This section lists the Scheme procedures exported by the `(gnutils extra)' module. This module is licenced under the GNU General Public Licence, version 3 or later.

-- Scheme Procedure: set-certificate-credentials-openpgp-keys! cred
pub sec
Use certificate PUB and secret key SEC in certificate credentials CRED.

-- Scheme Procedure: openpgp-keyring-contains-key-id? keyring id
Return `#f' if key ID ID is in KEYRING, `#f' otherwise.

-- Scheme Procedure: import-openpgp-keyring data format
Import DATA (a u8vector) according to FORMAT and return the imported keyring.

-- Scheme Procedure: openpgp-certificate-usage key
Return a list of values denoting the key usage of KEY.

-- Scheme Procedure: openpgp-certificate-version key
Return the version of the OpenPGP message format (RFC2440) honored by KEY.

-- Scheme Procedure: openpgp-certificate-algorithm key
Return two values: the certificate algorithm used by KEY and the number of bits used.

-- Scheme Procedure: openpgp-certificate-names key
Return the list of names for KEY.

-- Scheme Procedure: openpgp-certificate-name key index
Return the INDEXth name of KEY.

-- Scheme Procedure: openpgp-certificate-fingerprint key
Return a new u8vector denoting the fingerprint of KEY.

-- Scheme Procedure: openpgp-certificate-fingerprint! key fpr
Store in FPR (a u8vector) the fingerprint of KEY. Return the number of bytes stored in FPR.

- Scheme Procedure: openpgp-certificate-id! key id
Store the ID (an 8 byte sequence) of certificate KEY in ID (a u8vector).

- Scheme Procedure: openpgp-certificate-id key
Return the ID (an 8-element u8vector) of certificate KEY.

- Scheme Procedure: import-openpgp-private-key data format [pass]
Return a new OpenPGP private key object resulting from the import of DATA (a uniform array) according to FORMAT. Optionally, a passphrase may be provided.

- Scheme Procedure: import-openpgp-certificate data format
Return a new OpenPGP certificate object resulting from the import of DATA (a uniform array) according to FORMAT.

- Scheme Procedure: openpgp-certificate-format->string enumval
Return a string describing ENUMVAL, a `openpgp-certificate-format' value.

- Scheme Procedure: openpgp-keyring? obj
Return true if OBJ is of type `openpgp-keyring'.

- Scheme Procedure: openpgp-private-key? obj
Return true if OBJ is of type `openpgp-private-key'.

- Scheme Procedure: openpgp-certificate? obj
Return true if OBJ is of type `openpgp-certificate'.

12 Internal Architecture of GnuTLS

This chapter is to give a brief description of the way GnuTLS works. The focus is to give an idea to potential developers and those who want to know what happens inside the black box.

* Menu:

- * The TLS Protocol::
- * TLS Handshake Protocol::
- * TLS Authentication Methods::
- * TLS Extension Handling::
- * Cryptographic Backend::

12.1 The TLS Protocol

=====

The main needs for the TLS protocol to be used are shown in the image below.

[image src="gnutls-client-server-use-case.png"]

This is being accomplished by the following object diagram. Note that since GnuTLS is being developed in C object are just structures with attributes. The operations listed are functions that require the first parameter to be that object. [image src="gnutls-objects.png"]

12.2 TLS Handshake Protocol

=====

The GnuTLS handshake protocol is implemented as a state machine that waits for input or returns immediately when the non-blocking transport layer functions are used. The main idea is shown in the following figure.

[image src="gnutls-handshake-state.png"]

Also the way the input is processed varies per ciphersuite. Several implementations of the internal handlers are available and *note gnutls_handshake:: only multiplexes the input to the appropriate handler. For example a PSK ciphersuite has a different implementation of the `process_client_key_exchange` than a certificate ciphersuite.

[image src="gnutls-handshake-sequence.png"]

12.3 TLS Authentication Methods

=====

In GnuTLS authentication methods can be implemented quite easily. Since the required changes to add a new authentication method affect

only the handshake protocol, a simple interface is used. An authentication method needs only to implement the functions as seen in the figure below.

[image src="gnutls-mod_auth_st.png"]

The functions that need to be implemented are the ones responsible for interpreting the handshake protocol messages. It is common for such functions to read data from one or more ``credentials_t'` structures(1) and write data, such as certificates, usernames etc. to ``auth_info_t'` structures.

Simple examples of existing authentication methods can be seen in ``auth_psk.c'` for PSK ciphersuites and ``auth_srp.c'` for SRP ciphersuites. After implementing these functions the structure holding its pointers has to be registered in ``gnutls_algorithms.c'` in the ``_gnutls_kx_algorithms'` structure.

----- Footnotes -----

(1) such as the ``gnutls_certificate_credentials_t'` structures

File: gnutls.info, Node: TLS Extension Handling, Next: Cryptographic Backend, Prev: TLS Authentication Methods, Up: Internal architecture of GnuTLS

12.4 TLS Extension Handling

=====

As with authentication methods, the TLS extensions handlers can be implemented using the following interface.

[image src="gnutls-extensions_st.png"]

Here there are two functions, one for receiving the extension data and one for sending. These functions have to check internally whether they operate in client or server side.

A simple example of an extension handler can be seen in ``ext_srp.c'` After implementing these functions, together with the extension number they handle, they have to be registered in ``gnutls_extensions.c'` in the ``_gnutls_extensions'` structure.

12.4.1 Adding a New TLS Extension

Adding support for a new TLS extension is done from time to time, and the process to do so is not difficult. Here are the steps you need to

follow if you wish to do this yourself. For sake of discussion, let's consider adding support for the hypothetical TLS extension `foobar`.

1. Modify `configure.in` to add `--enable-foobar` or `--disable-foobar`.

Which to chose depends on whether you intend to make the extension be enabled by default. Look at existing checks (i.e., SRP, authz) for how to model the code. For example:

```
AC_MSG_CHECKING([whether to disable foobar support])
AC_ARG_ENABLE(foobar,
  AS_HELP_STRING([--disable-foobar],
    [disable foobar support]),
  ac_enable_foobar=no)
if test x$ac_enable_foobar != xno; then
  AC_MSG_RESULT(no)
  AC_DEFINE(ENABLE_FOOBAR, 1, [enable foobar])
else
  ac_full=0
  AC_MSG_RESULT(yes)
fi
AM_CONDITIONAL(ENABLE_FOOBAR, test "$ac_enable_foobar" != "no")
```

2. Add IANA extension value to `extensions_t` in `gnutls_int.h`.

A good name for the value would be GNUTLS_EXTENSION_FOOBAR. Check with <http://www.iana.org/assignments/tls-extensiontype-values> for allocated values. For experiments, you could pick a number but remember that some consider it a bad idea to deploy such modified version since it will lead to interoperability problems in the future when the IANA allocates that number to someone else, or when the foobar protocol is allocated another number.

3. Add an entry to `_gnutls_extensions` in `gnutls_extensions.c`.

A typical entry would be:

```
#if ENABLE_FOOBAR
  GNUTLS_EXTENSION_ENTRY (GNUTLS_EXTENSION_FOOBAR,
    _gnutls_foobar_recv_params,
    _gnutls_foobar_send_params),
#endif
```

The GNUTLS_EXTENSION_FOOBAR is the integer value you added to `gnutls_int.h` earlier. The two functions are new functions that you will need to implement, most likely you'll need to add an `#include "ext_foobar.h"` as well.

4. Add new files ``ext_foobar.c'` and ``ext_foobar.h'` that implements the extension.

The functions you are responsible to add are those mentioned in the previous step. As a starter, you could add this:

```
int
_gnutls_foobar_recv_params (gnutls_session_t session,
                           const opaque * data,
                           size_t data_size)
{
    return 0;
}

int
_gnutls_foobar_send_params (gnutls_session_t session,
                           opaque * data,
                           size_t _data_size)
{
    return 0;
}
```

The ``_gnutls_foobar_recv_params'` function is responsible for parsing incoming extension data (both in the client and server).

The ``_gnutls_foobar_send_params'` function is responsible for sending extension data (both in the client and server).

If you receive length fields that doesn't match, return ``GNUTLS_E_UNEXPECTED_PACKET_LENGTH'`. If you receive invalid data, return ``GNUTLS_E_RECEIVED_ILLEGAL_PARAMETER'`. You can use other error codes too. Return 0 on success.

The function typically store some information in the ``session'` variable for later usage. If you need to add new fields there, check ``tls_ext_st'` in ``gnutls_int.h'` and compare with existing TLS extension specific variables.

Recall that both the client and server both send and receives parameters, and your code most likely will need to do different things depending on which mode it is in. It may be useful to make this distinction explicit in the code. Thus, for example, a better template than above would be:

```
int
_gnutls_foobar_recv_params (gnutls_session_t session,
                           const opaque * data,
```

```

        size_t data_size)
    {
        if (session->security_parameters.entity == GNUTLS_CLIENT)
            return foobar_rcv_client (session, data, data_size);
        else
            return foobar_rcv_server (session, data, data_size);
    }

int
_gnutls_foobar_send_params (gnutls_session_t session,
                           opaque * data,
                           size_t data_size)
{
    if (session->security_parameters.entity == GNUTLS_CLIENT)
        return foobar_send_client (session, data, data_size);
    else
        return foobar_send_server (session, data, data_size);
}

```

The functions used would be declared as `static' functions, of the appropriate prototype, in the same file.

When adding the files, you'll need to add them to `Makefile.am' as well, for example:

```

if ENABLE_FOOBAR
OBJECTS += ext_foobar.c
HFILES += ext_foobar.h
endif

```

5. Add API functions to enable/disable the extension.

Normally the client will have one API to request use of the extension, and setting some extension specific data. The server will have one API to let the library know that it is willing to accept the extension, often this is implemented through a callback but it doesn't have to.

The APIs need to be added to `includes/gnutls/gnutls.h' or `includes/gnutls/extra.h' as appropriate. It is recommended that if you don't have a requirement to use the LGPLv2.1+ license for your extension, that you place your work under the GPLv3+ license and thus in the libgnutls-extra library.

You can implement the API function in the `ext_foobar.c' file, or if that file ends up becoming rather larger, add a `gnutls_foobar.c' file.

12.5 Certificate Handling

=====

What is provided by the certificate handling functions is summarized in the following diagram.

[image src="gnutls-certificate-user-use-case.png"]

File: gnutls.info, Node: Cryptographic Backend, Prev: TLS Extension Handling, Up: Internal architecture of GnuTLS

12.6 Cryptographic Backend

=====

Several new systems provide hardware assisted cryptographic algorithm implementations that offer implementations some orders of magnitude faster than the software. For this reason in current releases of GnuTLS it is possible to override parts of the crypto backend or the whole. It is possible to override them both at runtime and compile time, however here we will discuss the runtime possibility. The API available for this functionality is in ``gnutls/crypto.h'` header file.

12.6.1 Override specific algorithms

When an optimized implementation of a single algorithm is available, say a hardware assisted version of AES-CBC then the following functions can be used to register those algorithms.

* `*note gnutls_crypto_single_cipher_register2::` To register a cipher algorithm.

* `*note gnutls_crypto_single_mac_register2::` To register a MAC algorithm.

* `*note gnutls_crypto_single_digest_register2::` To register a digest (hash) algorithm.

Those registration functions will only replace the specified algorithm and leave the rest of subsystem intact.

12.6.2 Override parts of the backend

In some systems, such as embedded ones, it might be desirable to

override big parts of the cryptographic backend, or even all of them.
For this reason the following functions are provided.

- * *note gnutls_crypto_cipher_register2:: To override the cryptographic algorithms backend.
- * *note gnutls_crypto_mac_register2:: To override the MAC algorithms backend.
- * *note gnutls_crypto_digest_register2:: To override the digest algorithms backend.
- * *note gnutls_crypto_rnd_register2:: To override the random number generator backend.
- * *note gnutls_crypto_bigint_register2:: To override the big number number operations backend.
- * *note gnutls_crypto_pk_register2:: To override the public key encryption backend. This is tight to the big number operations so either both of them should be updated or care must be taken to use the same format.

If all of them are used then GnuTLS will no longer use libcrypt.

@chapter Preface
```

This document tries to demonstrate and explain the @acronym{GnuTLS} library API. A brief introduction to the protocols and the technology involved, is also included so that an application programmer can better understand the @acronym{GnuTLS} purpose and actual offerings. Even if @acronym{GnuTLS} is a typical library software, it operates over several security and cryptographic protocols, which require the programmer to make careful and correct usage of them, otherwise he risks to offer just a false sense of security. Security and the network security terms are very general terms even for computer software thus cannot be easily restricted to a single cryptographic

library. For that reason, do not consider a program secure just because it uses `@acronym{GnuTLS}`; there are several ways to compromise a program or a communication line and `@acronym{GnuTLS}` only helps with some of them.

Although this document tries to be self contained, basic network programming and PKI knowlegde is assumed in most of it. A good introduction to networking can be found in `@xcite{STEVENS}` and for Public Key Infrastructure in `@xcite{GUTPKI}`.

`@anchor{Availability}`

Updated versions of the `@acronym{GnuTLS}` software and this document will be available from `@url{http://www.gnutls.org/}` and `@url{http://www.gnu.org/software/gnutls/}`.

`@section Getting Help`

A mailing list where users may help each other exists, and you can reach it by sending e-mail to `@email{help-gnutls@@gnu.org}`. Archives of the mailing list discussions, and an interface to manage subscriptions, is available through the World Wide Web at `@url{http://lists.gnu.org/mailman/listinfo/help-gnutls}`.

A mailing list for developers are also available, see `@url{http://www.gnu.org/software/gnutls/lists.html}`.

Bug reports should be sent to `@email{bug-gnutls@@gnu.org}`, see `@xref{Bug Reports}`.

`@node Commercial Support`

`@section Commercial Support`

Commercial support is available for users of GnuTLS. The kind of support that can be purchased may include:

`@itemize`

`@item Implement new features.`

Such as a new TLS extension.

@item Port GnuTLS to new platforms.

This could include porting to an embedded platforms that may need memory or size optimization.

@item Integrating TLS as a security environment in your existing project.

@item System design of components related to TLS.

@end itemize

Hagagatan 24
113 47 Stockholm
Sweden

E-mail: simon@josefsson.org

@end verbatim

If your company provide support related to GnuTLS and would like to be mentioned here, contact the author (@pxref{Bug Reports}).

@node Downloading and Installing

@section Downloading and Installing

@cindex Installation

@cindex Download

GnuTLS is available for download from the following URL:

@url{<http://www.gnutls.org/download.html>}

The latest version is stored in a file, e.g.,

@samp{gnutls-@value{VERSION}.tar.gz} where the @samp{@value{VERSION}} value is the highest version number in the directory.

GnuTLS uses a Linux-like development cycle: even minor version numbers indicate a stable release and a odd minor version number indicates a development release. For example, GnuTLS 1.6.3 denote a stable release since 6 is even, and GnuTLS 1.7.11 denote a development release since 7 is odd.

GnuTLS depends on Libgcrypt,
and you will need to install Libgcrypt
before installing GnuTLS. Libgcrypt is available from

@url{ftp://ftp.gnupg.org/gcrypt/libgcrypt}. Libgcrypt needs another library, libpgp-error, and you need to install libpgp-error before installing Libgcrypt. Libpgp-error is available from @url{ftp://ftp.gnupg.org/gcrypt/libpgp-error}.

Don't forget to verify the cryptographic signature after downloading source code packages.

The package is then extracted, configured and built like many other packages that use Autoconf. For detailed information on configuring and building it, refer to the @file{INSTALL} file that is part of the distribution archive. Typically you invoke @code{./configure} and then @code{make check install}. There are a number of compile-time parameters, as discussed below.

The compression libraries (libz and lzo) are optional dependencies. You can get libz from @url{http://www.zlib.net/}. You can get lzo from @url{http://www.oberhumer.com/opensource/lzo/}.

The X.509 part of GnuTLS needs ASN.1 functionality, from a library called libtasn1. A copy of libtasn1 is included in GnuTLS. If you want to install it separately (e.g., to make it possible to use libtasn1 in other programs), you can get it from @url{http://www.gnu.org/software/gnutls/download.html}.

The OpenPGP part of GnuTLS uses a stripped down version of OpenCDK for parsing OpenPGP packets. It is included in GnuTLS. Use parameter @code{--disable-openpgp-authentication} to disable the OpenPGP functionality in GnuTLS. Unfortunately, we didn't have resources to maintain the code in a separate library.

Regarding the Guile bindings, there are additional installation considerations, see @xref{Guile Preparations}.

A few @code{configure} options may be relevant, summarized in the table.

@table @code

@item --disable-srp-authentication

@itemx --disable-psk-authentication

@itemx --disable-anon-authentication

@itemx --disable-extra-pki

@itemx --disable-openpgp-authentication

@itemx --disable-openssl-compatibility

Disable or enable particular features. Generally not recommended.

@end table

For the complete list, refer to the output from `configure --help`.

@node Bug Reports
@section Bug Reports
@cindex Reporting Bugs

If you think you have found a bug in GnuTLS, please investigate it and report it.

@itemize @bullet

@item Please make sure that the bug is really in GnuTLS, and preferably also check that it hasn't already been fixed in the latest version.

@item You have to send us a test case that makes it possible for us to reproduce the bug.

@item You also have to explain what is wrong; if you get a crash, or if the results printed are not good and in that case, in what way. Make sure that the bug report includes all information you would need to fix this kind of bug for someone else.

@end itemize

Please make an effort to produce a self-contained report, with something definite that can be tested or debugged. Vague queries or piecemeal messages are difficult to act on and don't help the development effort.

If your bug report is good, we will do our best to help you to get a corrected version of the software; if the bug report is poor, we won't do anything about it (apart from asking you to send better bug reports).

If you think something in this manual is unclear, or downright incorrect, or if the language needs to be improved, please also send a note.

Send your bug report to:

@center @samp{bug-gnutls@gnu.org}

@node Contributing
@section Contributing
@cindex Contributing

@cindex Hacking

If you want to submit a patch for inclusion -- from solve a typo you discovered, up to adding support for a new feature -- you should submit it as a bug report (@pxref{Bug Reports}). There are some things that you can do to increase the chances for it to be included in the official package.

Unless your patch is very small (say, under 10 lines) we require that you assign the copyright of your work to the Free Software Foundation. This is to protect the freedom of the project. If you have not already signed papers, we will send you the necessary information when you submit your contribution.

For contributions that doesn't consist of actual programming code, the only guidelines are common sense. Use it.

For code contributions, a number of style guides will help you:

@itemize @bullet

@item Coding Style.

Follow the GNU Standards document (@pxref{top, GNU Coding Standards,, standards}).

If you normally code using another coding standard, there is no problem, but you should use @samp{indent} to reformat the code (@pxref{top, GNU Indent,, indent}) before submitting your work.

@item Use the unified diff format @samp{diff -u}.

@item Return errors.

No reason whatsoever should abort the execution of the library. Even memory allocation errors, e.g. when malloc return NULL, should work although result in an error code.

@item Design with thread safety in mind.

Don't use global variables. Don't even write to per-handle global variables unless the documented behaviour of the function you write is to write to the per-handle global variable.

@item Avoid using the C math library.

It causes problems for embedded implementations, and in most situations it is very easy to avoid using it.

@item Document your functions.

Use comments before each function headers, that, if properly formatted, are extracted into Texinfo manuals and GTK-DOC web pages.

@item Supply a ChangeLog and NEWS entries, where appropriate.

@end itemize

@node The Library

@chapter The Library

In brief @acronym{GnuTLS} can be described as a library which offers an API to access secure communication protocols. These protocols provide privacy over insecure lines, and were designed to prevent eavesdropping, tampering, or message forgery.

Technically @acronym{GnuTLS} is a portable ANSI C based library which implements the TLS 1.1 and SSL 3.0 protocols (@xref{Introduction to TLS}), for a more detailed description of the protocols), accompanied with the required framework for authentication and public key infrastructure. Important features of the @acronym{GnuTLS} library include:

@itemize

@item Support for TLS 1.0, TLS 1.1, and SSL 3.0 protocols.

@item Support for both @acronym{X.509} and @acronym{OpenPGP} certificates.

@item Support for handling and verification of certificates.

@item Support for @acronym{SRP} for TLS authentication.

@item Support for @acronym{PSK} for TLS authentication.

@item Support for TLS Extension mechanism.

@item Support for TLS Compression Methods.

@end itemize

Additionally @acronym{GnuTLS} provides a limited emulation API for the widely used OpenSSL@footnote{ @url{http://www.openssl.org/}} library, to ease integration with existing applications.

@acronym{GnuTLS} consists of three independent parts, namely the ``TLS protocol part'', the ``Certificate part'', and the ``Cryptographic backend'' part. The `TLS protocol part' is the actual protocol implementation, and is entirely implemented within the @acronym{GnuTLS} library. The `Certificate part' consists of the certificate parsing, and verification functions which is partially implemented in the @acronym{GnuTLS} library. The

@acronym{Libtasn1} @footnote{ @url{ftp://ftp.gnupg.org/gcrypt/alpha/gnutls/libtasn1/} }, a library which offers @acronym{ASN.1} parsing capabilities, is used for the @acronym{X.509} certificate parsing functions. A smaller version of @acronym{OpenCDK} @footnote{ @url{ftp://ftp.gnupg.org/gcrypt/alpha/gnutls/opencdk/} } is used for the @acronym{OpenPGP} key support in @acronym{GnuTLS}. The ``Cryptographic backend" is provided by the @acronym{Libgcrypt} @footnote{ @url{ftp://ftp.gnupg.org/gcrypt/alpha/libgcrypt/} } library @footnote{On current versions of GnuTLS it is possible to override the default crypto backend. Check @pxref{Cryptographic Backend} for details}.

In order to ease integration in embedded systems, parts of the @acronym{GnuTLS} library can be disabled at compile time. That way a small library, with the required features, can be generated.

* Error handling::
* Memory handling::
* Callback functions::
@end menu

@node General Idea
@section General Idea

A brief description of how @acronym{GnuTLS} works internally is shown at the figure below. This section may be easier to understand after having seen the examples (@pxref{examples}).

@image{gnutls-internals,12cm,8cm}

As shown in the figure, there is a read-only global state that is initialized once by the global initialization function. This global structure, among others, contains the memory allocation functions used, and some structures needed for the @acronym{ASN.1} parser. This structure is never modified by any @acronym{GnuTLS} function, except for the deinitialization function which frees all memory allocated in the global structure and is called after the program has permanently finished using @acronym{GnuTLS}.

The credentials structure is used by some authentication methods, such as certificate authentication (@pxref{Certificate Authentication}). A credentials structure may contain certificates, private keys, temporary parameters for Diffie-Hellman or RSA key exchange, and other stuff that may be shared between several TLS sessions.

This structure should be initialized using the appropriate initialization functions. For example an application which uses

certificate authentication would probably initialize the credentials, using the appropriate functions, and put its trusted certificates in this structure. The next step is to associate the credentials structure with each @acronym{TLS} session.

A @acronym{GnuTLS} session contains all the required stuff for a session to handle one secure connection. This session calls directly to the transport layer functions, in order to communicate with the peer. Every session has a unique session ID shared with the peer.

Since TLS sessions can be resumed, servers would probably need a database backend to hold the session's parameters. Every @acronym{GnuTLS} session after a successful handshake calls the appropriate backend function (@xref{resume}, for information on initialization) to store the newly negotiated session. The session database is examined by the server just after having received the client hello@footnote{The first message in a @acronym{TLS} handshake}, and if the session ID sent by the client, matches a stored session, the stored session will be retrieved, and the new session will be a resumed one, and will share the same session ID with the previous one.

@node Error handling

@section Error Handling

In @acronym{GnuTLS} most functions return an integer type as a result. In almost all cases a zero or a positive number means success, and a negative number indicates failure, or a situation that some action has to be taken. Thus negative error codes may be fatal or not.

Fatal errors terminate the connection immediately and further sends and receives will be disallowed. An example of a fatal error code is @code{GNUTLS_E_DECRYPTION_FAILED}. Non-fatal errors may warn about something, i.e., a warning alert was received, or indicate the some action has to be taken. This is the case with the error code @code{GNUTLS_E_REHANDSHAKE} returned by @ref{gnutls_record_recv}. This error code indicates that the server requests a re-handshake. The client may ignore this request, or may reply with an alert. You can test if an error code is a fatal one by using the @ref{gnutls_error_is_fatal}.

If any non fatal errors, that require an action, are to be returned by a function, these error codes will be documented in the function's reference. @xref{Error Codes}, for all the error codes.

@node Memory handling

@section Memory Handling

@acronym{GnuTLS} internally handles heap allocated objects

differently, depending on the sensitivity of the data they contain. However for performance reasons, the default memory functions do not overwrite sensitive data from memory, nor protect such objects from being written to the swap. In order to change the default behavior the `@ref{gnutls_global_set_mem_functions}` function is available which can be used to set other memory handlers than the defaults.

The `@acronym{Libgcrypt}` library on which `@acronym{GnuTLS}` depends, has such secure memory allocation functions available. These should be used in cases where even the system's swap memory is not considered secure. See the documentation of `@acronym{Libgcrypt}` for more information.

`@node` Callback functions

`@section` Callback Functions

`@cindex` Callback functions

There are several cases where `@acronym{GnuTLS}` may need some out of band input from your program. This is now implemented using some callback functions, which your program is expected to register.

An example of this type of functions are the push and pull callbacks which are used to specify the functions that will retrieve and send data to the transport layer.

`@itemize`

`@item @ref{gnutls_transport_set_push_function}`

`@item @ref{gnutls_transport_set_pull_function}`

`@end itemize`

Other callback functions such as the one set by `@ref{gnutls_srp_set_server_credentials_function}`, may require more complicated input, including data to be allocated. These callbacks should allocate and free memory using the functions shown below.

`@itemize`

`@item @ref{gnutls_malloc}`

`@item @ref{gnutls_free}`

`@end itemize`

`@node` Introduction to TLS

@chapter Introduction to @acronym{TLS}

@acronym{TLS} stands for "Transport Layer Security" and is the successor of SSL, the Secure Sockets Layer protocol @xcite{SSL3} designed by Netscape. @acronym{TLS} is an Internet protocol, defined by @acronym{IETF} @footnote{IETF, or Internet Engineering Task Force, is a large open international community of network designers, operators, vendors, and researchers concerned with the evolution of the Internet architecture and the smooth operation of the Internet. It is open to any interested individual.}, described in @acronym{RFC} 4346 and also in @xcite{RESCORLA}. The protocol provides confidentiality, and authentication layers over any reliable transport layer. The description, below, refers to @acronym{TLS} 1.0 but also applies to @acronym{TLS} 1.1 @xcite{RFC4346} and @acronym{SSL} 3.0, since the differences of these protocols are minor. Older protocols such as @acronym{SSL} 2.0 are not discussed nor implemented in @acronym{GnuTLS} since they are not considered secure today. GnuTLS also supports @acronym{X.509} and @acronym{OpenPGP} @xcite{RFC4880}.

@node TLS layers

@section TLS Layers

@cindex TLS Layers

@acronym{TLS} is a layered protocol, and consists of the Record Protocol, the Handshake Protocol and the Alert Protocol. The Record Protocol is to serve all other protocols and is above the transport layer. The Record protocol offers symmetric encryption, data authenticity, and optionally compression.

The Alert protocol offers some signaling to the other protocols. It can help informing the peer for the cause of failures and other error conditions. @xref{The Alert Protocol}, for more information. The alert protocol is above the record protocol.

The Handshake protocol is responsible for the security parameters' negotiation, the initial key exchange and authentication. @xref{The

Handshake Protocol}, for more information about the handshake protocol. The protocol layering in TLS is shown in the figure below.

@image{gnutls-layers,12cm,8cm}

@node The transport layer

@section The Transport Layer

@cindex Transport protocol

@acronym{TLS} is not limited to one transport layer, it can be used above any transport layer, as long as it is a reliable one. A set of functions is provided and their purpose is to load to @acronym{GnuTLS} the required callbacks to access the transport layer.

@itemize

@item @ref{gnutls_transport_set_push_function}

@item @ref{gnutls_transport_set_pull_function}

@item @ref{gnutls_transport_set_ptr}

@item @ref{gnutls_transport_set_lowat}

@item @ref{gnutls_transport_set_errno}

@end itemize

These functions accept a callback function as a parameter. The callback functions should return the number of bytes written, or -1 on error and should set @code{errno} appropriately.

In some environments, setting @code{errno} is unreliable, for example Windows have several errno variables in different CRTs, or it may be that errno is not a thread-local variable. If this is a concern to you, call @code{gnutls_transport_set_errno} with the intended errno value instead of setting @code{errno} directly.

@acronym{GnuTLS} currently only interprets the EINTR and EAGAIN errno values and returns the corresponding @acronym{GnuTLS} error codes @code{GNUTLS_E_INTERRUPTED} and @code{GNUTLS_E_AGAIN}. These values are usually returned by interrupted system calls, or when non blocking IO is used. All @acronym{GnuTLS} functions can be resumed (called again), if any of these error codes is returned. The error codes above refer to the system call, not the @acronym{GnuTLS} function, since signals do not interrupt @acronym{GnuTLS}' functions.

For non blocking sockets or other custom made pull/push functions the @ref{gnutls_transport_set_lowat} must be called, with a zero low water mark value.

By default, if the transport functions are not set, @acronym{GnuTLS} will use the Berkeley Sockets functions. In this case @acronym{GnuTLS} will use some hacks in order for @code{select} to

work, thus making it easy to add @acronym{TLS} support to existing TCP/IP servers.

@node The TLS record protocol

@section The TLS Record Protocol

@cindex Record protocol

The Record protocol is the secure communications provider. Its purpose is to encrypt, authenticate and ---optionally--- compress packets.

The following functions are available:

@table @asis

@item @ref{gnutls_record_send}:

To send a record packet (with application data).

@item @ref{gnutls_record_rcv}:

To receive a record packet (with application data).

@item @ref{gnutls_record_get_direction}:

To get the direction of the last interrupted function call.

@end table

As you may have already noticed, the functions which access the Record protocol, are quite limited, given the importance of this protocol in @acronym{TLS}. This is because the Record protocol's parameters are all set by the Handshake protocol.

The Record protocol initially starts with NULL parameters, which means no encryption, and no MAC is used. Encryption and authentication begin just after the handshake protocol has finished.

@menu

* Encryption algorithms used in the record layer::

* Compression algorithms used in the record layer::

* Weaknesses and countermeasures::

@end menu

@node Encryption algorithms used in the record layer

@subsection Encryption Algorithms Used in the Record Layer

@cindex Symmetric encryption algorithms

Confidentiality in the record layer is achieved by using symmetric block encryption algorithms like @code{3DES}, @code{AES}@footnote{AES, or Advanced Encryption Standard, is actually the RIJNDAEL algorithm.

This is the algorithm that replaced DES.), or stream algorithms like

@code{ARCFOUR_128}@footnote{@code{ARCFOUR_128} is a compatible algorithm with RSA's RC4 algorithm, which is considered to be a trade

secret.}. Ciphers are encryption algorithms that use a single, secret, key to encrypt and decrypt data. Block algorithms in TLS also provide protection against statistical analysis of the data. Thus, if you're using the @acronym{TLS} protocol, a random number of blocks will be appended to data, to prevent eavesdroppers from guessing the actual data size.

Supported cipher algorithms:

@table @code

@item 3DES_CBC

@code{3DES_CBC} is the DES block cipher algorithm used with triple encryption (EDE). Has 64 bits block size and is used in CBC mode.

@item ARCFOUR_128

ARCFOUR is a fast stream cipher.

@item ARCFOUR_40

This is the ARCFOUR cipher that is fed with a 40 bit key, which is considered weak.

@item AES_CBC

AES or RIJNDAEL is the block cipher algorithm that replaces the old DES algorithm. Has 128 bits block size and is used in CBC mode. This is not officially supported in TLS.

@end table

Supported MAC algorithms:

@table @code

@item MAC_MD5

MD5 is a cryptographic hash algorithm designed by Ron Rivest. Outputs 128 bits of data.

@item MAC_SHA

SHA is a cryptographic hash algorithm designed by NSA. Outputs 160 bits of data.

@end table

@node Compression algorithms used in the record layer

@subsection Compression Algorithms Used in the Record Layer

@cindex Compression algorithms

The TLS record layer also supports compression. The algorithms implemented in @acronym{GnuTLS} can be found in the table below.

All the algorithms except for DEFLATE which is referenced in @xcite{RFC3749}, should be considered as

@acronym{GnuTLS}' extensions@footnote{ You should use @ref{gnutls_handshake_set_private_extensions} to enable private extensions.}, and should be advertised only when the peer is known to have a compliant client, to avoid interoperability problems.

The included algorithms perform really good when text, or other compressible data are to be transferred, but offer nothing on already compressed data, such as compressed images, zipped archives etc. These compression algorithms, may be useful in high bandwidth TLS tunnels, and in cases where network usage has to be minimized. As a drawback, compression increases latency.

The record layer compression in @acronym{GnuTLS} is implemented based on the proposal @xcite{RFC3749}.

The supported compression algorithms are:

@table @code

@item DEFLATE

Zlib compression, using the deflate algorithm.

@item LZO

LZO is a very fast compression algorithm. This algorithm is only available if the @acronym{GnuTLS-extra} library has been initialized and the private extensions are enabled, and if GnuTLS was built with LZO support.

@end table

@node Weaknesses and countermeasures

@subsection Weaknesses and Countermeasures

Some weaknesses that may affect the security of the Record layer have been found in @acronym{TLS} 1.0 protocol. These weaknesses can be exploited by active attackers, and exploit the facts that

@enumerate

@item

@acronym{TLS} has separate alerts for ``decryption_failed" and ``bad_record_mac"

@item

The decryption failure reason can be detected by timing the response time.

@item

The IV for CBC encrypted packets is the last block of the previous encrypted packet.

@end enumerate

Those weaknesses were solved in @acronym{TLS} 1.1 @xcite{RFC4346} which is implemented in @acronym{GnuTLS}. For a detailed discussion see the archives of the TLS Working Group mailing list and the paper @xcite{CBCATT}.

@node The TLS Alert Protocol

@section The TLS Alert Protocol

@anchor{The Alert Protocol}

@cindex Alert protocol

The Alert protocol is there to allow signals to be sent between peers. These signals are mostly used to inform the peer about the cause of a protocol failure. Some of these signals are used internally by the protocol and the application protocol does not have to cope with them (see @code{GNUTLS_A_CLOSE_NOTIFY}), and others refer to the application protocol solely (see @code{GNUTLS_A_USER_CANCELLED}). An alert signal includes a level indication which may be either fatal or warning. Fatal alerts always terminate the current connection, and prevent future renegotiations using the current session ID.

The alert messages are protected by the record protocol, thus the information that is included does not leak. You must take extreme care for the alert information not to leak to a possible attacker, via public log files etc.

@table @asis

@item @ref{gnutls_alert_send}:

To send an alert signal.

@item @ref{gnutls_error_to_alert}:

To map a gnutls error number to an alert signal.

@item @ref{gnutls_alert_get}:

Returns the last received alert.

@item @ref{gnutls_alert_get_name}:

Returns the name, in a character array, of the given alert.

@end table

@node The TLS Handshake Protocol

@section The TLS Handshake Protocol

@anchor{The Handshake Protocol}

@cindex Handshake protocol

The Handshake protocol is responsible for the ciphersuite negotiation,

the initial key exchange, and the authentication of the two peers. This is fully controlled by the application layer, thus your program has to set up the required parameters. Available functions to control the handshake protocol include:

@table @asis

@item @ref{gnutls_priority_init}:

To initialize a priority set of ciphers.

@item @ref{gnutls_priority_deinit}:

To deinitialize a priority set of ciphers.

@item @ref{gnutls_priority_set}:

To associate a priority set with a @acronym{TLS} session.

@item @ref{gnutls_priority_set_direct}:

To directly associate a session with a given priority string.

@item @ref{gnutls_credentials_set}:

To set the appropriate credentials structures.

@item @ref{gnutls_certificate_server_set_request}:

To set whether client certificate is required or not.

@item @ref{gnutls_handshake}:

To initiate the handshake.

@end table

@subsection TLS Cipher Suites

The Handshake Protocol of @acronym{TLS} negotiates cipher suites of the form @code{TLS_DHE_RSA_WITH_3DES_CBC_SHA}. The usual cipher suites contain these parameters:

@itemize

@item The key exchange algorithm.

@code{DHE_RSA} in the example.

@item The Symmetric encryption algorithm and mode

@code{3DES_CBC} in this example.

@item The MAC@footnote{MAC stands for Message Authentication Code. It can be described as a keyed hash algorithm. See RFC2104.} algorithm used for authentication.

@code{MAC_SHA} is used in the above example.

@end itemize

The cipher suite negotiated in the handshake protocol will affect the Record Protocol, by enabling encryption and data authentication. Note that you should not over rely on @acronym{TLS} to negotiate the strongest available cipher suite. Do not enable ciphers and algorithms that you consider weak.

The priority functions, discussed above, allow the application layer to enable and set priorities on the individual ciphers. It may imply that all combinations of ciphersuites are allowed, but this is not true. For several reasons, not discussed here, some combinations were not defined in the @acronym{TLS} protocol. The supported ciphersuites are shown in @ref{ciphersuites}.

@subsection Client Authentication
@cindex Client Certificate authentication

In the case of ciphersuites that use certificate authentication, the authentication of the client is optional in @acronym{TLS}. A server may request a certificate from the client --- using the @ref{gnutls_certificate_server_set_request} function. If a certificate is to be requested from the client during the handshake, the server will send a certificate request message that contains a list of acceptable certificate signers. In @acronym{GnuTLS} the certificate signers list is constructed using the trusted Certificate Authorities by the server. That is the ones set using @itemize
@item @ref{gnutls_certificate_set_x509_trust_file}
@item @ref{gnutls_certificate_set_x509_trust_mem}
@end itemize

Sending of the names of the CAs can be controlled using @ref{gnutls_certificate_send_x509_rdn_sequence}. The client, then, may send a certificate, signed by one of the server's acceptable signers.

@subsection Resuming Sessions
@anchor{resume}
@cindex Resuming sessions

The @ref{gnutls_handshake} function, is expensive since a lot of calculations are performed. In order to support many fast connections to the same server a client may use session resuming. @strong{Session resuming} is a feature of the @acronym{TLS} protocol which allows a client to connect to a server, after a successful handshake, without the expensive calculations. This is achieved by using the previously established keys. @acronym{GnuTLS} supports this feature, and the example (@pxref{ex:resume-client}) illustrates a typical use of it.

Keep in mind that sessions are expired after some time, for security reasons, thus it may be normal for a server not to resume a session even if you requested that. Also note that you must enable, using the priority functions, at least the algorithms used in the last session.

@subsection Resuming Internals

The resuming capability, mostly in the server side, is one of the problems of a thread-safe TLS implementations. The problem is that all threads must share information in order to be able to resume sessions. The gnutls approach is, in case of a client, to leave all the burden of resuming to the client. I.e., copy and keep the necessary parameters. See the functions:

@itemize

@item @ref{gnutls_session_get_data}

@item @ref{gnutls_session_get_id}

@item @ref{gnutls_session_set_data}

@end itemize

The server side is different. A server has to specify some callback functions which store, retrieve and delete session data. These can be registered with:

@itemize

@item @ref{gnutls_db_set_remove_function}

@item @ref{gnutls_db_set_store_function}

@item @ref{gnutls_db_set_retrieve_function}

@item @ref{gnutls_db_set_ptr}

@end itemize

It might also be useful to be able to check for expired sessions in order to remove them, and save space. The function @ref{gnutls_db_check_entry} is provided for that reason.

@node TLS Extensions

@section TLS Extensions

@cindex TLS Extensions

A number of extensions to the @acronym{TLS} protocol have been proposed mainly in @xcite{TLSEXT}. The extensions supported in @acronym{GnuTLS} are:

```
@itemize
@item Maximum fragment length negotiation
@item Server name indication
@end itemize
```

and they will be discussed in the subsections that follow.

```
@subsection Maximum Fragment Length Negotiation
@cindex TLS Extensions
@cindex Maximum fragment length
```

This extension allows a @acronym{TLS} implementation to negotiate a smaller value for record packet maximum length. This extension may be useful to clients with constrained capabilities. See the

```
@ref{gnutls_record_set_max_size} and the
@ref{gnutls_record_get_max_size} functions.
```

```
@subsection Server Name Indication
@anchor{serverind}
@cindex TLS Extensions
@cindex Server name indication
```

A common problem in @acronym{HTTPS} servers is the fact that the @acronym{TLS} protocol is not aware of the hostname that a client connects to, when the handshake procedure begins. For that reason the @acronym{TLS} server has no way to know which certificate to send.

This extension solves that problem within the @acronym{TLS} protocol, and allows a client to send the HTTP hostname before the handshake begins within the first handshake packet. The functions @ref{gnutls_server_name_set} and @ref{gnutls_server_name_get} can be used to enable this extension, or to retrieve the name sent by a client.

```
@node Selecting cryptographic key sizes
@section Selecting Cryptographic Key Sizes
@cindex key sizes
```

In TLS, since a lot of algorithms are involved, it is not easy to set a consistent security level. For this reason this section will present some correspondance between key sizes of symmetric algorithms and public key algorithms based on the most conservative values of @xcite{SELKEY}. Those can be used to generate certificates with appropriate key sizes as well as parameters for Diffie-Hellman and SRP authentication.

@multitable @columnfractions .15 .20 .20 .20

@end multitable

The first column provides an estimation of the year until these parameters are considered safe and the rest of the columns list the parameters for the various algorithms.

Note however that the values suggested here are nothing more than an educated guess that is valid today. There are no guarantees that an algorithm will remain unbreakable or that these values will remain constant in time. There could be scientific breakthroughs that cannot be predicted or total failure of the current public key systems by quantum computers. On the other hand though the cryptosystems used in TLS are selected in a conservative way and such catastrophic breakthroughs or failures are believed to be unlikely.

NIST publication SP 800-57 [@xcite{NISTSP80057}](#) contains a similar table that extends beyond the key sizes given above.

`@node On SSL 2 and older protocols`

`@section On SSL 2 and Older Protocols`

@cindex SSL 2

One of the initial decisions in the @acronym{GnuTLS} development was to implement the known security protocols for the transport layer. Initially @acronym{TLS} 1.0 was implemented since it was the latest at that time, and was considered to be the most advanced in security properties. Later the @acronym{SSL} 3.0 protocol was implemented since it is still the only protocol supported by several servers and there are no serious security vulnerabilities known.

One question that may arise is why we didn't implement @acronym{SSL} 2.0 in the library. There are several reasons, most important being that it has serious security flaws, unacceptable for a modern security library. Other than that, this protocol is barely used by anyone these days since it has been deprecated since 1996. The security problems in @acronym{SSL} 2.0 include:

@itemize

@item Message integrity compromised.

The @acronym{SSLv2} message authentication uses the MD5 function, and is insecure.

@item Man-in-the-middle attack.

There is no protection of the handshake in @acronym{SSLv2}, which permits a man-in-the-middle attack.

@item Truncation attack.

@acronym{SSLv2} relies on TCP FIN to close the session, so the attacker can forge a TCP FIN, and the peer cannot tell if it was a legitimate end of data or not.

@item Weak message integrity for export ciphers.

The cryptographic keys in @acronym{SSLv2} are used for both message authentication and encryption, so if weak encryption schemes are negotiated (say 40-bit keys) the message authentication code use the same weak key, which isn't necessary.

@end itemize

@cindex PCT

Other protocols such as Microsoft's @acronym{PCT} 1 and @acronym{PCT} 2 were not implemented because they were also abandoned and deprecated by @acronym{SSL} 3.0 and later @acronym{TLS} 1.0.

@node On Record Padding

@section On Record Padding

@cindex Record padding

@cindex Bad record MAC

The TLS protocol allows for random padding of records, to make it more difficult to perform analysis on the length of exchanged messages. (In RFC 4346 this is specified in section 6.2.3.2.) GnuTLS appears to be one of few implementation that take advantage of this text, and pad records by a random length.

The TLS implementation in the Symbian operating system, frequently used by Nokia and Sony-Ericsson mobile phones, cannot handle non-minimal record padding. What happens when one of these clients handshake with a GnuTLS server is that the client will fail to compute the correct MAC for the record. The client sends a TLS alert (@code{bad_record_mac}) and disconnects. Typically this will result in error messages such as 'A TLS fatal alert has been received', 'Bad record MAC', or both, on the GnuTLS server side.

GnuTLS implements a work around for this problem. However, it has to be enabled specifically. It can be enabled by using @ref{gnutls_record_disable_padding}, or @ref{gnutls_priority_set} with the @code{%COMPAT} priority string.

If you implement an application that have a configuration file, we recommend that you make it possible for users or administrators to specify a GnuTLS protocol priority string, which is used by your application via @ref{gnutls_priority_set}. To allow the best flexibility, make it possible to have a different priority string for different incoming IP addresses.

To enable the workaround in the @code{gnutls-cli} client or the @code{gnutls-serv} server, for testing of other implementations, use the following parameter: @code{--priority "%COMPAT"}.

This problem has been discussed on mailing lists and in bug reports. This section tries to collect all pieces of information that we know about the problem. If you wish to go back to the old discussions, here are some links:

@url{http://bugs.debian.org/390712}

@url{http://bugs.debian.org/402861}

@node Authentication methods

@chapter Authentication Methods

The @acronym{TLS} protocol provides confidentiality and encryption, but also offers authentication, which is a prerequisite for a secure connection. The available authentication methods in @acronym{GnuTLS} are:

@itemize

@item Certificate authentication

@item Anonymous authentication

@item @acronym{SRP} authentication

@item @acronym{PSK} authentication

@end itemize

@menu

* Certificate authentication::

* Anonymous authentication::

* Authentication using SRP::

* Authentication using PSK::

* Authentication and credentials::

* Parameters stored in credentials::

@end menu

@node Certificate authentication

@section Certificate Authentication

@subsection Authentication Using @acronym{X.509} Certificates

@cindex @acronym{X.509} certificates

@acronym{X.509} certificates contain the public parameters, of a public key algorithm, and an authority's signature, which proves the authenticity of the parameters. @xref{The X.509 trust model}, for more information on @acronym{X.509} protocols.

@subsection Authentication Using @acronym{OpenPGP} Keys

@cindex @acronym{OpenPGP} Keys

@acronym{OpenPGP} keys also contain public parameters of a public key algorithm, and signatures from several other parties. Depending on whether a signer is trusted the key is considered trusted or not.

@acronym{GnuTLS}'s @acronym{OpenPGP} authentication implementation is based on the @xcite{TLSPGP} proposal.

@xref{The OpenPGP trust model}, for more information about the

@acronym{OpenPGP} trust model. For a more detailed introduction to @acronym{OpenPGP} and @acronym{GnuPG} see @xcite{GPGH}.

@subsection Using Certificate Authentication

In @acronym{GnuTLS} both the @acronym{OpenPGP} and @acronym{X.509} certificates are part of the certificate authentication and thus are handled using a common API.

When using certificates the server is required to have at least one certificate and private key pair. A client may or may not have such a pair. The certificate and key pair should be loaded, before any @acronym{TLS} session is initialized, in a certificate credentials structure. This should be done by using @ref{gnutls_certificate_set_x509_key_file} or @ref{gnutls_certificate_set_openpgp_key_file} depending on the certificate type. In the @acronym{X.509} case, the functions will also accept and use a certificate list that leads to a trusted authority. The certificate list must be ordered in such way that every certificate certifies the one before it. The trusted authority's certificate need not to be included, since the peer should possess it already.

As an alternative, a callback may be used so the server or the client specify the certificate and the key at the handshake time. That callback can be set using the functions:

@itemize

@item @ref{gnutls_certificate_server_set_retrieve_function}

@item @ref{gnutls_certificate_client_set_retrieve_function}

@end itemize

Certificate verification is possible by loading the trusted authorities into the credentials structure by using @ref{gnutls_certificate_set_x509_trust_file} or @ref{gnutls_certificate_set_openpgp_keyring_file} for openpgp keys. Note however that the peer's certificate is not automatically verified, you should call @ref{gnutls_certificate_verify_peers2}, after a successful handshake, to verify the signatures of the certificate. An alternative way, which reports a more detailed verification output, is to use @ref{gnutls_certificate_get_peers} to obtain the raw certificate of the peer and verify it using the functions discussed in @ref{The X.509 trust model}.

In a handshake, the negotiated cipher suite depends on the

certificate's parameters, so not all key exchange methods will be available with some certificates. `@acronym{GnuTLS}` will disable ciphersuites that are not compatible with the key, or the enabled authentication methods. For example keys marked as sign-only, will not be able to access the plain RSA ciphersuites, but only the `@code{DHE_RSA}` ones. It is recommended not to use RSA keys for both signing and encryption. If possible use the same key for the `@code{DHE_RSA}` and `@code{RSA_EXPORT}` ciphersuites, which use signing, and a different key for the plain RSA ciphersuites, which use encryption. All the key exchange methods shown below are available in certificate authentication.

Note that the DHE key exchange methods are generally slower^{@footnote{It really depends on the group used. Primes with lesser bits are always faster, but also easier to break. Values less than 768 should not be used today}} than plain RSA and require Diffie Hellman parameters to be generated and associated with a credentials structure, by the server. The `@code{RSA-EXPORT}` method also requires 512 bit RSA parameters, that should also be generated and associated with the credentials structure. See the functions:

`@itemize`

`@item @ref{gnutls_dh_params_generate2}`

`@item @ref{gnutls_certificate_set_dh_params}`

`@end itemize`

Sometimes in order to avoid bottlenecks in programs it is usefull to store and read parameters from formats that can be generated by external programs such as `@code{certtool}`. This is possible with `@acronym{GnuTLS}` by using the following functions:

`@itemize`

`@item @ref{gnutls_dh_params_import_pkcs3}`

`@item @ref{gnutls_rsa_params_import_pkcs1}`

`@item @ref{gnutls_dh_params_export_pkcs3}`

`@item @ref{gnutls_rsa_params_export_pkcs1}`

@end itemize

Key exchange algorithms for @acronym{OpenPGP} and @acronym{X.509} certificates:

@table @code

@item RSA:

The RSA algorithm is used to encrypt a key and send it to the peer. The certificate must allow the key to be used for encryption.

@item RSA_EXPORT:

The RSA algorithm is used to encrypt a key and send it to the peer. In the EXPORT algorithm, the server signs temporary RSA parameters of 512 bits --- which are considered weak --- and sends them to the client.

@item DHE_RSA:

The RSA algorithm is used to sign Ephemeral Diffie-Hellman parameters which are sent to the peer. The key in the certificate must allow the key to be used for signing. Note that key exchange algorithms which use Ephemeral Diffie-Hellman parameters, offer perfect forward secrecy. That means that even if the private key used for signing is compromised, it cannot be used to reveal past session data.

@item DHE_DSS:

The DSS algorithm is used to sign Ephemeral Diffie-Hellman parameters which are sent to the peer. The certificate must contain DSA parameters to use this key exchange algorithm. DSS stands for Digital Signature Standard.

@end table

@node Anonymous authentication

@section Anonymous Authentication

@cindex Anonymous authentication

The anonymous key exchange performs encryption but there is no indication of the identity of the peer. This kind of authentication is vulnerable to a man in the middle attack, but this protocol can be used even if there is no prior communication and trusted parties with the peer, or when full anonymity is required. Unless really required, do not use anonymous authentication. Available key exchange methods are shown below.

Note that the key exchange methods for anonymous authentication require Diffie-Hellman parameters to be generated by the server and associated with an anonymous credentials structure.

Supported anonymous key exchange algorithms:

@table @code

@item ANON_DH:

This algorithm exchanges Diffie-Hellman parameters.

@end table

@node Authentication using SRP

@section Authentication using @acronym{SRP}

@cindex @acronym{SRP} authentication

Authentication via the Secure Remote Password protocol,

@acronym{SRP} @footnote{ @acronym{SRP} is described in @xcite{RFC2945} },

is supported. The @acronym{SRP} key exchange is an extension to the

@acronym{TLS} protocol, and it is a password based authentication

(unlike @acronym{X.509} or @acronym{OpenPGP} that use certificates).

The two peers can be identified using a single password, or there can

be combinations where the client is authenticated using @acronym{SRP}

and the server using a certificate.

The advantage of @acronym{SRP} authentication, over other proposed secure password authentication schemes, is that @acronym{SRP} does not

require the server to hold the user's password. This kind of

protection is similar to the one used traditionally in the @emph{UNIX}

@file{/etc/passwd} file, where the contents of this file did not cause

harm to the system security if they were revealed. The @acronym{SRP}

needs instead of the plain password something called a verifier, which

is calculated using the user's password, and if stolen cannot be used

to impersonate the user. Check @xcite{TOMSRP} for a detailed description

of the @acronym{SRP} protocol and the Stanford @acronym{SRP}

libraries, which includes a PAM module that synchronizes the system's

users passwords with the @acronym{SRP} password files. That way

@acronym{SRP} authentication could be used for all the system's users.

The implementation in @acronym{GnuTLS} is based on paper

@xcite{TLSSRP}. The supported @acronym{SRP} key exchange methods are:

@table @code

@item SRP:

Authentication using the @acronym{SRP} protocol.

@item SRP_DSS:

Client authentication using the @acronym{SRP} protocol. Server is authenticated using a certificate with DSA parameters.

@item SRP_RSA:

Client authentication using the @acronym{SRP} protocol. Server is authenticated using a certificate with RSA parameters.

@end table

If clients supporting @acronym{SRP} know the username and password before the connection, should initialize the client credentials and call the function @ref{gnutls_srp_set_client_credentials}.

Alternatively they could specify a callback function by using the function @ref{gnutls_srp_set_client_credentials_function}. This has the advantage that allows probing the server for @acronym{SRP} support. In that case the callback function will be called twice per handshake. The first time is before the ciphersuite is negotiated, and if the callback returns a negative error code, the callback will be called again if @acronym{SRP} has been negotiated. This uses a special @acronym{TLS}-@acronym{SRP} handshake idiom in order to avoid, in interactive applications, to ask the user for @acronym{SRP} password and username if the server does not negotiate an @acronym{SRP} ciphersuite.

In server side the default behaviour of @acronym{GnuTLS} is to read the usernames and @acronym{SRP} verifiers from password files. These password files are the ones used by the @emph{Stanford srp libraries} and can be specified using the @ref{gnutls_srp_set_server_credentials_file}. If a different password file format is to be used, then the function @ref{gnutls_srp_set_server_credentials_function}, should be called, in order to set an appropriate callback.

Some helper functions such as

@itemize

@item @ref{gnutls_srp_verifier}

@item @ref{gnutls_srp_base64_encode}

@item @ref{gnutls_srp_base64_decode}

@end itemize

are included in @acronym{GnuTLS}, and can be used to generate and maintain @acronym{SRP} verifiers and password files. A program to manipulate the required parameters for @acronym{SRP} authentication is also included. @xref{srptool}, for more information.

@node Authentication using PSK
@section Authentication using @acronym{PSK}
@cindex @acronym{PSK} authentication

Authentication using Pre-shared keys is a method to authenticate using usernames and binary keys. This protocol avoids making use of public key infrastructure and expensive calculations, thus it is suitable for constraint clients.

The implementation in @acronym{GnuTLS} is based on paper @xcite{TLSPSK}. The supported @acronym{PSK} key exchange methods are:

@table @code

@item PSK:
Authentication using the @acronym{PSK} protocol.

@item DHE-PSK:
Authentication using the @acronym{PSK} protocol and Diffie-Hellman key exchange. This method offers perfect forward secrecy.

@end table

Clients supporting @acronym{PSK} should supply the username and key before the connection to the client credentials by calling the function @ref{gnutls_psk_set_client_credentials}. Alternatively they could specify a callback function by using the function @ref{gnutls_psk_set_client_credentials_function}. This has the advantage that the callback will be called only if @acronym{PSK} has been negotiated.

In server side the default behaviour of @acronym{GnuTLS} is to read the usernames and @acronym{PSK} keys from a password file. The password file should contain usernames and keys in hexadecimal format. The name of the password file can be stored to the credentials structure by calling @ref{gnutls_psk_set_server_credentials_file}. If a different password file format is to be used, then the function @ref{gnutls_psk_set_server_credentials_function}, should be used instead.

The server can help the client chose a suitable username and password, by sending a hint. In the server, specify the hint by calling @ref{gnutls_psk_set_server_credentials_hint}. The client can retrieve the hint, for example in the callback function, using @ref{gnutls_psk_client_get_hint}.

There is no standard mechanism to derive a PSK key from a password specified by the TLS PSK document. However, GnuTLS provides @ref{gnutls_psk_netconf_derive_key} which follows the algorithm specified in @file{draft-ietf-netconf-tls-02.txt}.

Some helper functions such as:

```
@itemize
```

```
@item @ref{gnutls_hex_encode}
```

```
@item @ref{gnutls_hex_decode}
```

```
@end itemize
```

are included in `@acronym{GnuTLS}`, and may be used to generate and maintain `@acronym{PSK}` keys.

```
@node Authentication and credentials
```

```
@section Authentication and Credentials
```

In `@acronym{GnuTLS}` every key exchange method is associated with a credentials type. So in order to enable a specific method, the corresponding credentials type should be initialized and set using `@ref{gnutls_credentials_set}`. A mapping is shown below.

@node Parameters stored in credentials
```

```
@section Parameters Stored in Credentials
```

Several parameters such as the ones used for Diffie-Hellman authentication are stored within the credentials structures, so all sessions can access them. Those parameters are stored in structures such as `gnutls_dh_params_t` and `gnutls_rsa_params_t`, and functions like `gnutls_certificate_set_dh_params` and `gnutls_certificate_set_rsa_export_params` can be used to associate those parameters with the given credentials structure.

Since those parameters need to be renewed from time to time and a global structure such as the credentials, may not be easy to modify since it is accessible by all sessions, an alternative interface is available using a callback function. This can be set using the `gnutls_certificate_set_params_function`. An example is shown below.

```
@example
```

```
#include <gnutls.h>
```

```
gnutls_rsa_params_t rsa_params;
```

```
gnutls_dh_params_t dh_params;
```

```
/* This function will be called once a session requests DH  
* or RSA parameters. The parameters returned (if any) will  
* be used for the first handshake only.
```

```
*/
```

```
static int get_params( gnutls_session_t session,
```

```
    gnutls_params_type_t type,
```

```
    gnutls_params_st *st)
```

```
@{
```

```
if (type == GNUTLS_PARAMS_RSA_EXPORT)
```

```
    st->params.rsa_export = rsa_params;
```

```
else if (type == GNUTLS_PARAMS_DH)
```

```
    st->params.dh = dh_params;
```

```
else return -1;
```

```
st->type = type;
```

```

/* do not deinitialize those parameters.
*/
st->deinit = 0;

return 0;
@}

int main()
@{
    gnutls_certificate_credentials_t cert_cred;

    initialize_params();

    /* ...
    */

    gnutls_certificate_set_params_function( cert_cred, get_params);
@}
@end example

```

* Digital signatures::
@end menu

```

```

@node The X.509 trust model
@section The @acronym{X.509} Trust Model
@cindex @acronym{X.509} certificates

```

The @acronym{X.509} protocols rely on a hierarchical trust model. In this trust model Certification Authorities (CAs) are used to certify entities. Usually more than one certification authorities exist, and certification authorities may certify other authorities to issue certificates as well, following a hierarchical model.

```
@image{gnutls-x509,7cm,9.5cm}
```

One needs to trust one or more CAs for his secure communications. In that case only the certificates issued by the trusted authorities are acceptable. See the figure above for a typical example. The API for handling @acronym{X.509} certificates is described at section @ref{sec:x509api}. Some examples are listed below.

```
@menu
* X.509 certificates::
* Verifying X.509 certificate paths::
* PKCS #10 certificate requests::
* PKCS #12 structures::
@end menu
```

```
@node X.509 certificates
@subsection @acronym{X.509} Certificates
```

An @acronym{X.509} certificate usually contains information about the certificate holder, the signer, a unique serial number, expiration dates and some other fields @xcite{RFC3280} as shown in the table below.

```
@table @code
```

```
@item version:
The field that indicates the version of the certificate.
```

```
@item serialNumber:
This field holds a unique serial number per certificate.
```

```
@item issuer:
Holds the issuer's distinguished name.
```

```
@item validity:
The activation and expiration dates.
```

```
@item subject:
The subject's distinguished name of the certificate.
```

```
@item extensions:
The extensions are fields only present in version 3 certificates.
```

```
@end table
```

The certificate's @emph{subject or issuer name} is not just a single string. It is a Distinguished name and in the @acronym{ASN.1} notation is a sequence of several object IDs with their corresponding values. Some of available OIDs to be used in an @acronym{X.509} distinguished name are defined in @file{gnutls/x509.h}.

The @emph{Version} field in a certificate has values either 1 or 3 for version 3 certificates. Version 1 certificates do not support the extensions field so it is not possible to distinguish a CA from a person, thus their usage should be avoided.

The @emph{validity} dates are there to indicate the date that the specific certificate was activated and the date the certificate's key would be considered invalid.

Certificate @emph{extensions} are there to include information about the certificate's subject that did not fit in the typical certificate fields. Those may be e-mail addresses, flags that indicate whether the belongs to a CA etc. All the supported @acronym{X.509} version 3 extensions are shown in the table below.

@table @code

@item subject key id (2.5.29.14):

An identifier of the key of the subject.

@item authority key id (2.5.29.35):

An identifier of the authority's key used to sign the certificate.

@item subject alternative name (2.5.29.17):

Alternative names to subject's distinguished name.

@item key usage (2.5.29.15):

Constraints the key's usage of the certificate.

@item extended key usage (2.5.29.37):

Constraints the purpose of the certificate.

@item basic constraints (2.5.29.19):

Indicates whether this is a CA certificate or not, and specify the maximum path lengths of certificate chains.

@item CRL distribution points (2.5.29.31):

This extension is set by the CA, in order to inform about the issued CRLs.

@item Proxy Certification Information (1.3.6.1.5.5.7.1.14):

Proxy Certificates includes this extension that contains the OID of the proxy policy language used, and can specify limits on the maximum lengths of proxy chains. Proxy Certificates are specified in @xcite{RFC3820}.

@end table

In @acronym{GnuTLS} the @acronym{X.509} certificate structures are handled using the @code{gnutls_x509_cert_t} type and the corresponding private keys with the @code{gnutls_x509_privkey_t} type. All the available functions for @acronym{X.509} certificate handling have their prototypes in @file{gnutls/x509.h}. An example program to demonstrate the @acronym{X.509}

parsing capabilities can be found at section @ref{ex:x509-info}.

@node Verifying X.509 certificate paths

@subsection Verifying @acronym{X.509} Certificate Paths

@cindex Verifying certificate paths

Verifying certificate paths is important in @acronym{X.509} authentication. For this purpose the function @ref{gnutls_x509_cert_verify} is provided. The output of this function is the bitwise OR of the elements of the @code{gnutls_certificate_status_t} enumeration. A detailed description of these elements can be found in figure below. The function @ref{gnutls_certificate_verify_peers2} is equivalent to the previous one, and will verify the peer's certificate in a TLS session.

@table @code

@item CERT_INVALID:

The certificate is not signed by one of the known authorities, or the signature is invalid.

@item CERT_REVOKED:

The certificate has been revoked by its CA.

@item CERT_SIGNER_NOT_FOUND:

The certificate's issuer is not known. This is the case when the issuer is not in the trusted certificates list.

@item GNUTLS_CERT_SIGNER_NOT_CA:

The certificate's signer was not a CA. This may happen if this was a version 1 certificate, which is common with some CAs, or a version 3 certificate without the basic constraints extension.

@anchor{GNUTLS_CERT_INSECURE_ALGORITHM}

@item GNUTLS_CERT_INSECURE_ALGORITHM:

The certificate was signed using an insecure algorithm such as MD2 or MD5. These algorithms have been broken and should not be trusted.

@end table

There is also to possibility to pass some input to the verification functions in the form of flags. For @ref{gnutls_x509_cert_verify} the flags are passed straightforward, but @ref{gnutls_certificate_verify_peers2} depends on the flags set by calling @ref{gnutls_certificate_set_verify_flags}. All the available flags are part of the enumeration @ref{gnutls_certificate_verify_flags} and are explained in the table below.

@anchor{gnutls_certificate_verify_flags}

@tindex gnutls_certificate_verify_flags

@table @code

@item GNUTLS_VERIFY_DISABLE_CA_SIGN:

If set a signer does not have to be a certificate authority. This flag should normally be disabled, unless you know what this means.

@item GNUTLS_VERIFY_ALLOW_X509_V1_CA_CERT:

Allow only trusted CA certificates that have version 1. This is safer than GNUTLS_VERIFY_ALLOW_ANY_X509_V1_CA_CERT, and should be used instead. That way only signers in your trusted list will be allowed to have certificates of version 1.

@item GNUTLS_VERIFY_ALLOW_ANY_X509_V1_CA_CERT:

Allow CA certificates that have version 1 (both root and intermediate). This is dangerous since those haven't the basicConstraints extension. Must be used in combination with GNUTLS_VERIFY_ALLOW_X509_V1_CA_CERT.

@item GNUTLS_VERIFY_DO_NOT_ALLOW_SAME:

If a certificate is not signed by anyone trusted but exists in the trusted CA list do not treat it as trusted.

@item GNUTLS_VERIFY_ALLOW_SIGN_RSA_MD2:

Allow certificates to be signed using the old MD2 algorithm.

@item GNUTLS_VERIFY_ALLOW_SIGN_RSA_MD5:

Allow certificates to be signed using the broken MD5 algorithm.

@end table

Although the verification of a certificate path indicates that the certificate is signed by trusted authority, does not reveal anything about the peer's identity. It is required to verify if the certificate's owner is the one you expect. For more information consult @xcite{RFC2818} and section @ref{ex:verify} for an example.

@node PKCS #10 certificate requests

@subsection @acronym{PKCS} #10 Certificate Requests

@cindex Certificate requests

@cindex @acronym{PKCS} #10

A certificate request is a structure, which contain information about an applicant of a certificate service. It usually contains a private key, a distinguished name and secondary data such as a challenge password. @acronym{GnuTLS} supports the requests defined in @acronym{PKCS} #10 @xcite{RFC2986}. Other certificate request's format such as PKIX's @xcite{RFC4211} are not currently supported.

In @acronym{GnuTLS} the @acronym{PKCS} #10 structures are handled using the @code{gnutls_x509_crq_t} type. An example of a certificate request generation can be found at section @ref{ex:crq}.

@node PKCS #12 structures
@subsection @acronym{PKCS} #12 Structures
@cindex @acronym{PKCS} #12

A @acronym{PKCS} #12 structure @xcite{PKCS12} usually contains a user's private keys and certificates. It is commonly used in browsers to export and import the user's identities.

In @acronym{GnuTLS} the @acronym{PKCS} #12 structures are handled using the @code{gnutls_pkcs12_t} type. This is an abstract type that may hold several @code{gnutls_pkcs12_bag_t} types. The Bag types are the holders of the actual data, which may be certificates, private keys or encrypted data. An Bag of type encrypted should be decrypted in order for its data to be accessed.

An example of a @acronym{PKCS} #12 structure generation can be found at section @ref{ex:pkcs12}.

@node The OpenPGP trust model
@section The @acronym{OpenPGP} Trust Model
@cindex @acronym{OpenPGP} Keys

The @acronym{OpenPGP} key authentication relies on a distributed trust model, called the ``web of trust''. The ``web of trust'' uses a decentralized system of trusted introducers, which are the same as a CA. @acronym{OpenPGP} allows anyone to sign anyone's else public key. When Alice signs Bob's key, she is introducing Bob's key to anyone who trusts Alice. If someone trusts Alice to introduce keys, then Alice is a trusted introducer in the mind of that observer.

@image{gnutls-pgp,11cm,9cm}

For example: If David trusts Alice to be an introducer, and Alice signed Bob's key, Dave also trusts Bob's key to be the real one.

There are some key points that are important in that model. In the example Alice has to sign Bob's key, only if she is sure that the key belongs to Bob. Otherwise she may also make Dave falsely believe that this is Bob's key. Dave has also the responsibility to know who to trust. This model is similar to real life relations.

Just see how Charlie behaves in the previous example. Although he has signed Bob's key - because he knows, somehow, that it belongs to Bob -

he does not trust Bob to be an introducer. Charlie decided to trust only Kevin, for some reason. A reason could be that Bob is lazy enough, and signs other people's keys without being sure that they belong to the actual owner.

@subsection @acronym{OpenPGP} Keys

In @acronym{GnuTLS} the @acronym{OpenPGP} key structures @xcite{RFC2440} are handled using the @code{gnutls_openpgp_cert_t} type and the corresponding private keys with the @code{gnutls_openpgp_privkey_t} type. All the prototypes for the key handling functions can be found at @file{gnutls/openpgp.h}.

@subsection Verifying an @acronym{OpenPGP} Key

The verification functions of @acronym{OpenPGP} keys, included in @acronym{GnuTLS}, are simple ones, and do not use the features of the ``web of trust''. For that reason, if the verification needs are complex, the assistance of external tools like @acronym{GnuPG} and GPGME (@url{http://www.gnupg.org/related_software/gpgme/}) is recommended.

There is one verification function in @acronym{GnuTLS}, the @ref{gnutls_openpgp_cert_verify_ring}.

This checks an @acronym{OpenPGP} key against a given set of public keys (keyring) and returns the key status. The key verification status is the same as in @acronym{X.509} certificates, although the meaning and interpretation are different. For example an @acronym{OpenPGP} key may be valid, if the self signature is ok, even if no signers were found. The meaning of verification status is shown in the figure below.

@table @code

@item CERT_INVALID:

A signature on the key is invalid. That means that the key was modified by somebody, or corrupted during transport.

@item CERT_REVOKED:

The key has been revoked by its owner.

@item CERT_SIGNER_NOT_FOUND:

The key was not signed by a known signer.

@item GNUTLS_CERT_INSECURE_ALGORITHM:

The certificate was signed using an insecure algorithm such as MD2 or MD5. These algorithms have been broken and should not be trusted.

@end table

@node Digital signatures
@section Digital Signatures
@cindex Digital signatures

In this section we will provide some information about digital signatures, how they work, and give the rationale for disabling some of the algorithms used.

Digital signatures work by using somebody's secret key to sign some arbitrary data. Then anybody else could use the public key of that person to verify the signature. Since the data may be arbitrary it is not suitable input to a cryptographic digital signature algorithm. For this reason and also for performance cryptographic hash algorithms are used to preprocess the input to the signature algorithm. This works as long as it is difficult enough to generate two different messages with the same hash algorithm output. In that case the same signature could be used as a proof for both messages. Nobody wants to sign an innocent message of donating 1 @euro{} to Greenpeace and find out that he donated 1.000.000 @euro{} to Bad Inc.

For a hash algorithm to be called cryptographic the following three requirements must hold:

@enumerate

@item Preimage resistance.

That means the algorithm must be one way and given the output of the hash function @math{H(x)}, it is impossible to calculate @math{x}.

@item 2nd preimage resistance.

That means that given a pair @math{x,y} with @math{y=H(x)} it is impossible to calculate an @math{x'} such that @math{y=H(x')}.

@item Collision resistance.

That means that it is impossible to calculate random @math{x} and @math{x'} such @math{H(x')=H(x)}.

@end enumerate

The last two requirements in the list are the most important in digital signatures. These protect against somebody who would like to generate two messages with the same hash output. When an algorithm is considered broken usually it means that the Collision resistance of the algorithm is less than brute force. Using the birthday paradox the brute force attack takes

@iftex

@math{2^{\lfloor \text{hash size} \rfloor / 2}}

@end iftex

@ifnottex

`@math{2^{\lceil(\text{hash size}) / 2\rceil}}`

`@end ifnottex`

operations. Today colliding certificates using the MD5 hash algorithm have been generated as shown in `@xcite{WEGER}`.

There has been cryptographic results for the SHA-1 hash algorithms as well, although they are not yet critical. Before 2004, MD5 had a presumed collision strength of `@math{2^{64}}`, but it has been showed to have a collision strength well under `@math{2^{50}}`. As of November 2005, it is believed that SHA-1's collision strength is around `@math{2^{63}}`. We consider this sufficiently hard so that we still support SHA-1. We anticipate that SHA-256/386/512 will be used in publicly-distributed certificates in the future. When `@math{2^{63}}` can be considered too weak compared to the computer power available sometime in the future, SHA-1 will be disabled as well. The collision attacks on SHA-1 may also get better, given the new interest in tools for creating them.

`@subsection Trading Security for Interoperability`

If you connect to a server and use GnuTLS' functions to verify the certificate chain, and get a `@ref{GNUTLS_CERT_INSECURE_ALGORITHM}` validation error (`@pxref{Verifying X.509 certificate paths}`), it means that somewhere in the certificate chain there is a certificate signed using `@code{RSA-MD2}` or `@code{RSA-MD5}`. These two digital signature algorithms are considered broken, so GnuTLS fail when attempting to verify the certificate. In some situations, it may be useful to be able to verify the certificate chain anyway, assuming an attacker did not utilize the fact that these signatures algorithms are broken. This section will give help on how to achieve that.

First, it is important to know that you do not have to enable any of the flags discussed here to be able to use trusted root CA certificates signed using `@code{RSA-MD2}` or `@code{RSA-MD5}`. The only attack today is that it is possible to generate certificates with colliding signatures (collision resistance); you cannot generate a certificate that has the same signature as an already existing signature (2nd preimage resistance).

If you are using `@ref{gnutls_certificate_verify_peers2}` to verify the certificate chain, you can call

`@ref{gnutls_certificate_set_verify_flags}` with the `@code{GNUTLS_VERIFY_ALLOW_SIGN_RSA_MD2}` or `@code{GNUTLS_VERIFY_ALLOW_SIGN_RSA_MD5}` flag, as in:

`@example`

```
gnutls_certificate_set_verify_flags(x509cred,  
                                   GNUTLS_VERIFY_ALLOW_SIGN_RSA_MD5);
```

@end example

This will tell the verifier algorithm to enable @code{RSA-MD5} when verifying the certificates.

If you are using @ref{gnutls_x509_cert_verify} or @ref{gnutls_x509_cert_list_verify}, you can pass the @code{GNUTLS_VERIFY_ALLOW_SIGN_RSA_MD5} parameter directly in the @code{flags} parameter.

If you are using these flags, it may also be a good idea to warn the user when verification failure occur for this reason. The simplest is to not use the flags by default, and only fall back to using them after warning the user. If you wish to inspect the certificate chain yourself, you can use @ref{gnutls_certificate_get_peers} to extract the raw server's certificate chain, then use @ref{gnutls_x509_cert_import} to parse each of the certificates, and then use @ref{gnutls_x509_cert_get_signature_algorithm} to find out the signing algorithm used for each certificate. If any of the intermediary certificates are using @code{GNUTLS_SIGN_RSA_MD2} or @code{GNUTLS_SIGN_RSA_MD5}, you could present a warning.

@node How to use TLS in application protocols

@chapter How To Use @acronym{TLS} in Application Protocols

This chapter is intended to provide some hints on how to use the @acronym{TLS} over simple custom made application protocols. The discussion below mainly refers to the @emph{TCP/IP} transport layer but may be extended to other ones too.

@menu

* Separate ports::

* Upward negotiation::

@end menu

@node Separate ports

@section Separate Ports

Traditionally @acronym{SSL} was used in application protocols by assigning a new port number for the secure services. That way two separate ports were assigned, one for the non secure sessions, and one for the secured ones. This has the benefit that if a user requests a secure session then the client will try to connect to the secure port and fail otherwise. The only possible attack with this method is a denial of service one. The most famous example of this method is the famous ``HTTP over TLS" or @acronym{HTTPS} protocol @xcite{RFC2818}.

Despite its wide use, this method is not as good as it seems. This approach starts the `@acronym{TLS}` Handshake procedure just after the client connects on the ---so called--- secure port. That way the `@acronym{TLS}` protocol does not know anything about the client, and popular methods like the host advertising in HTTP do not work^{@footnote{See also the Server Name Indication extension on @ref{serverind}.}}. There is no way for the client to say "I connected to YYY server" before the Handshake starts, so the server cannot possibly know which certificate to use.

Other than that it requires two separate ports to run a single service, which is unnecessary complication. Due to the fact that there is a limitation on the available privileged ports, this approach was soon obsoleted.

`@node` Upward negotiation
`@section` Upward Negotiation

Other application protocols^{@footnote{See LDAP, IMAP etc.}} use a different approach to enable the secure layer. They use something called the "STARTTLS" method. This method is quite tricky but it is more flexible. The idea is to extend the application protocol to have a "STARTTLS" request, whose purpose it to start the TLS protocols just after the client requests it. This is a really neat idea and does not require an extra port.

This method is used by almost all modern protocols and there is even the `@xcite{RFC2817}` paper which proposes extensions to HTTP to support it.

The tricky part, in this method, is that the "STARTTLS" request is sent in the clear, thus is vulnerable to modifications. A typical attack is to modify the messages in a way that the client is fooled and thinks that the server does not have the "STARTTLS" capability. See a typical conversation of a hypothetical protocol:

`@quotation`
(client connects to the server)

CLIENT: HELLO I'M MR. XXX

SERVER: NICE TO MEET YOU XXX

CLIENT: PLEASE START TLS

SERVER: OK

*** TLS STARTS

CLIENT: HERE ARE SOME CONFIDENTIAL DATA
@end quotation

And see an example of a conversation where someone is acting
in between:

@quotation
(client connects to the server)

CLIENT: HELLO I'M MR. XXX

SERVER: NICE TO MEET YOU XXX

CLIENT: PLEASE START TLS

(here someone inserts this message)

SERVER: SORRY I DON'T HAVE THIS CAPABILITY

CLIENT: HERE ARE SOME CONFIDENTIAL DATA
@end quotation

As you can see above the client was fooled, and was dummy enough to
send the confidential data in the clear.

How to avoid the above attack? As you may have already thought this
one is easy to avoid. The client has to ask the user before it
connects whether the user requests @acronym{TLS} or not. If the user
answered that he certainly wants the secure layer the last
conversation should be:

@quotation
(client connects to the server)

CLIENT: HELLO I'M MR. XXX

SERVER: NICE TO MEET YOU XXX

CLIENT: PLEASE START TLS

(here someone inserts this message)

SERVER: SORRY I DON'T HAVE THIS CAPABILITY

CLIENT: BYE

(the client notifies the user that the secure connection was not possible)

@end quotation

This method, if implemented properly, is far better than the traditional method, and the security properties remain the same, since only denial of service is possible. The benefit is that the server may request additional data before the @acronym{TLS} Handshake protocol starts, in order to send the correct certificate, use the correct password file@footnote{in @acronym{SRP} authentication}, or anything else!

@node How to use GnuTLS in applications

@chapter How To Use @acronym{GnuTLS} in Applications

@end menu

@node Preparation

@section Preparation

To use @acronym{GnuTLS}, you have to perform some changes to your sources and your build system. The necessary changes are explained in the following subsections.

@menu

* Headers::

* Initialization::

* Version check::

* Debugging::

* Building the source::

@end menu

@node Headers

@subsection Headers

All the data types and functions of the @acronym{GnuTLS} library are defined in the header file @file{gnutls/gnutls.h}. This must be included in all programs that make use of the @acronym{GnuTLS}

library.

The extra functionality of the @acronym{GnuTLS-extra} library is available by including the header file @file{gnutls/extra.h} in your programs.

@node Initialization

@subsection Initialization

GnuTLS must be initialized before it can be used. The library is initialized by calling @ref{gnutls_global_init}. The resources allocated by the initialization process can be released if the application no longer has a need to call GnuTLS functions, this is done by calling @ref{gnutls_global_deinit}.

The extra functionality of the @acronym{GnuTLS-extra} library is available after calling @ref{gnutls_global_init_extra}.

In order to take advantage of the internationalisation features in GnuTLS, such as translated error messages, the application must set the current locale using @code{setlocale} before initializing GnuTLS.

@node Version check

@subsection Version Check

It is often desirable to check that the version of `gnutls' used is indeed one which fits all requirements. Even with binary compatibility new features may have been introduced but due to problem with the dynamic linker an old version is actually used. So you may want to check that the version is okay right after program startup. See the function @ref{gnutls_check_version}.

@node Debugging

@subsection Debugging

In many cases things may not go as expected and further information, to assist debugging, from @acronym{GnuTLS} is desired. Those are the case where the @ref{gnutls_global_set_log_level} and @ref{gnutls_global_set_log_function} are to be used. Those will print verbose information on the @acronym{GnuTLS} functions internal flow.

@node Building the source

@subsection Building the Source

If you want to compile a source file including the @file{gnutls/gnutls.h} header file, you must make sure that the compiler can find it in the directory hierarchy. This is accomplished by adding the path to the directory in which the header file is

located to the compilers include file search path (via the `@option{-I} option`).

However, the path to the include file is determined at the time the source is configured. To solve this problem, the library uses the external package `@command{pkg-config}` that knows the path to the include file and other configuration options. The options that need to be added to the compiler invocation at compile time are output by the `@option{--cflags}` option to `@command{pkg-config libgnutls}`. The following example shows how it can be used at the command line:

```
@example
gcc -c foo.c `pkg-config libgnutls --cflags`
@end example
```

Adding the output of `@samp{pkg-config libgnutls --cflags}` to the compilers command line will ensure that the compiler can find the `@file{gnutls/gnutls.h}` header file.

A similar problem occurs when linking the program with the library. Again, the compiler has to find the library files. For this to work, the path to the library files has to be added to the library search path (via the `@option{-L}` option). For this, the option `@option{--libs}` to `@command{pkg-config libgnutls}` can be used. For convenience, this option also outputs all other options that are required to link the program with the library (for instance, the `@samp{-ltasn1}` option). The example shows how to link `@file{foo.o}` with the library to a program `@command{foo}`.

```
@example
gcc -o foo foo.o `pkg-config libgnutls --libs`
@end example
```

Of course you can also combine both examples to a single command by specifying both options to `@command{pkg-config}`:

```
@example
gcc -o foo foo.c `pkg-config libgnutls --cflags --libs`
@end example
```

```
@node Multi-threaded applications
@section Multi-Threaded Applications
```

Although the `@acronym{GnuTLS}` library is thread safe by design, some parts of Libgcrypt, such as the random generator, are not. Applications have to register callback functions to ensure proper locking in the sensitive parts of `@emph{libgcrypt}`.

There are helper macros to help you properly initialize the libraries.
Examples are shown below.

@itemize

@item POSIX threads

@example

```
#include <gnutls.h>
#include <gcrypt.h>
#include <errno.h>
#include <pthread.h>
GCRY_THREAD_OPTION_PTHREAD_IMPL;
```

```
int main()
```

```
@{
```

```
/* The order matters.
```

```
*/
```

```
gcry_control (GCRYCTL_SET_THREAD_CBS, &gcry_threads_pthread);
```

```
gnutls_global_init();
```

```
@}
```

@end example

@item GNU PTH threads

@example

```
#include <gnutls.h>
#include <gcrypt.h>
#include <errno.h>
#include <pth.h>
GCRY_THREAD_OPTION_PTH_IMPL;
```

```
int main()
```

```
@{
```

```
gcry_control (GCRYCTL_SET_THREAD_CBS, &gcry_threads_pth);
```

```
gnutls_global_init();
```

```
@}
```

@end example

@item Other thread packages

@example

```
/* The gcry_thread_cbs structure must have been
```

```
* initialized.
```

```
*/
```

```
static struct gcry_thread_cbs gcry_threads_other = @{ ... @};
```

```
int main()
```

```
@{
```

```
gcry_control (GCRYCTL_SET_THREAD_CBS, &gcry_threads_other);
```

```
@}
```

@end example

@end itemize

@node Client examples

@section Client Examples

This section contains examples of @acronym{TLS} and @acronym{SSL} clients, using @acronym{GnuTLS}. Note that these examples contain little or no error checking. Some of the examples require functions implemented by another example.

@menu

* Simple client example with anonymous authentication::

* Simple client example with X.509 certificate support::

* Obtaining session information::

@end menu

@node Simple client example with anonymous authentication

@subsection Simple Client Example with Anonymous Authentication

The simplest client using TLS is the one that doesn't do any authentication. This means no external certificates or passwords are needed to set up the connection. As could be expected, the connection is vulnerable to man-in-the-middle (active or redirection) attacks. However, the data is integrity and privacy protected.

@verbatiminclude examples/ex-client1.c

@node Simple client example with X.509 certificate support

@subsection Simple Client Example with @acronym{X.509} Certificate Support

Let's assume now that we want to create a TCP client which communicates with servers that use @acronym{X.509} or @acronym{OpenPGP} certificate authentication. The following client is a very simple @acronym{TLS} client, it does not support session resuming, not even certificate verification. The TCP functions defined in this example are used in most of the other examples below, without redefining them.

@verbatiminclude examples/ex-client2.c

@node Obtaining session information
@subsection Obtaining Session Information

Most of the times it is desirable to know the security properties of the current established session. This includes the underlying ciphers and the protocols involved. That is the purpose of the following function. Note that this function will print meaningful values only if called after a successful @ref{gnutls_handshake}.

@verbatiminclude examples/ex-session-info.c

@node Verifying peer's certificate
@subsection Verifying Peer's Certificate
@anchor{ex:verify}

A @acronym{TLS} session is not secure just after the handshake procedure has finished. It must be considered secure, only after the peer's certificate and identity have been verified. That is, you have to verify the signature in peer's certificate, the hostname in the certificate, and expiration dates. Just after this step you should treat the connection as being a secure one.

@verbatiminclude examples/ex-rfc2818.c

An other example is listed below which provides a more detailed verification output.

@verbatiminclude examples/ex-verify.c

@node Using a callback to select the certificate to use
@subsection Using a Callback to Select the Certificate to Use

There are cases where a client holds several certificate and key pairs, and may not want to load all of them in the credentials structure. The following example demonstrates the use of the certificate selection callback.

@verbatiminclude examples/ex-cert-select.c

@node Client with Resume capability example
@subsection Client with Resume Capability Example
@anchor{ex:resume-client}

This is a modification of the simple client example. Here we demonstrate the use of session resumption. The client tries to connect once using @acronym{TLS}, close the connection and then try to establish a new connection using the previously negotiated data.

@verbatiminclude examples/ex-client-resume.c

@node Simple client example with SRP authentication

@subsection Simple Client Example with @acronym{SRP} Authentication

The following client is a very simple @acronym{SRP} @acronym{TLS} client which connects to a server and authenticates using a @emph{username} and a @emph{password}. The server may authenticate itself using a certificate, and in that case it has to be verified.

@verbatiminclude examples/ex-client-srp.c

@node Simple client example with TLS/IA support

@subsection Simple Client Example with @acronym{TLS/IA} Support

The following client is a simple client which uses the @acronym{TLS/IA} extension to authenticate with the server.

@verbatiminclude examples/ex-client-tlsia.c

@node Simple client example in C++

@subsection Simple Client Example using the C++ API

The following client is a simple example of a client client utilizing the GnuTLS C++ API.

@verbatiminclude examples/ex-cxx.cpp

@node Helper function for TCP connections

@subsection Helper Function for TCP Connections

This helper function abstracts away TCP connection handling from the other examples. It is required to build some examples.

@verbatiminclude examples/tcp.c

@node Server examples

@section Server Examples

This section contains examples of @acronym{TLS} and @acronym{SSL} servers, using @acronym{GnuTLS}.

@subsection @acronym{PKCS} #12 Structure Generation
@anchor{ex:pkcs12}

The following example is about generating a @acronym{PKCS} #12 structure.

@verbatiminclude examples/ex-pkcs12.c

@node Compatibility with the OpenSSL library

@section Compatibility with the OpenSSL Library

@cindex OpenSSL

To ease @acronym{GnuTLS}' integration with existing applications, a compatibility layer with the widely used OpenSSL library is included in the @code{gnutls-openssl} library. This compatibility layer is not complete and it is not intended to completely reimplement the OpenSSL API with @acronym{GnuTLS}. It only provides source-level compatibility. There is currently no attempt to make it binary-compatible with OpenSSL.

The prototypes for the compatibility functions are in the @file{gnutls/openssl.h} header file.

Current limitations imposed by the compatibility layer include:

@itemize

@item Error handling is not thread safe.

@end itemize

@node Opaque PRF Input TLS Extension

@section Opaque PRF Input TLS Extension

@cindex Opaque PRF Input

GnuTLS supports the Opaque PRF Input TLS extension (@code{draft-rescorla-tls-opaque-prf-input-00.txt}). The API consists of one API for use in the client, @ref{gnutls_oprfi_enable_client}, and one API for use in the server, @ref{gnutls_oprfi_enable_server}. You must invoke both functions before calling @ref{gnutls_handshake}. The server utilizes a callback function into the application. The callback can look at the random string provided by the client, and also set the server string. The string lengths must be equal according to the protocol.

@node Keying Material Exporters

@section Keying Material Exporters

@cindex Keying Material Exporters

@cindex Exporting Keying Material

The TLS PRF can be used by other protocols to derive data. The API to use is @ref{gnutls_prf}. The function needs to be provided with the label in the parameter @code{label}, and the extra data to mix in the @code{extra} parameter. Depending on whether you want to mix in the client or server random data first, you can set the @code{server_random_first} parameter.

For example, after establishing a TLS session using `@ref{gnutls_handshake}`, you can invoke the TLS PRF with this call:

```
@smallexample
#define MYLABEL "EXPORTER-FOO"
#define MYCONTEXT "some context data"
char out[32];
rc = gnutls_prf (session, strlen (MYLABEL), MYLABEL, 0,
                strlen (MYCONTEXT), MYCONTEXT, 32, out);
@end smallexample
```

If you don't want to mix in the client/server random, there is a more low-level TLS PRF interface called `@ref{gnutls_prf_raw}`.

```
@node Included programs
@chapter Included Programs
```

Included with `@acronym{GnuTLS}` are also a few command line tools that let you use the library for common tasks without writing an application. The applications are discussed in this chapter.

```

@node Invoking certtool
@section Invoking certtool
@cindex certtool
```

This is a program to generate `@acronym{X.509}` certificates, certificate requests, CRLs and private keys.

```
@verbatim
Certtool help
Usage: certtool [options]
  -s, --generate-self-signed
                        Generate a self-signed certificate.
  -c, --generate-certificate
                        Generate a signed certificate.
  --generate-proxy      Generate a proxy certificate.
  --generate-crl        Generate a CRL.
  -u, --update-certificate
                        Update a signed certificate.
```

-p, --generate-privkey Generate a private key.
 -q, --generate-request Generate a PKCS #10 certificate request.
 -e, --verify-chain Verify a PEM encoded certificate chain.
 The last certificate in the chain must be a self signed one.
 --verify-crl Verify a CRL.
 --generate-dh-params Generate PKCS #3 encoded Diffie-Hellman parameters.
 --get-dh-params Get the included PKCS #3 encoded Diffie Hellman parameters.
 --load-privkey FILE Private key file to use.
 --load-request FILE Certificate request file to use.
 --load-certificate FILE Certificate file to use.
 --load-ca-privkey FILE Certificate authority's private key file to use.
 --load-ca-certificate FILE Certificate authority's certificate file to use.
 --password PASSWORD Password to use.
 -i, --certificate-info Print information on a certificate.
 -l, --crl-info Print information on a CRL.
 --p12-info Print information on a PKCS #12 structure.
 --p7-info Print information on a PKCS #7 structure.
 --smime-to-p7 Convert S/MIME to PKCS #7 structure.
 -k, --key-info Print information on a private key.
 --fix-key Regenerate the parameters in a private key.
 --to-p12 Generate a PKCS #12 structure.
 -8, --pkcs8 Use PKCS #8 format for private keys.
 --dsa Use DSA keys.
 --hash STR Hash algorithm to use for signing (MD5,SHA1,RMD160).
 --export-ciphers Use weak encryption algorithms.
 --inder Use DER format for input certificates and private keys.
 --outder Use DER format for output certificates and private keys.
 --bits BITS specify the number of bits for key generation.
 --outfile FILE Output file.
 --infile FILE Input file.
 --template FILE Template file to use for non interactive operation.
 -d, --debug LEVEL specify the debug level. Default is 1.

-h, --help shows this help text
-v, --version shows the program's version
@end verbatim

The program can be used interactively or non interactively by specifying the @code{--template} command line option. See below for an example of a template file.

How to use certtool interactively:

@itemize

@item

To generate parameters for Diffie-Hellman key exchange, use the command:

@example

```
$ certtool --generate-dh-params --outfile dh.pem
```

@end example

@item

To generate parameters for the RSA-EXPORT key exchange, use the command:

@example

```
$ certtool --generate-privkey --bits 512 --outfile rsa.pem
```

@end example

@end itemize

@itemize

@item

To create a self signed certificate, use the command:

@example

```
$ certtool --generate-privkey --outfile ca-key.pem
```

```
$ certtool --generate-self-signed --load-privkey ca-key.pem \  
--outfile ca-cert.pem
```

@end example

Note that a self-signed certificate usually belongs to a certificate authority, that signs other certificates.

@item

To create a private key (RSA by default), run:

@example

```
$ certtool --generate-privkey --outfile key.pem
```

@end example

To create a DSA private key, run:

@example

```
$ certtool --dsa --generate-privkey --outfile key-dsa.pem
@end example
```

@item

To generate a certificate using the private key, use the command:

```
@example
$ certtool --generate-certificate --load-privkey key.pem \
  --outfile cert.pem --load-ca-certificate ca-cert.pem \
  --load-ca-privkey ca-key.pem
@end example
```

@item

To create a certificate request (needed when the certificate is issued by another party), run:

```
@example
$ certtool --generate-request --load-privkey key.pem \
  --outfile request.pem
@end example
```

@item

To generate a certificate using the previous request, use the command:

```
@example
$ certtool --generate-certificate --load-request request.pem \
  --outfile cert.pem \
  --load-ca-certificate ca-cert.pem --load-ca-privkey ca-key.pem
@end example
```

@item

To view the certificate information, use:

```
@example
$ certtool --certificate-info --infile cert.pem
@end example
```

@item

To generate a @acronym{PKCS} #12 structure using the previous key and certificate, use the command:

```
@example
$ certtool --load-certificate cert.pem --load-privkey key.pem \
  --to-p12 --outder --outfile key.p12
@end example
```

@item

Proxy certificate can be used to delegate your credential to a

temporary, typically short-lived, certificate. To create one from the previously created certificate, first create a temporary key and then generate a proxy certificate for it, using the commands:

```
@example
$ certtool --generate-privkey > proxy-key.pem
$ certtool --generate-proxy --load-ca-privkey key.pem \
--load-privkey proxy-key.pem --load-certificate cert.pem \
--outfile proxy-cert.pem
@end example
```

@item

To create an empty Certificate Revocation List (CRL) do:

```
@example
$ certtool --generate-crl --load-ca-privkey x509-ca-key.pem --load-ca-certificate x509-ca.pem
@end example
```

To create a CRL that contains some revoked certificates, place the certificates in a file and use `--load-certificate` as follows:

```
@example
$ certtool --generate-crl --load-ca-privkey x509-ca-key.pem --load-ca-certificate x509-ca.pem --load-certificate
revoked-certs.pem
@end example
```

@item

To verify a Certificate Revocation List (CRL) do:

```
@example
$ certtool --verify-crl --load-ca-certificate x509-ca.pem < crl.pem
@end example
```

@end itemize

Certtool's template file format:

@itemize

@item

Firstly create a file named 'cert.cfg' that contains the information about the certificate. An example file is listed below.

@item

Then execute:

```
@example
$ certtool --generate-certificate cert.pem --load-privkey key.pem \
```

@node Invoking gnutls-cli

@section Invoking gnutls-cli

@cindex gnutls-cli

Simple client program to set up a TLS connection to some other computer. It sets up a TLS connection and forwards data from the standard input to the secured socket and vice versa.

@verbatim

GNU TLS test client

Usage: gnutls-cli [options] hostname

-d, --debug integer Enable debugging

-r, --resume Connect, establish a session. Connect again and resume this session.

-s, --starttls Connect, establish a plain session and start TLS when EOF or a SIGALRM is received.

--crlf Send CR LF instead of LF.

--x509fmtder Use DER format for certificates to read from.

-f, --fingerprint Send the openpgp fingerprint, instead of the key.

--disable-extensions Disable all the TLS extensions.

--print-cert Print the certificate in PEM format.

--recordsize integer The maximum record size to advertize.

-V, --verbose More verbose output.

--ciphers cipher1 cipher2...
Ciphers to enable.

--protocols protocol1 protocol2...
Protocols to enable.

--comp comp1 comp2... Compression methods to enable.

--macs mac1 mac2... MACs to enable.

--kx kx1 kx2... Key exchange methods to enable.

--ctypes certType1 certType2...
Certificate types to enable.

--priority PRIORITY STRING
Priorities string.

--x509cafile FILE Certificate file to use.

--x509crlfile FILE CRL file to use.

--pgpkeyfile FILE PGP Key file to use.

--pgpkeyring FILE PGP Key ring file to use.

--pgpcertfile FILE PGP Public Key (certificate) file to use.

```

--pgpsubkey HEX|auto    PGP subkey to use.
--x509keyfile FILE      X.509 key file to use.
--x509certfile FILE     X.509 Certificate file to use.
--srpusername NAME      SRP username to use.
--srppasswd PASSWD      SRP password to use.
--pskusername NAME      PSK username to use.
--pskkey KEY            PSK key (in hex) to use.
--opaque-prf-input DATA
                        Use Opaque PRF Input DATA.
-p, --port PORT         The port to connect to.
--insecure              Don't abort program if server
                        certificate can't be validated.
-l, --list              Print a list of the supported
                        algorithms and modes.
-h, --help              prints this help
-v, --version           prints the program's version number
@end verbatim

```

To connect to a server using PSK authentication, you may use something like:

```

@smallexample
$ gnutls-cli -p 5556 test.gnutls.org --pskusername jas --pskkey 9e32cf7786321a828ef7668f09fb35db --priority
NORMAL:+PSK:-RSA:-DHE-RSA -d 4711
@end smallexample

```

```

@menu
* Example client PSK connection::
@end menu

```

```

@node Example client PSK connection
@subsection Example client PSK connection
@cindex PSK client

```

If your server only supports the PSK ciphersuite, connecting to it should be as simple as connecting to the server:

```

@smallexample
$ ./gnutls-cli -p 5556 localhost
Resolving 'localhost'...
Connecting to '127.0.0.1:5556'...
- PSK client callback. PSK hint 'psk_identity_hint'
Enter PSK identity: psk_identity
Enter password:
- PSK authentication. PSK hint 'psk_identity_hint'
- Version: TLS1.1
- Key Exchange: PSK
- Cipher: AES-128-CBC

```

- MAC: SHA1
- Compression: NULL
- Handshake was completed

- Simple Client Mode:
@end smallexample

If the server supports several cipher suites, you may need to force it to chose PSK by using a cipher priority parameter such as
@code{--priority NORMAL:+PSK:-RSA:-DHE-RSA:-DHE-PSK}.

@cindex Netconf

Instead of using the Netconf-way to derive the PSK key from a password, you can also give the PSK username and key directly on the command line:

@smallexample

```
$/gnutls-cli -p 5556 localhost --pskusername psk_identity --pskey  
88f3824b3e5659f52d00e959bacab954b6540344
```

Resolving 'localhost'...

Connecting to '127.0.0.1:5556'...

- PSK authentication. PSK hint 'psk_identity_hint'

- Version: TLS1.1

- Key Exchange: PSK

- Cipher: AES-128-CBC

- MAC: SHA1

- Compression: NULL

- Handshake was completed

- Simple Client Mode:
@end smallexample

By keeping the @code{--pskusername} parameter and removing the @code{--pskey} parameter, it will query only for the password during the handshake.

@node Invoking gnutls-cli-debug

@section Invoking gnutls-cli-debug

@cindex gnutls-cli-debug

This program was created to assist in debugging @acronym{GnuTLS}, but it might be useful to extract a @acronym{TLS} server's capabilities.

It's purpose is to connect onto a @acronym{TLS} server, perform some tests and print the server's capabilities. If called with the '-v' parameter a more checks will be performed. An example output is:

@smallexample

```
crystal:cvs/gnutls/src$ ./gnutls-cli-debug localhost -p 5556
```

Resolving 'localhost'...

 -v, --version prints the program's version number
 @end verbatim

@subsection Setting Up a Test HTTPS Server

@cindex HTTPS server

```
@cindex debug server
```

Running your own TLS server based on GnuTLS can be useful when debugging clients and/or GnuTLS itself. This section describes how to use `gnutls-serv` as a simple HTTPS server.

The most basic server can be started as:

```
@example
gnutls-serv --http
@end example
```

It will only support anonymous ciphersuites, which many TLS clients refuse to use.

The next step is to add support for X.509. First we generate a CA:

```
@example
certtool --generate-privkey > x509-ca-key.pem
echo 'cn = GnuTLS test CA' > ca.tmpl
echo 'ca' >> ca.tmpl
echo 'cert_signing_key' >> ca.tmpl
certtool --generate-self-signed --load-privkey x509-ca-key.pem \
--template ca.tmpl --outfile x509-ca.pem
...
@end example
```

Then generate a server certificate. Remember to change the `dns_name` value to the name of your server host, or skip that command to avoid the field.

```
@example
certtool --generate-privkey > x509-server-key.pem
echo 'organization = GnuTLS test server' > server.tmpl
echo 'cn = test.gnutls.org' >> server.tmpl
echo 'tls_www_server' >> server.tmpl
echo 'encryption_key' >> server.tmpl
echo 'signing_key' >> server.tmpl
echo 'dns_name = test.gnutls.org' >> server.tmpl
certtool --generate-certificate --load-privkey x509-server-key.pem \
--load-ca-certificate x509-ca.pem --load-ca-privkey x509-ca-key.pem \
--template server.tmpl --outfile x509-server.pem
...
@end example
```

For use in the client, you may want to generate a client certificate as well.

```
@example
certtool --generate-privkey > x509-client-key.pem
echo 'cn = GnuTLS test client' > client.tmpl
echo 'tls_www_client' >> client.tmpl
echo 'encryption_key' >> client.tmpl
echo 'signing_key' >> client.tmpl
certtool --generate-certificate --load-privkey x509-client-key.pem \
--load-ca-certificate x509-ca.pem --load-ca-privkey x509-ca-key.pem \
--template client.tmpl --outfile x509-client.pem
...
@end example
```

To be able to import the client key/certificate into some applications, you will need to convert them into a PKCS#12 structure. This also encrypts the security sensitive key with a password.

```
@example
certtool --to-p12 --load-privkey x509-client-key.pem --load-certificate x509-client.pem --outder --outfile x509-client.p12
@end example
```

For icing, we'll create a proxy certificate for the client too.

```
@example
certtool --generate-privkey > x509-proxy-key.pem
echo 'cn = GnuTLS test client proxy' > proxy.tmpl
certtool --generate-proxy --load-privkey x509-proxy-key.pem \
--load-ca-certificate x509-client.pem --load-ca-privkey x509-client-key.pem \
--load-certificate x509-client.pem --template proxy.tmpl \
--outfile x509-proxy.pem
...
@end example
```

Then start the server again:

```
@example
gnutls-serv --http \
--x509cafile x509-ca.pem \
--x509keyfile x509-server-key.pem \
--x509certfile x509-server.pem
@end example
```

Try connecting to the server using your web browser. Note that the server listens to port 5556 by default.

While you are at it, to allow connections using DSA, you can also create a DSA key and certificate for the server. These credentials will be used in the final example below.

```
@example
certtool --generate-privkey --dsa > x509-server-key-dsa.pem
certtool --generate-certificate --load-privkey x509-server-key-dsa.pem \
--load-ca-certificate x509-ca.pem --load-ca-privkey x509-ca-key.pem \
--template server.tmpl --outfile x509-server-dsa.pem
...
@end example
```

The next step is to create OpenPGP credentials for the server.

```
@example
gpg --gen-key
...enter whatever details you want, use 'test.gnutls.org' as name...
@end example
```

Make a note of the OpenPGP key identifier of the newly generated key, here it was `{5D1D14D8}`. You will need to export the key for GnuTLS to be able to use it.

```
@example
gpg -a --export 5D1D14D8 > openpgp-server.txt
gpg --export 5D1D14D8 > openpgp-server.bin
gpg --export-secret-keys 5D1D14D8 > openpgp-server-key.bin
gpg -a --export-secret-keys 5D1D14D8 > openpgp-server-key.txt
@end example
```

Let's start the server with support for OpenPGP credentials:

```
@example
gnutls-serv --http \
--pgpkeyfile openpgp-server-key.txt \
--pgpcertfile openpgp-server.txt
@end example
```

The next step is to add support for SRP authentication.

```
@example
srptool --create-conf srp-tpasswd.conf
srptool --passwd-conf srp-tpasswd.conf --username jas --passwd srp-passwd.txt
Enter password: [TYPE "foo"]
@end example
```

Start the server with SRP support:

```
@example
gnutls-serv --http \
--srpasswdconf srp-tpasswd.conf \
```

```
--srppasswd srp-passwd.txt
@end example
```

Let's also add support for PSK.

```
@example
$ psktool --passwd psk-passwd.txt
@end example
```

Start the server with PSK support:

```
@example
gnutls-serv --http \
  --pskpasswd psk-passwd.txt
@end example
```

Finally, we start the server with all the earlier parameters and you get this command:

```
@example
gnutls-serv --http \
  --x509cafile x509-ca.pem \
  --x509keyfile x509-server-key.pem \
  --x509certfile x509-server.pem \
  --x509dsafile x509-server-key-dsa.pem \
  --x509dsacertfile x509-server-dsa.pem \
  --pgpkeyfile openpgp-server-key.txt \
  --pgpcertfile openpgp-server.txt \
  --srppasswdconf srp-tpasswd.conf \
  --srppasswd srp-passwd.txt \
  --pskpasswd psk-passwd.txt
@end example
```

```
@menu
* Example server PSK connection::
@end menu
```

```
@node Example server PSK connection
@subsection Example server PSK connection
@cindex PSK server
```

To set up a PSK server with `gnutls-serv` you need to create PSK password file (`psktool`). In the example below, I type `password` at the prompt.

```
@smallexample
$ ./psktool -u psk_identity -p psks.txt -n psk_identity_hint
Enter password:
```

```
Key stored to psks.txt
$ cat psks.txt
psk_identity:88f3824b3e5659f52d00e959bacab954b6540344
$
@end smallexample
```

After this, start the server pointing to the password file. We disable DHE-PSK.

```
@smallexample
$ ./gnutls-serv --pskpasswd psks.txt --pskhint psk_identity_hint --priority NORMAL:-DHE-PSK
Set static Diffie-Hellman parameters, consider --dhparams.
Echo Server ready. Listening to port '5556'.
@end smallexample
```

You can now connect to the server using a PSK client (@pxref{Example client PSK connection}).

```
@node Invoking psktool
@section Invoking psktool
@cindex psktool
```

This is a program to manage @acronym{PSK} username and keys.

```
@verbatim
PSKtool help
Usage : psktool [options]
  -u, --username username
           specify username.
  -p, --passwd FILE    specify a password file.
  -n, --netconf-hint HINT
           derive key from Netconf password, using
           HINT as the psk_identity_hint.
  -s, --keysize SIZE  specify the key size in bytes.
  -v, --version        prints the program's version number
  -h, --help          shows this help text
@end verbatim
```

Normally the file will generate random keys for the indicate username. You may also derive PSK keys from passwords, using the algorithm specified in @file{draft-ietf-netconf-tls-02.txt}. The algorithm needs a PSK identity hint, which you specify using @code{--netconf-hint}. To derive a PSK key from a password with an empty PSK identity hint, using @code{--netconf-hint ""}.

```
@node Invoking srptool
@section Invoking srptool
@anchor{srptool}
```

@cindex srptool

The @file{srptool} is a very simple program that emulates the programs in the @emph{Stanford SRP libraries}, see @url{http://srp.stanford.edu/}. It is intended for use in places where you don't expect @acronym{SRP} authentication to be the used for system users.

Traditionally @emph{libsrp} used two files. One called @code{tpasswd} which holds usernames and verifiers, and @code{tpasswd.conf} which holds generators and primes.

How to use srptool:

@itemize

@item

To create tpasswd.conf which holds the g and n values for @acronym{SRP} protocol (generator and a large prime), run:

@example

```
$ srptool --create-conf /etc/tpasswd.conf
```

@end example

@item

This command will create /etc/tpasswd and will add user 'test' (you will also be prompted for a password). Verifiers are stored by default in the way libsrp expects.

@example

```
$ srptool --passwd /etc/tpasswd \  
--passwd-conf /etc/tpasswd.conf -u test
```

@end example

@item

This command will check against a password. If the password matches the one in /etc/tpasswd you will get an ok.

@example

```
$ srptool --passwd /etc/tpasswd \  
--passwd-conf /etc/tpasswd.conf --verify -u test
```

@end example

@end itemize

@anchor{sec:x509api}
@cindex @acronym{X.509} Functions

The following functions are to be used for @acronym{X.509} certificate handling.
Their prototypes lie in @file{gnutls/x509.h}.

@include x509-api.texi

@node GnuTLS-extra functions
@section @acronym{GnuTLS-extra} Functions
@cindex @acronym{GnuTLS-extra} functions

These functions are only available in the GPLv3+ version of the
library called @code{gnutls-extra}. The prototypes for this library
lie in @file{gnutls/extra.h}.

@include gnutls-extra-api.texi

@node OpenPGP functions
@section @acronym{OpenPGP} Functions
@cindex @acronym{OpenPGP} functions
@anchor{sec:openpgpapi}

The following functions are to be used for @acronym{OpenPGP}
certificate handling. Their prototypes lie in
@file{gnutls/openpgp.h}.

@include pgp-api.texi

@node TLS Inner Application (TLS/IA) functions
@section @acronym{TLS} Inner Application (@acronym{TLS/IA}) Functions
@index @acronym{TLS} Inner Application (@acronym{TLS/IA}) functions
@index Inner Application (@acronym{TLS/IA}) functions

The following functions are used for @acronym{TLS} Inner Application (@acronym{TLS/IA}). Their prototypes lie in @file{gnutls/extra.h}. You need to link with @file{libgnutls-extra} to be able to use these functions (@pxref{GnuTLS-extra functions}).

The typical control flow in an TLS/IA client (that would not require an Application Phase for resumed sessions) would be similar to the following:

```
@example
int client_avp (gnutls_session_t *session, void *ptr,
               const char *last, size_t lastlen,
               char **new, size_t *newlen)
@{
...
@}
...
int main ()
@{
  gnutls_ia_client_credentials_t iacred;
  ...
  gnutls_init (&session, GNUTLS_CLIENT);
  ...
  /* Enable TLS/IA. */
  gnutls_ia_allocate_client_credentials(&iacred);
  gnutls_ia_set_client_avp_function(iacred, client_avp);
  gnutls_credentials_set (session, GNUTLS_CRD_IA, iacred);
  ...
  ret = gnutls_handshake (session);
  // Error handling...
  ...
  if (gnutls_ia_handshake_p (session))
    @{
      ret = gnutls_ia_handshake (session);
      // Error handling...
    ...
@end example
```

See below for detailed descriptions of all the functions used above.

The function @code{client_avp} would have to be implemented by your application. The function is responsible for handling the AVP data.

See `gnutls_ia_set_client_avp_function` below for more information on how that function should be implemented.

The control flow in a typical server is similar to the above, use `gnutls_ia_server_credentials_t` instead of `gnutls_ia_client_credentials_t`, and replace the call to the client functions with the corresponding server functions.

```
@include ia-api.texi
```

```
@node Error codes and descriptions
@section Error Codes and Descriptions
@anchor{Error Codes}
@cindex Error codes
```

The error codes used throughout the library are described below. The return code `GNUTLS_E_SUCCESS` indicate successful operation, and is guaranteed to have the value 0, so you can use it in logical expressions.

```
@include error_codes.texi
```

```
@node All the supported ciphersuites in GnuTLS
@chapter All the Supported Ciphersuites in @acronym{GnuTLS}
@anchor{ciphersuites}
@cindex Ciphersuites
```

```
@include algorithms.texi
```

Some additional information regarding some of the algorithms:

```
@table @code
```

```
@item RSA
```

RSA is public key cryptosystem designed by Ronald Rivest, Adi Shamir and Leonard Adleman. It can be used with any hash functions.

```
@item DSA
```

DSA is the USA's Digital Signature Standard. It uses only the SHA-1 hash algorithm.

```
@item MD2
```

MD2 is a cryptographic hash algorithm designed by Ron Rivest. It is optimized for 8-bit processors. Outputs 128 bits of data. There are no known weaknesses of this algorithm but since this algorithm is rarely used and not really studied it should not be used today.

```
@item MD5
```

MD5 is a cryptographic hash algorithm designed by Ron Rivest. Outputs

128 bits of data. It is considered to be broken.

@item SHA-1

SHA is a cryptographic hash algorithm designed by NSA. Outputs 160 bits of data. It is also considered to be broken, though no practical attacks have been found.

@item RMD160

RIPEDM is a cryptographic hash algorithm developed in the framework of the EU project RIPE. Outputs 160 bits of data.

@node Internal architecture of GnuTLS

@chapter Internal Architecture of GnuTLS

@cindex Internal architecture

This chapter is to give a brief description of the way @acronym{GnuTLS} works. The focus is to give an idea to potential developers and those who want to know what happens inside the black box.

@menu

- * The TLS Protocol::
- * TLS Handshake Protocol::
- * TLS Authentication Methods::
- * TLS Extension Handling::
- * Cryptographic Backend::

@end menu

@node The TLS Protocol

@section The TLS Protocol

The main needs for the TLS protocol to be used are shown in the image below.

@image{gnutls-client-server-use-case,9cm}

This is being accomplished by the following object diagram. Note that since @acronym{GnuTLS} is being developed in C object are just structures with attributes. The operations listed are functions that require the first parameter to be that object.

@image{gnutls-objects,15cm}

@node TLS Handshake Protocol

@section TLS Handshake Protocol

The @acronym{GnuTLS} handshake protocol is implemented as a state machine that waits for input or returns immediately when the non-blocking transport layer functions are used. The main idea is shown in the following figure.

@image{gnutls-handshake-state,9cm}

Also the way the input is processed varies per ciphersuite. Several implementations of the internal handlers are available and @ref{gnutls_handshake} only multiplexes the input to the appropriate handler. For example a @acronym{PSK} ciphersuite has a different implementation of the @code{process_client_key_exchange} than a certificate ciphersuite.

@image{gnutls-handshake-sequence,12cm}

@node TLS Authentication Methods

@section TLS Authentication Methods

In @acronym{GnuTLS} authentication methods can be implemented quite easily. Since the required changes to add a new authentication method affect only the handshake protocol, a simple interface is used. An authentication method needs only to implement the functions as seen in the figure below.

@image{gnutls-mod_auth_st,12cm}

The functions that need to be implemented are the ones responsible for interpreting the handshake protocol messages. It is common for such functions to read data from one or more @code{credentials_t} structures@footnote{such as the @code{gnutls_certificate_credentials_t} structures} and write data, such as certificates, usernames etc. to @code{auth_info_t} structures.

Simple examples of existing authentication methods can be seen in @code{auth_psk.c} for PSK ciphersuites and @code{auth_srp.c} for SRP ciphersuites. After implementing these functions the structure holding its pointers has to be registered in @code{gnutls_algorithms.c} in the @code{_gnutls_kx_algorithms} structure.

@node TLS Extension Handling

@section TLS Extension Handling

As with authentication methods, the TLS extensions handlers can be implemented using the following interface.

@image{gnutls-extensions_st,12cm}

Here there are two functions, one for receiving the extension data and one for sending. These functions have to check internally whether

they operate in client or server side.

A simple example of an extension handler can be seen in `ext_srp.c`. After implementing these functions, together with the extension number they handle, they have to be registered in `gnutls_extensions.c` in the `_gnutls_extensions` structure.

Adding a New TLS Extension

Adding support for a new TLS extension is done from time to time, and the process to do so is not difficult. Here are the steps you need to follow if you wish to do this yourself. For sake of discussion, let's consider adding support for the hypothetical TLS extension `foobar`.

Enumerate

Modify `configure.in` to add `--enable-foobar` or `--disable-foobar`.

Which to choose depends on whether you intend to make the extension be enabled by default. Look at existing checks (i.e., SRP, authz) for how to model the code. For example:

```
@example
AC_MSG_CHECKING([whether to disable foobar support])
AC_ARG_ENABLE(foobar,
  AS_HELP_STRING([--disable-foobar],
    [disable foobar support]),
  ac_enable_foobar=no)
if test x$ac_enable_foobar != xno; then
  AC_MSG_RESULT(no)
  AC_DEFINE(ENABLE_FOOBAR, 1, [enable foobar])
else
  ac_full=0
  AC_MSG_RESULT(yes)
fi
AM_CONDITIONAL(ENABLE_FOOBAR, test "$ac_enable_foobar" != "no")
@end example
```

Add IANA extension value to `extensions_t` in `gnutls_int.h`.

A good name for the value would be `GNUTLS_EXTENSION_FOOBAR`. Check with <http://www.iana.org/assignments/tls-extensiontype-values> for allocated values. For experiments, you could pick a number but remember that some consider it a bad idea to deploy such modified version since it will lead to interoperability problems in the future when the IANA allocates that number to someone else, or when the foobar protocol is allocated another number.

@item Add an entry to @code{ _gnutls_extensions } in @code{gnutls_extensions.c}.

A typical entry would be:

```
@example
#if ENABLE_FOOBAR
GNUTLS_EXTENSION_ENTRY (GNUTLS_EXTENSION_FOOBAR,
    _gnutls_foobar_recv_params,
    _gnutls_foobar_send_params),
#endif
@end example
```

The GNUTLS_EXTENSION_FOOBAR is the integer value you added to @code{gnutls_int.h} earlier. The two functions are new functions that you will need to implement, most likely you'll need to add an @code{#include "ext_foobar.h"} as well.

@item Add new files @code{ext_foobar.c} and @code{ext_foobar.h} that implements the extension.

The functions you are responsible to add are those mentioned in the previous step. As a starter, you could add this:

```
@example
int
_gnutls_foobar_recv_params (gnutls_session_t session,
    const opaque * data,
    size_t data_size)
@{
    return 0;
@}

int
_gnutls_foobar_send_params (gnutls_session_t session,
    opaque * data,
    size_t _data_size)
@{
    return 0;
@}
@end example
```

The @code{ _gnutls_foobar_recv_params } function is responsible for parsing incoming extension data (both in the client and server).

The @code{ _gnutls_foobar_send_params } function is responsible for sending extension data (both in the client and server).

If you receive length fields that doesn't match, return

`GNUTLS_E_UNEXPECTED_PACKET_LENGTH`. If you receive invalid data, return `GNUTLS_E_RECEIVED_ILLEGAL_PARAMETER`. You can use other error codes too. Return 0 on success.

The function typically store some information in the `session` variable for later usage. If you need to add new fields there, check `tls_ext_st` in `gnutls_int.h` and compare with existing TLS extension specific variables.

Recall that both the client and server both send and receives parameters, and your code most likely will need to do different things depending on which mode it is in. It may be useful to make this distinction explicit in the code. Thus, for example, a better template than above would be:

```
@example
int
_gnutls_foobar_rcv_params (gnutls_session_t session,
                          const opaque * data,
                          size_t data_size)
@{
  if (session->security_parameters.entity == GNUTLS_CLIENT)
    return foobar_rcv_client (session, data, data_size);
  else
    return foobar_rcv_server (session, data, data_size);
@}

int
_gnutls_foobar_send_params (gnutls_session_t session,
                           opaque * data,
                           size_t data_size)
@{
  if (session->security_parameters.entity == GNUTLS_CLIENT)
    return foobar_send_client (session, data, data_size);
  else
    return foobar_send_server (session, data, data_size);
@}
@end example
```

The functions used would be declared as `static` functions, of the appropriate prototype, in the same file.

When adding the files, you'll need to add them to `Makefile.am` as well, for example:

```
@example
if ENABLE_FOOBAR
  OBJECTS += ext_foobar.c
```

```
HFILES += ext_foobar.h
```

```
endif
```

```
@end example
```

@item Add API functions to enable/disable the extension.

Normally the client will have one API to request use of the extension, and setting some extension specific data. The server will have one API to let the library know that it is willing to accept the extension, often this is implemented through a callback but it doesn't have to.

The APIs need to be added to `includes/gnutls/gnutls.h` or `includes/gnutls/extra.h` as appropriate. It is recommended that if you don't have a requirement to use the LGPLv2.1+ license for your extension, that you place your work under the GPLv3+ license and thus in the libgnutls-extra library.

You can implement the API function in the `ext_foobar.c` file, or if that file ends up becoming rather larger, add a `gnutls_foobar.c` file.

```
@end enumerate
```

```
@section Certificate Handling
```

What is provided by the certificate handling functions is summarized in the following diagram.

```
@image{gnutls-certificate-user-use-case,12cm}
```

```
@node Cryptographic Backend
```

```
@section Cryptographic Backend
```

Several new systems provide hardware assisted cryptographic algorithm implementations that offer implementations some orders of magnitude faster than the software. For this reason in current releases of GnuTLS it is possible to override parts of the crypto backend or the whole. It is possible to override them both at runtime and compile time, however here we will discuss the runtime possibility. The API available for this functionality is in `gnutls/crypto.h` header file.

```
@subsection Override specific algorithms
```

When an optimized implementation of a single algorithm is available, say a hardware assisted version of `AES-CBC` then the following functions can be used to register those algorithms.

```
@itemize
```

```
@item @ref{gnutls_crypto_single_cipher_register2}
```

To register a cipher algorithm.

@item @ref{gnutls_crypto_single_mac_register2}

To register a MAC algorithm.

@ref{gnutls_crypto_single_digest_register2}

To register a digest (hash) algorithm.

@end itemize

Those registration functions will only replace the specified algorithm and leave the rest of subsystem intact.

@subsection Override parts of the backend

In some systems, such as embedded ones, it might be desirable to override big parts of the cryptographic backend, or even all of them. For this reason the following functions are provided.

@itemize

@item @ref{gnutls_crypto_cipher_register2}

To override the cryptographic algorithms backend.

@item @ref{gnutls_crypto_mac_register2}

To override the MAC algorithms backend.

@item @ref{gnutls_crypto_digest_register2}

To override the digest algorithms backend.

@item @ref{gnutls_crypto_rnd_register2}

To override the random number generator backend.

@item @ref{gnutls_crypto_bigint_register2}

To override the big number number operations backend.

@item @ref{gnutls_crypto_pk_register2}

To override the public key encryption backend. This is tight to the big number operations so either both of them should be updated or care must be taken to use the same format.

@end itemize

If all of them are used then GnuTLS will no longer use libgcrypt.

A.1 GNU Free Documentation License

=====

Version 1.3, 3 November 2008

Copyright (C) 2000, 2001, 2002, 2007, 2008 Free Software Foundation, Inc.
`http://fsf.org/'

Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other
functional and useful document "free" in the sense of freedom: to
assure everyone the effective freedom to copy and redistribute it,
with or without modifying it, either commercially or
noncommercially. Secondly, this License preserves for the
author and publisher a way to get credit for their work, while not
being considered responsible for modifications made by others.

This License is a kind of "copyleft", which means that derivative
works of the document must themselves be free in the same sense.
It complements the GNU General Public License, which is a copyleft
license designed for free software.

We have designed this License in order to use it for manuals for
free software, because free software needs free documentation: a
free program should come with manuals providing the same freedoms
that the software does. But this License is not limited to
software manuals; it can be used for any textual work, regardless
of subject matter or whether it is published as a printed book.
We recommend this License principally for works whose purpose is
instruction or reference.

1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium,
that contains a notice placed by the copyright holder saying it
can be distributed under the terms of this License. Such a notice
grants a world-wide, royalty-free license, unlimited in duration,
to use that work under the conditions stated herein. The
"Document", below, refers to any such manual or work. Any member
of the public is a licensee, and is addressed as "you". You
accept the license if you copy, modify or distribute the work in a
way requiring permission under copyright law.

A "Modified Version" of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A "Secondary Section" is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document's overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The "Invariant Sections" are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The "Cover Texts" are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.

A "Transparent" copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not "Transparent" is called "Opaque".

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for

human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The "Title Page" means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, "Title Page" means the text near the most prominent appearance of the work's title, preceding the beginning of the body of the text.

The "publisher" means any person or entity that distributes copies of the Document to the public.

A section "Entitled XYZ" means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as "Acknowledgements", "Dedications", "Endorsements", or "History".) To "Preserve the Title" of such a section when you modify the Document means that it remains a section "Entitled XYZ" according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document's license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to

whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

- A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.
- B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.
- C. State on the Title page the name of the publisher of the Modified Version, as the publisher.
- D. Preserve all the copyright notices of the Document.
- E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.
- F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.
- G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document's license notice.
- H. Include an unaltered copy of this License.
- I. Preserve the section Entitled "History", Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled "History" in the Document, create one stating the title, year, authors, and publisher of the Document as given on its Title Page, then add an item describing the Modified Version as stated in the previous sentence.
- J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for

previous versions it was based on. These may be placed in the "History" section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.

K. For any section Entitled "Acknowledgements" or "Dedications", Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.

L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.

M. Delete any section Entitled "Endorsements". Such a section may not be included in the Modified Version.

N. Do not retitle any existing section to be Entitled "Endorsements" or to conflict in title with any Invariant Section.

O. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version's license notice. These titles must be distinct from any other section titles.

You may add a section Entitled "Endorsements", provided it contains nothing but endorsements of your Modified Version by various parties--for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous

publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.

In the combination, you must combine any sections Entitled "History" in the various original documents, forming one section Entitled "History"; likewise combine any sections Entitled "Acknowledgements", and any sections Entitled "Dedications". You must delete all sections Entitled "Endorsements."

6. COLLECTIONS OF DOCUMENTS

You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

7. AGGREGATION WITH INDEPENDENT WORKS

A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an "aggregate" if the copyright resulting from the compilation is not used to limit the legal rights of the compilation's users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document's Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

8. TRANSLATION

Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled "Acknowledgements", "Dedications", or "History", the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

9. TERMINATION

You may not copy, modify, sublicense, or distribute the Document except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, or distribute it is void, and will automatically terminate your rights under this License.

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a)

provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, receipt of a copy of some or all of the same material does not give you any rights to use it.

10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See [`http://www.gnu.org/copyleft/`](http://www.gnu.org/copyleft/).

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License "or any later version" applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation. If the Document specifies that a proxy can decide which future versions of this License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Document.

11. RELICENSING

"Massive Multiauthor Collaboration Site" (or "MMC Site") means any World Wide Web server that publishes copyrightable works and also provides prominent facilities for anybody to edit those works. A public wiki that anybody can edit is an example of such a server. A "Massive Multiauthor Collaboration" (or "MMC") contained in the site means any set of copyrightable works thus published on the MMC site.

"CC-BY-SA" means the Creative Commons Attribution-Share Alike 3.0 license published by Creative Commons Corporation, a not-for-profit corporation with a principal place of business in San Francisco, California, as well as future copyleft versions of that license published by that same organization.

"Incorporate" means to publish or republish a Document, in whole or in part, as part of another Document.

An MMC is "eligible for relicensing" if it is licensed under this License, and if all works that were first published under this License somewhere other than this MMC, and subsequently incorporated in whole or in part into the MMC, (1) had no cover texts or invariant sections, and (2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site under CC-BY-SA on the same site at any time before August 1, 2009, provided the MMC is eligible for relicensing.

ADDENDUM: How to use this License for your documents

=====

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright (C) YEAR YOUR NAME.

Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.3 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled "GNU Free Documentation License".

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the "with...Texts." line with this:

with the Invariant Sections being LIST THEIR TITLES, with the Front-Cover Texts being LIST, and with the Back-Cover Texts being LIST.

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.

File: gnutls.info, Node: GNU LGPL, Next: GNU GPL, Prev: GNU Free Documentation License, Up: Copying Information

A.2 GNU Lesser General Public License

=====

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid

distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does `_Less_` to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less

of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or

translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
 - a. The modified work must itself be a software library.
 - b. You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
 - c. You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
 - d. If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort

to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or

link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

- a. Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)
- b. Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.
- c. Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.
- d. If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.
- e. Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:
 - a. Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.
 - b. Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.
8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this

License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.
11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation

excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY

OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

ONE LINE TO GIVE THE LIBRARY'S NAME AND AN IDEA OF WHAT IT DOES.
Copyright (C) YEAR NAME OF AUTHOR

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA.

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library
`Frob' (a library for tweaking knobs) written by James Random Hacker.

SIGNATURE OF TY COON, 1 April 1990

Ty Coon, President of Vice

That's all there is to it!

A.3 GNU General Public License

=====

Version 3, 29 June 2007

Copyright (C) 2007 Free Software Foundation, Inc. <http://fsf.org/>

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

=====

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their

rights.

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install or run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products for individuals to use, which is precisely where it is most unacceptable. Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS

=====

0. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work

with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so

exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

- a. The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b. The work must carry prominent notices stating that it is

released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".

- c. You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.
- d. If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

- a. Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
- b. Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software

interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

- c. Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.
- d. Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.
- e. Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option

remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

- a. Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
- b. Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
- c. Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d. Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e. Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or
- f. Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the

additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its

contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that

proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

=====

How to Apply These Terms to Your New Programs

=====

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively state the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

ONE LINE TO GIVE THE PROGRAM'S NAME AND A BRIEF IDEA OF WHAT IT DOES.
Copyright (C) YEAR NAME OF AUTHOR

This program is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program. If not, see [`http://www.gnu.org/licenses/`](http://www.gnu.org/licenses/).

Also add information on how to contact you by electronic and paper mail.

If the program does terminal interaction, make it output a short notice like this when it starts in an interactive mode:

PROGRAM Copyright (C) YEAR NAME OF AUTHOR
This program comes with ABSOLUTELY NO WARRANTY; for details type ``show w``.
This is free software, and you are welcome to redistribute it under certain conditions; type ``show c`` for details.

The hypothetical commands ``show w`` and ``show c`` should show the appropriate parts of the General Public License. Of course, your program's commands might be different; for a GUI interface, you would use an "about box".

You should also get your employer (if you work as a programmer) or school, if any, to sign a "copyright disclaimer" for the program, if necessary. For more information on this, and how to apply and follow the GNU GPL, see [`http://www.gnu.org/licenses/`](http://www.gnu.org/licenses/).

The GNU General Public License does not permit incorporating your

program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License. But first, please read [`http://www.gnu.org/philosophy/why-not-lgpl.html'](http://www.gnu.org/philosophy/why-not-lgpl.html).

(line 9)
- * X.509 Functions: X.509 certificate functions.
(line 6)

Having a separate GNUmakefile lets me `include' the dynamically
generated rules created via cfg.mk (package-local configuration)
as well as maint.mk (generic maintainer rules).
This makefile is used only if you run GNU Make.
It is necessary if you want to build targets usually of interest
only to the maintainer.

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.

51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you

have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you

distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering

access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES

PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>

Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin St, Fifth Floor, Boston, MA 02110-1301 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.
```

The hypothetical commands ``show w'` and ``show c'` should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than ``show w'` and ``show c'`; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
675 Mass Ave, Cambridge, MA 02139, USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free

software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this

License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any

associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by

all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes

make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) 19yy <name of author>
```

```
This program is free software; you can redistribute it and/or modify  
it under the terms of the GNU General Public License as published by  
the Free Software Foundation; either version 2 of the License, or  
(at your option) any later version.
```

```
This program is distributed in the hope that it will be useful,
```

but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.
```

The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any

patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

(Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer

to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent

infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free

Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>

Copyright (C) 19yy <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 59 Temple Place - Suite 330, Boston, MA 02111-1307, USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.
```

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

GNU LESSER GENERAL PUBLIC LICENSE

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.

59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of

free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

GNU LESSER GENERAL PUBLIC LICENSE TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for

writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) The modified work must itself be a software library.
- b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
- c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
- d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you

distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a

work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

- a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that

uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of

MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library `Frob' (a library for tweaking knobs) written by James Random Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether

this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

^L

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those

libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

^L

GNU LESSER GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other

program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) The modified work must itself be a software library.

- b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.

- c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.

- d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2,

instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

^L

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any

patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer

to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent

infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free

Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>

Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.
```

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the program
`Gnomovision' (which makes passes at compilers) written by James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

GNU LESSER GENERAL PUBLIC LICENSE

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.

51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal

permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

^L

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

^L

GNU LESSER GENERAL PUBLIC LICENSE TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from

such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) The modified work must itself be a software library.
- b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
- c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
- d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in

themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

^L

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the

Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

^L

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

- a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under

Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

^L

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on

the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

- a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.
- b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

^L

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to

refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

^L

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing

and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

^L

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.>

Copyright (C) <year> <name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either

version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful,
but WITHOUT ANY WARRANTY; without even the implied warranty of
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU
Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public
License along with this library; if not, write to the Free Software
Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston,
MA 02110-1301, USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the library, if
necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the
library `Frob' (a library for tweaking knobs) written by James Random
Hacker.

<signature of Ty Coon>, 1 April 1990
Ty Coon, President of Vice

That's all there is to it!

GNU LESSER GENERAL PUBLIC LICENSE
Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts
as the successor of the GNU Library Public License, version 2, hence
the version number 2.1.]

Preamble

The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
Licenses are intended to guarantee your freedom to share and change

free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

^L

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The

former contains code derived from the library, whereas the latter must be combined with the library in order to run.

^L

GNU LESSER GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it). Whether that is true depends on what the Library does and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a

fee.

2. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) The modified work must itself be a software library.
- b) You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
- c) You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
- d) If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.

(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of

a storage or distribution medium does not bring the other work under the scope of this License.

3. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

^L

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

4. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

5. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License. Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be

linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

^L

6. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

a) Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)

b) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is

interface-compatible with the version that the work was made with.

c) Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.

d) If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.

e) Verify that the user has already received a copy of these materials or that you have already sent this user a copy.

For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.

^L

7. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.

b) Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

8. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or

distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.

^L

11. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot

impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

13. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.

^L

14. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN

WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

^L

How to Apply These Terms to Your New Libraries

If you develop a new library, and you want it to be of the greatest possible use to the public, we recommend making it free software that everyone can redistribute and change. You can do so by permitting redistribution under these terms (or, alternatively, under the terms of the ordinary General Public License).

To apply these terms, attach the following notices to the library. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the library's name and a brief idea of what it does.>
Copyright (C) <year> <name of author>

This library is free software; you can redistribute it and/or modify it under the terms of the GNU Lesser General Public License as published by the Free Software Foundation; either version 2.1 of the License, or (at your option) any later version.

This library is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU Lesser General Public License for more details.

You should have received a copy of the GNU Lesser General Public License along with this library; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your

school, if any, to sign a "copyright disclaimer" for the library, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the library 'Frob' (a library for tweaking knobs) written by James Random Hacker.

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
675 Mass Ave, Cambridge, MA 02139, USA
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's

source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or

collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt

otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that

system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) 19yy <name of author>
```

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 675 Mass Ave, Cambridge, MA 02139, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) 19yy name of author
```

Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.

The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it,

either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program,

and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component

itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to

apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) 19yy <name of author>
```

```
This program is free software; you can redistribute it and/or modify  
it under the terms of the GNU General Public License as published by  
the Free Software Foundation; either version 2 of the License, or  
(at your option) any later version.
```

```
This program is distributed in the hope that it will be useful,  
but WITHOUT ANY WARRANTY; without even the implied warranty of  
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the  
GNU General Public License for more details.
```

```
You should have received a copy of the GNU General Public License  
along with this program; if not, write to the Free Software
```

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.
```

The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

```

GNU GENERAL PUBLIC LICENSE

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.

59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies

of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that

you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the

notices that refer to this License and to the absence of any warranty;
and give any other recipients of the Program a copy of this License
along with the Program.

You may charge a fee for the physical act of transferring a copy, and
you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion
of it, thus forming a work based on the Program, and copy and
distribute such modifications or work under the terms of Section 1
above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices
stating that you changed the files and the date of any change.

- b) You must cause any work that you distribute or publish, that in
whole or in part contains or is derived from the Program or any
part thereof, to be licensed as a whole at no charge to all third
parties under the terms of this License.

- c) If the modified program normally reads commands interactively
when run, you must cause it, when started running for such
interactive use in the most ordinary way, to print or display an
announcement including an appropriate copyright notice and a

notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of

a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this

License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to

be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free

programs whose distribution conditions are different, write to the author

to ask for permission. For software which is copyrighted by the Free

Software Foundation, write to the Free Software Foundation; we sometimes

make exceptions for this. Our decision will be guided by the two goals

Copyright (c) 2000-2007 by Nicolas Devillard.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains

a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this

License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for

making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you

may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the

author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) 19yy <name of author>
```

This program is free software; you can redistribute it and/or

modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; see the file COPYING. If not, write to the Free Software Foundation, Inc., 59 Temple Place - Suite 330, Boston, MA 02111-1307, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) 19yy name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.
```

The hypothetical commands ``show w'` and ``show c'` should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than ``show w'` and ``show c'`; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the
program `Gnomovision' (which makes passes at compilers) written by
James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

The following individuals contributed in part to the Network Time
 Protocol Distribution Version 4 and are acknowledged as authors of
 this work.

1. [1]Takao Abe <takao_abe@xurb.jp> Clock driver for JJY receivers
2. [2]Mark Andrews <mark_andrews@isc.org> Leitch atomic clock controller
3. [3]Bernd Altmeier <altmeier@atlsoft.de> hopf Elektronik serial

- line and PCI-bus devices
4. [4]Viraj Bais <vbais@mailman1.intel.com> and [5]Clayton Kirkwood <kirkwood@striderfm.intel.com> port to WindowsNT 3.5
 5. [6]Michael Barone <michael,barone@lmco.com> GPSVME fixes
 6. [7]Karl Berry <karl@owl.HQ.ileaf.com> syslog to file option
 7. [8]Greg Brackley <greg.brackley@bigfoot.com> Major rework of WINNT port. Clean up recvbuf and iosignal code into separate modules.
 8. [9]Marc Brett <Marc.Brett@westgeo.com> Magnavox GPS clock driver
 9. [10]Piete Brooks <Piete.Brooks@cl.cam.ac.uk> MSF clock driver, Trimble PARSE support
 10. [11]Nelson B Bolyard <nelson@bolyard.me> update and complete broadcast and crypto features in sntp
 11. [12]Jean-Francois Boudreault <Jean-Francois.Boudreault@viagenie.qc.ca> IPv6 support
 12. [13]Reg Clemens <reg@dwf.com> Oncore driver (Current maintainer)
 13. [14]Steve Clift <clift@ml.csiro.au> OMEGA clock driver
 14. [15]Casey Crellin <casey@csc.co.za> vxWorks (Tornado) port and help with target configuration
 15. [16]Sven Dietrich <sven_dietrich@trimble.com> Palisade reference clock driver, NT adj. residuals, integrated Greg's Winnt port.
 16. [17]John A. Dundas III <dundas@salt.jpl.nasa.gov> Apple A/UX port
 17. [18]Torsten Duwe <duwe@immd4.informatik.uni-erlangen.de> Linux port
 18. [19]Dennis Ferguson <dennis@mrbill.canet.ca> foundation code for NTP Version 2 as specified in RFC-1119
 19. [20]John Hay <jhay@icomtek.csir.co.za> IPv6 support and testing
 20. [21]Dave Hart <davehart@davehart.com> General maintenance, Windows port interpolation rewrite
 21. [22]Claas Hilbrecht <neoclock4x@linum.com> NeoClock4X clock driver
 22. [23]Glenn Hollinger <glenn@herald.usask.ca> GOES clock driver
 23. [24]Mike Iglesias <iglesias@uci.edu> DEC Alpha port
 24. [25]Jim Jagielski <jim@jagubox.gsfc.nasa.gov> A/UX port
 25. [26]Jeff Johnson <jbj@chatham.usdesign.com> massive prototyping overhaul
 26. [27]Hans Lambermont <Hans.Lambermont@nl.origin-it.com> or [28]<H.Lambermont@chello.nl> ntpsweep
 27. [29]Poul-Henning Kamp <phk@FreeBSD.ORG> Oncore driver (Original author)
 28. [30]Frank Kardel [31]<kardel (at) ntp (dot) org> PARSE <GENERIC> (driver 14 reference clocks), STREAMS modules for PARSE, support scripts, syslog cleanup, dynamic interface handling
 29. [32]Johannes Maximilian Kuehn <kuehn@ntp.org> Rewrote sntp to comply with NTPv4 specification, ntpq saveconfig
 30. [33]William L. Jones <jones@hermes.chpc.utexas.edu> RS/6000 AIX modifications, HPUX modifications
 31. [34]Dave Katz <dkatz@cisco.com> RS/6000 AIX port
 32. [35]Craig Leres <leres@ee.lbl.gov> 4.4BSD port, ppsclock, Magnavox GPS clock driver

33. [36]George Lindholm <lindholm@ucs.ubc.ca> SunOS 5.1 port
34. [37]Louis A. Mamakos <louie@ni.umd.edu> MD5-based authentication
35. [38]Lars H. Mathiesen <thorinn@diku.dk> adaptation of foundation code for Version 3 as specified in RFC-1305
36. [39]Danny Mayer <mayer@ntp.org>Network I/O, Windows Port, Code Maintenance
37. [40]David L. Mills <mills@udel.edu> Version 4 foundation, precision kernel; clock drivers: 1, 3, 4, 6, 7, 11, 13, 18, 19, 22, 36
38. [41]Wolfgang Moeller <moeller@gwdgv1.dnet.gwdg.de> VMS port
39. [42]Jeffrey Mogul <mogul@pa.dec.com> ntptrace utility
40. [43]Tom Moore <tmoore@fiemel.daytonoh.ncr.com> i386 svr4 port
41. [44]Kamal A Mostafa <kamal@whence.com> SCO OpenServer port
42. [45]Derek Mulcahy <derek@toybox.demon.co.uk> and [46]Damon Hart-Davis <d@hd.org> ARCRON MSF clock driver
43. [47]Rob Neal <neal@ntp.org> Bancomm refclock and config/parse code maintenance
44. [48]Rainer Pruy <Rainer.Pruy@informatik.uni-erlangen.de> monitoring/trap scripts, statistics file handling
45. [49]Dirce Richards <dirce@zk3.dec.com> Digital UNIX V4.0 port
46. [50]Wilfredo Snchez <wsanchez@apple.com> added support for NetInfo
47. [51]Nick Sayer <mrapple@quack.kfu.com> SunOS streams modules
48. [52]Jack Sasportas <jack@innovativeinternet.com> Saved a Lot of space on the stuff in the html/pic/ subdirectory
49. [53]Ray Schnitzler <schnitz@unipress.com> Unixware1 port
50. [54]Michael Shields <shields@tembel.org> USNO clock driver
51. [55]Jeff Steinman <jss@pebbles.jpl.nasa.gov> Datum PTS clock driver
52. [56]Harlan Stenn <harlan@pfcs.com> GNU automake/autoconfigure makeover, various other bits (see the ChangeLog)
53. [57]Kenneth Stone <ken@sdd.hp.com> HP-UX port
54. [58]Ajit Thyagarajan <ajit@ee.udel.edu>IP multicast/anycast support
55. [59]Tomoaki TSURUOKA <tsuruoka@nc.fukuoka-u.ac.jp>TRAK clock driver
56. [60]Brian Utterback <brian.utterback@oracle.com> General codebase, Solaris issues
57. [61]Loganaden Velvindron <loganaden@gmail.com> Sandboxing (libseccomp) support
58. [62]Paul A Vixie <vixie@vix.com> TrueTime GPS driver, generic TrueTime clock driver
59. [63]Ulrich Windl <Ulrich.Windl@rz.uni-regensburg.de> corrected and validated HTML documents according to the HTML DTD

GNU LESSER GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright (C) 1992-2015 by Bruce Korb - all rights reserved

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

This version of the GNU Lesser General Public License incorporates the terms and conditions of version 3 of the GNU General Public License, supplemented by the additional permissions listed below.

0. Additional Definitions.

As used herein, "this License" refers to version 3 of the GNU Lesser General Public License, and the "GNU GPL" refers to version 3 of the GNU General Public License.

"The Library" refers to a covered work governed by this License, other than an Application or a Combined Work as defined below.

An "Application" is any work that makes use of an interface provided by the Library, but which is not otherwise based on the Library. Defining a subclass of a class defined by the Library is deemed a mode of using an interface provided by the Library.

A "Combined Work" is a work produced by combining or linking an Application with the Library. The particular version of the Library with which the Combined Work was made is also called the "Linked Version".

The "Minimal Corresponding Source" for a Combined Work means the Corresponding Source for the Combined Work, excluding any source code for portions of the Combined Work that, considered in isolation, are based on the Application, and not on the Linked Version.

The "Corresponding Application Code" for a Combined Work means the object code and/or source code for the Application, including any data and utility programs needed for reproducing the Combined Work from the Application, but excluding the System Libraries of the Combined Work.

1. Exception to Section 3 of the GNU GPL.

You may convey a covered work under sections 3 and 4 of this License without being bound by section 3 of the GNU GPL.

2. Conveying Modified Versions.

If you modify a copy of the Library, and, in your modifications, a facility refers to a function or data to be supplied by an Application that uses the facility (other than as an argument passed when the facility is invoked), then you may convey a copy of the modified version:

a) under this License, provided that you make a good faith effort to ensure that, in the event an Application does not supply the function or data, the facility still operates, and performs whatever part of its purpose remains meaningful, or

b) under the GNU GPL, with none of the additional permissions of this License applicable to that copy.

3. Object Code Incorporating Material from Library Header Files.

The object code form of an Application may incorporate material from a header file that is part of the Library. You may convey such object code under terms of your choice, provided that, if the incorporated material is not limited to numerical parameters, data structure layouts and accessors, or small macros, inline functions and templates (ten or fewer lines in length), you do both of the following:

a) Give prominent notice with each copy of the object code that the Library is used in it and that the Library and its use are covered by this License.

b) Accompany the object code with a copy of the GNU GPL and this license document.

4. Combined Works.

You may convey a Combined Work under terms of your choice that, taken together, effectively do not restrict modification of the portions of the Library contained in the Combined Work and reverse engineering for debugging such modifications, if you also do each of the following:

a) Give prominent notice with each copy of the Combined Work that the Library is used in it and that the Library and its use are covered by this License.

b) Accompany the Combined Work with a copy of the GNU GPL and this license document.

c) For a Combined Work that displays copyright notices during execution, include the copyright notice for the Library among these notices, as well as a reference directing the user to the copies of the GNU GPL and this license document.

d) Do one of the following:

0) Convey the Minimal Corresponding Source under the terms of this License, and the Corresponding Application Code in a form

suitable for, and under terms that permit, the user to recombine or relink the Application with a modified version of the Linked Version to produce a modified Combined Work, in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.

1) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (a) uses at run time a copy of the Library already present on the user's computer system, and (b) will operate properly with a modified version of the Library that is interface-compatible with the Linked Version.

e) Provide Installation Information, but only if you would otherwise be required to provide such information under section 6 of the GNU GPL, and only to the extent that such information is necessary to install and execute a modified version of the Combined Work produced by recombining or relinking the Application with a modified version of the Linked Version. (If you use option 4d0, the Installation Information must accompany the Minimal Corresponding Source and Corresponding Application Code. If you use option 4d1, you must provide the Installation Information in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.)

5. Combined Libraries.

You may place library facilities that are a work based on the Library side by side in a single library together with other library facilities that are not Applications and are not covered by this License, and convey such a combined library under terms of your choice, if you do both of the following:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities, conveyed under the terms of this License.

b) Give prominent notice with the combined library that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

6. Revised Versions of the GNU Lesser General Public License.

The Free Software Foundation may publish revised and/or new versions of the GNU Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library as you received it specifies that a certain numbered version of the GNU Lesser General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that published version or of any later version published by the Free Software Foundation. If the Library as you received it does not specify a version number of the GNU Lesser General Public License, you may choose any version of the GNU Lesser General Public License ever published by the Free Software Foundation.

If the Library as you received it specifies that a proxy can decide whether future versions of the GNU Lesser General Public License shall apply, that proxy's public statement of acceptance of any version is permanent authorization for you to choose that version for the Library.

GNU GENERAL PUBLIC LICENSE
Version 3, 29 June 2007

Copyright (C) 1992-2015 by Bruce Korb - all rights reserved
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install or run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products for individuals to use, which is precisely where it is most unacceptable. Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and

"recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component

(kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the terms of section 4, provided that you also meet all of these conditions:

- a) The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".
- c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts,

regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.

d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.

b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a

fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

- a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal

Notices displayed by works containing it; or

- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or
- f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the form of a separately written license, or stated as exceptions; the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and

finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of

rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license, and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or

arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF

SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively state the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) by Bruce Korb - all rights reserved
```

```
This program is free software: you can redistribute it and/or modify  
it under the terms of the GNU General Public License as published by  
the Free Software Foundation, either version 3 of the License, or  
(at your option) any later version.
```

```
This program is distributed in the hope that it will be useful,  
but WITHOUT ANY WARRANTY; without even the implied warranty of  
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the  
GNU General Public License for more details.
```

```
You should have received a copy of the GNU General Public License  
along with this program. If not, see <http://www.gnu.org/licenses/>.
```

Also add information on how to contact you by electronic and paper mail.

If the program does terminal interaction, make it output a short notice like this when it starts in an interactive mode:

```
<program> Copyright (C) by Bruce Korb - all rights reserved  
This program comes with ABSOLUTELY NO WARRANTY; for details type `show w'.  
This is free software, and you are welcome to redistribute it
```

under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, your program's commands might be different; for a GUI interface, you would use an "about box".

You should also get your employer (if you work as a programmer) or school, if any, to sign a "copyright disclaimer" for the program, if necessary. For more information on this, and how to apply and follow the GNU GPL, see <<http://www.gnu.org/licenses/>>.

The GNU General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License. But first, please read <<http://www.gnu.org/philosophy/why-not-lgpl.html>>.

Libevent is available for use under the following license, commonly known as the 3-clause (or "modified") BSD license:

GNU GENERAL PUBLIC LICENSE
Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.,
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Lesser General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid

anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program).

Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
- c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest

your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program

except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed

through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

```
<one line to give the program's name and a brief idea of what it does.>  
Copyright (C) <year> <name of author>
```

```
This program is free software; you can redistribute it and/or modify  
it under the terms of the GNU General Public License as published by  
the Free Software Foundation; either version 2 of the License, or  
(at your option) any later version.
```

```
This program is distributed in the hope that it will be useful,  
but WITHOUT ANY WARRANTY; without even the implied warranty of  
MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the  
GNU General Public License for more details.
```

```
You should have received a copy of the GNU General Public License along  
with this program; if not, write to the Free Software Foundation, Inc.,  
51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA.
```

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) year name of author  
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
```

This is free software, and you are welcome to redistribute it under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program `Gnomovision' (which makes passes at compilers) written by James Hacker.

<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License.

GNU LESSER GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright (C) 2007 Free Software Foundation, Inc. <<http://fsf.org/>>
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

This version of the GNU Lesser General Public License incorporates
the terms and conditions of version 3 of the GNU General Public
License, supplemented by the additional permissions listed below.

0. Additional Definitions.

As used herein, "this License" refers to version 3 of the GNU Lesser
General Public License, and the "GNU GPL" refers to version 3 of the GNU
General Public License.

"The Library" refers to a covered work governed by this License,
other than an Application or a Combined Work as defined below.

An "Application" is any work that makes use of an interface provided
by the Library, but which is not otherwise based on the Library.
Defining a subclass of a class defined by the Library is deemed a mode
of using an interface provided by the Library.

A "Combined Work" is a work produced by combining or linking an
Application with the Library. The particular version of the Library
with which the Combined Work was made is also called the "Linked
Version".

The "Minimal Corresponding Source" for a Combined Work means the
Corresponding Source for the Combined Work, excluding any source code
for portions of the Combined Work that, considered in isolation, are
based on the Application, and not on the Linked Version.

The "Corresponding Application Code" for a Combined Work means the
object code and/or source code for the Application, including any data
and utility programs needed for reproducing the Combined Work from the
Application, but excluding the System Libraries of the Combined Work.

1. Exception to Section 3 of the GNU GPL.

You may convey a covered work under sections 3 and 4 of this License
without being bound by section 3 of the GNU GPL.

2. Conveying Modified Versions.

If you modify a copy of the Library, and, in your modifications, a facility refers to a function or data to be supplied by an Application that uses the facility (other than as an argument passed when the facility is invoked), then you may convey a copy of the modified version:

- a) under this License, provided that you make a good faith effort to ensure that, in the event an Application does not supply the function or data, the facility still operates, and performs whatever part of its purpose remains meaningful, or
- b) under the GNU GPL, with none of the additional permissions of this License applicable to that copy.

3. Object Code Incorporating Material from Library Header Files.

The object code form of an Application may incorporate material from a header file that is part of the Library. You may convey such object code under terms of your choice, provided that, if the incorporated material is not limited to numerical parameters, data structure layouts and accessors, or small macros, inline functions and templates (ten or fewer lines in length), you do both of the following:

- a) Give prominent notice with each copy of the object code that the Library is used in it and that the Library and its use are covered by this License.
- b) Accompany the object code with a copy of the GNU GPL and this license document.

4. Combined Works.

You may convey a Combined Work under terms of your choice that, taken together, effectively do not restrict modification of the portions of the Library contained in the Combined Work and reverse engineering for debugging such modifications, if you also do each of the following:

- a) Give prominent notice with each copy of the Combined Work that the Library is used in it and that the Library and its use are covered by this License.
- b) Accompany the Combined Work with a copy of the GNU GPL and this license document.
- c) For a Combined Work that displays copyright notices during execution, include the copyright notice for the Library among these notices, as well as a reference directing the user to the

copies of the GNU GPL and this license document.

d) Do one of the following:

0) Convey the Minimal Corresponding Source under the terms of this License, and the Corresponding Application Code in a form suitable for, and under terms that permit, the user to recombine or relink the Application with a modified version of the Linked Version to produce a modified Combined Work, in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.

1) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (a) uses at run time a copy of the Library already present on the user's computer system, and (b) will operate properly with a modified version of the Library that is interface-compatible with the Linked Version.

e) Provide Installation Information, but only if you would otherwise be required to provide such information under section 6 of the GNU GPL, and only to the extent that such information is necessary to install and execute a modified version of the Combined Work produced by recombining or relinking the Application with a modified version of the Linked Version. (If you use option 4d0, the Installation Information must accompany the Minimal Corresponding Source and Corresponding Application Code. If you use option 4d1, you must provide the Installation Information in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.)

5. Combined Libraries.

You may place library facilities that are a work based on the Library side by side in a single library together with other library facilities that are not Applications and are not covered by this License, and convey such a combined library under terms of your choice, if you do both of the following:

a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities, conveyed under the terms of this License.

b) Give prominent notice with the combined library that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

6. Revised Versions of the GNU Lesser General Public License.

The Free Software Foundation may publish revised and/or new versions of the GNU Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library as you received it specifies that a certain numbered version of the GNU Lesser General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that published version or of any later version published by the Free Software Foundation. If the Library as you received it does not specify a version number of the GNU Lesser General Public License, you may choose any version of the GNU Lesser General Public License ever published by the Free Software Foundation.

If the Library as you received it specifies that a proxy can decide whether future versions of the GNU Lesser General Public License shall apply, that proxy's public statement of acceptance of any version is permanent authorization for you to choose that version for the Library.

The following individuals contributed in part to the Network Time Protocol Distribution Version 4 and are acknowledged as authors of this work.

1. [1]Takao Abe <takao_abe@xurb.jp> Clock driver for JJY receivers
2. [2]Mark Andrews <mark_andrews@isc.org> Leitch atomic clock controller
3. [3]Bernd Altmeier <altmeier@atsoft.de> hopf Elektronik serial line and PCI-bus devices
4. [4]Viraj Bais <vbais@mailman1.intel.com> and [5]Clayton Kirkwood <kirkwood@striderfm.intel.com> port to WindowsNT 3.5
5. [6]Michael Barone <michael,barone@lmco.com> GPSVME fixes
6. [7]Karl Berry <karl@owl.HQ.ileaf.com> syslog to file option
7. [8]Greg Brackley <greg.brackley@bigfoot.com> Major rework of WINNT port. Clean up rcvbuf and iosignal code into separate modules.
8. [9]Marc Brett <Marc.Brett@westgeo.com> Magnavox GPS clock driver
9. [10]Piete Brooks <Piete.Brooks@cl.cam.ac.uk> MSF clock driver, Trimble PARSE support
10. [11]Nelson B Bolyard <nelson@bolyard.me> update and complete broadcast and crypto features in sntp
11. [12]Jean-Francois Boudreault <Jean-Francois.Boudreault@viagenie.qc.ca> IPv6 support
12. [13]Reg Clemens <reg@dwf.com> Oncore driver (Current maintainer)
13. [14]Steve Clift <clift@ml.csiro.au> OMEGA clock driver
14. [15]Casey Crellin <casey@csc.co.za> vxWorks (Tornado) port and help with target configuration
15. [16]Sven Dietrich <sven_dietrich@trimble.com> Palisade reference clock driver, NT adj. residuals, integrated Greg's Winnt port.
16. [17]John A. Dundas III <dundas@salt.jpl.nasa.gov> Apple A/UX port
17. [18]Torsten Duwe <duwe@immd4.informatik.uni-erlangen.de> Linux port
18. [19]Dennis Ferguson <dennis@mrbill.canet.ca> foundation code for NTP Version 2 as specified in RFC-1119
19. [20]John Hay <jhay@icomtek.csir.co.za> IPv6 support and testing
20. [21]Dave Hart <davehart@davehart.com> General maintenance, Windows port interpolation rewrite
21. [22]Claas Hilbrecht <neoclock4x@linum.com> NeoClock4X clock driver
22. [23]Glenn Hollinger <glenn@herald.usask.ca> GOES clock driver
23. [24]Mike Iglesias <iglesias@uci.edu> DEC Alpha port
24. [25]Jim Jagielski <jim@jagubox.gsfc.nasa.gov> A/UX port
25. [26]Jeff Johnson <jbj@chatham.usdesign.com> massive prototyping overhaul

26. [27]Hans Lambermont <Hans.Lambermont@nl.origin-it.com> or
[28]<H.Lambermont@chello.nl> ntpsweep
27. [29]Poul-Henning Kamp <phk@FreeBSD.ORG> Oncore driver (Original author)
28. [30]Frank Kardel [31]<kardel (at) ntp (dot) org> PARSE <GENERIC> (driver 14 reference clocks), STREAMS modules for PARSE, support scripts, syslog cleanup, dynamic interface handling
29. [32]Johannes Maximilian Kuehn <kuehn@ntp.org> Rewrote sntp to comply with NTPv4 specification, ntpq saveconfig
30. [33]William L. Jones <jones@hermes.chpc.utexas.edu> RS/6000 AIX modifications, HPUX modifications
31. [34]Dave Katz <dkatz@cisco.com> RS/6000 AIX port
32. [35]Craig Leres <leres@ee.lbl.gov> 4.4BSD port, ppsclock, Magnavox GPS clock driver
33. [36]George Lindholm <lindholm@ucs.ubc.ca> SunOS 5.1 port
34. [37]Louis A. Mamakos <louie@ni.umd.edu> MD5-based authentication
35. [38]Lars H. Mathiesen <thorinn@diku.dk> adaptation of foundation code for Version 3 as specified in RFC-1305
36. [39]Danny Mayer <mayer@ntp.org>Network I/O, Windows Port, Code Maintenance

GNU LESSER GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright (C) 1992-2015 by Bruce Korb - all rights reserved
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

This version of the GNU Lesser General Public License incorporates the terms and conditions of version 3 of the GNU General Public License, supplemented by the additional permissions listed below.

0. Additional Definitions.

As used herein, "this License" refers to version 3 of the GNU Lesser General Public License, and the "GNU GPL" refers to version 3 of the GNU General Public License.

"The Library" refers to a covered work governed by this License, other than an Application or a Combined Work as defined below.

An "Application" is any work that makes use of an interface provided by the Library, but which is not otherwise based on the Library. Defining a subclass of a class defined by the Library is deemed a mode of using an interface provided by the Library.

A "Combined Work" is a work produced by combining or linking an Application with the Library. The particular version of the Library with which the Combined Work was made is also called the "Linked Version".

The "Minimal Corresponding Source" for a Combined Work means the Corresponding Source for the Combined Work, excluding any source code for portions of the Combined Work that, considered in isolation, are based on the Application, and not on the Linked Version.

The "Corresponding Application Code" for a Combined Work means the object code and/or source code for the Application, including any data and utility programs needed for reproducing the Combined Work from the Application, but excluding the System Libraries of the Combined Work.

1. Exception to Section 3 of the GNU GPL.

You may convey a covered work under sections 3 and 4 of this License without being bound by section 3 of the GNU GPL.

2. Conveying Modified Versions.

If you modify a copy of the Library, and, in your modifications, a facility refers to a function or data to be supplied by an Application that uses the facility (other than as an argument passed when the facility is invoked), then you may convey a copy of the modified version:

- a) under this License, provided that you make a good faith effort to ensure that, in the event an Application does not supply the function or data, the facility still operates, and performs whatever part of its purpose remains meaningful, or
- b) under the GNU GPL, with none of the additional permissions of this License applicable to that copy.

3. Object Code Incorporating Material from Library Header Files.

The object code form of an Application may incorporate material from a header file that is part of the Library. You may convey such object code under terms of your choice, provided that, if the incorporated material is not limited to numerical parameters, data structure layouts and accessors, or small macros, inline functions and templates (ten or fewer lines in length), you do both of the following:

- a) Give prominent notice with each copy of the object code that the Library is used in it and that the Library and its use are covered by this License.
- b) Accompany the object code with a copy of the GNU GPL and this license document.

4. Combined Works.

You may convey a Combined Work under terms of your choice that, taken together, effectively do not restrict modification of the portions of the Library contained in the Combined Work and reverse engineering for debugging such modifications, if you also do each of the following:

- a) Give prominent notice with each copy of the Combined Work that the Library is used in it and that the Library and its use are

covered by this License.

b) Accompany the Combined Work with a copy of the GNU GPL and this license document.

c) For a Combined Work that displays copyright notices during execution, include the copyright notice for the Library among these notices, as well as a reference directing the user to the copies of the GNU GPL and this license document.

d) Do one of the following:

0) Convey the Minimal Corresponding Source under the terms of this License, and the Corresponding Application Code in a form suitable for, and under terms that permit, the user to recombine or relink the Application with a modified version of the Linked Version to produce a modified Combined Work, in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.

1) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (a) uses at run time a copy of the Library already present on the user's computer system, and (b) will operate properly with a modified version of the Library that is interface-compatible with the Linked Version.

e) Provide Installation Information, but only if you would otherwise be required to provide such information under section 6 of the GNU GPL, and only to the extent that such information is necessary to install and execute a modified version of the Combined Work produced by recombining or relinking the Application with a modified version of the Linked Version. (If you use option 4d0, the Installation Information must accompany the Minimal Corresponding Source and Corresponding Application Code. If you use option 4d1, you must provide the Installation Information in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.)

5. Combined Libraries.

You may place library facilities that are a work based on the Library side by side in a single library together with other library facilities that are not Applications and are not covered by this License, and convey such a combined library under terms of your choice, if you do both of the following:

a) Accompany the combined library with a copy of the same work based

on the Library, uncombined with any other library facilities, conveyed under the terms of this License.

b) Give prominent notice with the combined library that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

6. Revised Versions of the GNU Lesser General Public License.

The Free Software Foundation may publish revised and/or new versions of the GNU Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library as you received it specifies that a certain numbered version of the GNU Lesser General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that published version or of any later version published by the Free Software Foundation. If the Library as you received it does not specify a version number of the GNU Lesser General Public License, you may choose any version of the GNU Lesser General Public License ever published by the Free Software Foundation.

If the Library as you received it specifies that a proxy can decide whether future versions of the GNU Lesser General Public License shall apply, that proxy's public statement of acceptance of any version is permanent authorization for you to choose that version for the Library.

GNU GENERAL PUBLIC LICENSE

Version 3, 29 June 2007

Copyright (C) 1992-2015 by Bruce Korb - all rights reserved
Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The GNU General Public License is a free, copyleft license for software and other kinds of works.

The licenses for most software and other practical works are designed to take away your freedom to share and change the works. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change all versions of a program--to make sure it remains free software for all its users. We, the Free Software Foundation, use the GNU General Public License for most of our software; it applies also to any other work released this way by its authors. You can apply it to

your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for them if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs, and that you know you can do these things.

To protect your rights, we need to prevent others from denying you these rights or asking you to surrender the rights. Therefore, you have certain responsibilities if you distribute copies of the software, or if you modify it: responsibilities to respect the freedom of others.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must pass on to the recipients the same freedoms that you received. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

Developers that use the GNU GPL protect your rights with two steps: (1) assert copyright on the software, and (2) offer you this License giving you legal permission to copy, distribute and/or modify it.

For the developers' and authors' protection, the GPL clearly explains that there is no warranty for this free software. For both users' and authors' sake, the GPL requires that modified versions be marked as changed, so that their problems will not be attributed erroneously to authors of previous versions.

Some devices are designed to deny users access to install or run modified versions of the software inside them, although the manufacturer can do so. This is fundamentally incompatible with the aim of protecting users' freedom to change the software. The systematic pattern of such abuse occurs in the area of products for individuals to use, which is precisely where it is most unacceptable. Therefore, we have designed this version of the GPL to prohibit the practice for those products. If such problems arise substantially in other domains, we stand ready to extend this provision to those domains in future versions of the GPL, as needed to protect the freedom of users.

Finally, every program is threatened constantly by software patents. States should not allow patents to restrict development and use of software on general-purpose computers, but in those that do, we wish to avoid the special danger that patents applied to a free program could make it effectively proprietary. To prevent this, the GPL assures that patents cannot be used to render the program non-free.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS

0. Definitions.

"This License" refers to version 3 of the GNU General Public License.

"Copyright" also means copyright-like laws that apply to other kinds of works, such as semiconductor masks.

"The Program" refers to any copyrightable work licensed under this License. Each licensee is addressed as "you". "Licensees" and "recipients" may be individuals or organizations.

To "modify" a work means to copy from or adapt all or part of the work in a fashion requiring copyright permission, other than the making of an exact copy. The resulting work is called a "modified version" of the earlier work or a work "based on" the earlier work.

A "covered work" means either the unmodified Program or a work based on the Program.

To "propagate" a work means to do anything with it that, without permission, would make you directly or secondarily liable for infringement under applicable copyright law, except executing it on a computer or modifying a private copy. Propagation includes copying, distribution (with or without modification), making available to the public, and in some countries other activities as well.

To "convey" a work means any kind of propagation that enables other parties to make or receive copies. Mere interaction with a user through a computer network, with no transfer of a copy, is not conveying.

An interactive user interface displays "Appropriate Legal Notices" to the extent that it includes a convenient and prominently visible feature that (1) displays an appropriate copyright notice, and (2) tells the user that there is no warranty for the work (except to the extent that warranties are provided), that licensees may convey the work under this License, and how to view a copy of this License. If the interface presents a list of user commands or options, such as a menu, a prominent item in the list meets this criterion.

1. Source Code.

The "source code" for a work means the preferred form of the work for making modifications to it. "Object code" means any non-source

form of a work.

A "Standard Interface" means an interface that either is an official standard defined by a recognized standards body, or, in the case of interfaces specified for a particular programming language, one that is widely used among developers working in that language.

The "System Libraries" of an executable work include anything, other than the work as a whole, that (a) is included in the normal form of packaging a Major Component, but which is not part of that Major Component, and (b) serves only to enable use of the work with that Major Component, or to implement a Standard Interface for which an implementation is available to the public in source code form. A "Major Component", in this context, means a major essential component (kernel, window system, and so on) of the specific operating system (if any) on which the executable work runs, or a compiler used to produce the work, or an object code interpreter used to run it.

The "Corresponding Source" for a work in object code form means all the source code needed to generate, install, and (for an executable work) run the object code and to modify the work, including scripts to control those activities. However, it does not include the work's System Libraries, or general-purpose tools or generally available free programs which are used unmodified in performing those activities but which are not part of the work. For example, Corresponding Source includes interface definition files associated with source files for the work, and the source code for shared libraries and dynamically linked subprograms that the work is specifically designed to require, such as by intimate data communication or control flow between those subprograms and other parts of the work.

The Corresponding Source need not include anything that users can regenerate automatically from other parts of the Corresponding Source.

The Corresponding Source for a work in source code form is that same work.

2. Basic Permissions.

All rights granted under this License are granted for the term of copyright on the Program, and are irrevocable provided the stated conditions are met. This License explicitly affirms your unlimited permission to run the unmodified Program. The output from running a covered work is covered by this License only if the output, given its content, constitutes a covered work. This License acknowledges your rights of fair use or other equivalent, as provided by copyright law.

You may make, run and propagate covered works that you do not convey, without conditions so long as your license otherwise remains in force. You may convey covered works to others for the sole purpose of having them make modifications exclusively for you, or provide you with facilities for running those works, provided that you comply with the terms of this License in conveying all material for which you do not control copyright. Those thus making or running the covered works for you must do so exclusively on your behalf, under your direction and control, on terms that prohibit them from making any copies of your copyrighted material outside their relationship with you.

Conveying under any other circumstances is permitted solely under the conditions stated below. Sublicensing is not allowed; section 10 makes it unnecessary.

3. Protecting Users' Legal Rights From Anti-Circumvention Law.

No covered work shall be deemed part of an effective technological measure under any applicable law fulfilling obligations under article 11 of the WIPO copyright treaty adopted on 20 December 1996, or similar laws prohibiting or restricting circumvention of such measures.

When you convey a covered work, you waive any legal power to forbid circumvention of technological measures to the extent such circumvention is effected by exercising rights under this License with respect to the covered work, and you disclaim any intention to limit operation or modification of the work as a means of enforcing, against the work's users, your or third parties' legal rights to forbid circumvention of technological measures.

4. Conveying Verbatim Copies.

You may convey verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice; keep intact all notices stating that this License and any non-permissive terms added in accord with section 7 apply to the code; keep intact all notices of the absence of any warranty; and give all recipients a copy of this License along with the Program.

You may charge any price or no price for each copy that you convey, and you may offer support or warranty protection for a fee.

5. Conveying Modified Source Versions.

You may convey a work based on the Program, or the modifications to produce it from the Program, in the form of source code under the

terms of section 4, provided that you also meet all of these conditions:

- a) The work must carry prominent notices stating that you modified it, and giving a relevant date.
- b) The work must carry prominent notices stating that it is released under this License and any conditions added under section 7. This requirement modifies the requirement in section 4 to "keep intact all notices".
- c) You must license the entire work, as a whole, under this License to anyone who comes into possession of a copy. This License will therefore apply, along with any applicable section 7 additional terms, to the whole of the work, and all its parts, regardless of how they are packaged. This License gives no permission to license the work in any other way, but it does not invalidate such permission if you have separately received it.
- d) If the work has interactive user interfaces, each must display Appropriate Legal Notices; however, if the Program has interactive interfaces that do not display Appropriate Legal Notices, your work need not make them do so.

A compilation of a covered work with other separate and independent works, which are not by their nature extensions of the covered work, and which are not combined with it such as to form a larger program, in or on a volume of a storage or distribution medium, is called an "aggregate" if the compilation and its resulting copyright are not used to limit the access or legal rights of the compilation's users beyond what the individual works permit. Inclusion of a covered work in an aggregate does not cause this License to apply to the other parts of the aggregate.

6. Conveying Non-Source Forms.

You may convey a covered work in object code form under the terms of sections 4 and 5, provided that you also convey the machine-readable Corresponding Source under the terms of this License, in one of these ways:

- a) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by the Corresponding Source fixed on a durable physical medium customarily used for software interchange.
- b) Convey the object code in, or embodied in, a physical product (including a physical distribution medium), accompanied by a written offer, valid for at least three years and valid for as

long as you offer spare parts or customer support for that product model, to give anyone who possesses the object code either (1) a copy of the Corresponding Source for all the software in the product that is covered by this License, on a durable physical medium customarily used for software interchange, for a price no more than your reasonable cost of physically performing this conveying of source, or (2) access to copy the Corresponding Source from a network server at no charge.

c) Convey individual copies of the object code with a copy of the written offer to provide the Corresponding Source. This alternative is allowed only occasionally and noncommercially, and only if you received the object code with such an offer, in accord with subsection 6b.

d) Convey the object code by offering access from a designated place (gratis or for a charge), and offer equivalent access to the Corresponding Source in the same way through the same place at no further charge. You need not require recipients to copy the Corresponding Source along with the object code. If the place to copy the object code is a network server, the Corresponding Source may be on a different server (operated by you or a third party) that supports equivalent copying facilities, provided you maintain clear directions next to the object code saying where to find the Corresponding Source. Regardless of what server hosts the Corresponding Source, you remain obligated to ensure that it is available for as long as needed to satisfy these requirements.

e) Convey the object code using peer-to-peer transmission, provided you inform other peers where the object code and Corresponding Source of the work are being offered to the general public at no charge under subsection 6d.

A separable portion of the object code, whose source code is excluded from the Corresponding Source as a System Library, need not be included in conveying the object code work.

A "User Product" is either (1) a "consumer product", which means any tangible personal property which is normally used for personal, family, or household purposes, or (2) anything designed or sold for incorporation into a dwelling. In determining whether a product is a consumer product, doubtful cases shall be resolved in favor of coverage. For a particular product received by a particular user, "normally used" refers to a typical or common use of that class of product, regardless of the status of the particular user or of the way in which the particular user actually uses, or expects or is expected to use, the product. A product is a consumer product regardless of whether the product has substantial commercial, industrial or non-consumer uses, unless such uses represent

the only significant mode of use of the product.

"Installation Information" for a User Product means any methods, procedures, authorization keys, or other information required to install and execute modified versions of a covered work in that User Product from a modified version of its Corresponding Source. The information must suffice to ensure that the continued functioning of the modified object code is in no case prevented or interfered with solely because modification has been made.

If you convey an object code work under this section in, or with, or specifically for use in, a User Product, and the conveying occurs as part of a transaction in which the right of possession and use of the User Product is transferred to the recipient in perpetuity or for a fixed term (regardless of how the transaction is characterized), the Corresponding Source conveyed under this section must be accompanied by the Installation Information. But this requirement does not apply if neither you nor any third party retains the ability to install modified object code on the User Product (for example, the work has been installed in ROM).

The requirement to provide Installation Information does not include a requirement to continue to provide support service, warranty, or updates for a work that has been modified or installed by the recipient, or for the User Product in which it has been modified or installed. Access to a network may be denied when the modification itself materially and adversely affects the operation of the network or violates the rules and protocols for communication across the network.

Corresponding Source conveyed, and Installation Information provided, in accord with this section must be in a format that is publicly documented (and with an implementation available to the public in source code form), and must require no special password or key for unpacking, reading or copying.

7. Additional Terms.

"Additional permissions" are terms that supplement the terms of this License by making exceptions from one or more of its conditions. Additional permissions that are applicable to the entire Program shall be treated as though they were included in this License, to the extent that they are valid under applicable law. If additional permissions apply only to part of the Program, that part may be used separately under those permissions, but the entire Program remains governed by this License without regard to the additional permissions.

When you convey a copy of a covered work, you may at your option remove any additional permissions from that copy, or from any part of

it. (Additional permissions may be written to require their own removal in certain cases when you modify the work.) You may place additional permissions on material, added by you to a covered work, for which you have or can give appropriate copyright permission.

Notwithstanding any other provision of this License, for material you add to a covered work, you may (if authorized by the copyright holders of that material) supplement the terms of this License with terms:

- a) Disclaiming warranty or limiting liability differently from the terms of sections 15 and 16 of this License; or
- b) Requiring preservation of specified reasonable legal notices or author attributions in that material or in the Appropriate Legal Notices displayed by works containing it; or
- c) Prohibiting misrepresentation of the origin of that material, or requiring that modified versions of such material be marked in reasonable ways as different from the original version; or
- d) Limiting the use for publicity purposes of names of licensors or authors of the material; or
- e) Declining to grant rights under trademark law for use of some trade names, trademarks, or service marks; or
- f) Requiring indemnification of licensors and authors of that material by anyone who conveys the material (or modified versions of it) with contractual assumptions of liability to the recipient, for any liability that these contractual assumptions directly impose on those licensors and authors.

All other non-permissive additional terms are considered "further restrictions" within the meaning of section 10. If the Program as you received it, or any part of it, contains a notice stating that it is governed by this License along with a term that is a further restriction, you may remove that term. If a license document contains a further restriction but permits relicensing or conveying under this License, you may add to a covered work material governed by the terms of that license document, provided that the further restriction does not survive such relicensing or conveying.

If you add terms to a covered work in accord with this section, you must place, in the relevant source files, a statement of the additional terms that apply to those files, or a notice indicating where to find the applicable terms.

Additional terms, permissive or non-permissive, may be stated in the

form of a separately written license, or stated as exceptions;
the above requirements apply either way.

8. Termination.

You may not propagate or modify a covered work except as expressly provided under this License. Any attempt otherwise to propagate or modify it is void, and will automatically terminate your rights under this License (including any patent licenses granted under the third paragraph of section 11).

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.

Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, you do not qualify to receive new licenses for the same material under section 10.

9. Acceptance Not Required for Having Copies.

You are not required to accept this License in order to receive or run a copy of the Program. Ancillary propagation of a covered work occurring solely as a consequence of using peer-to-peer transmission to receive a copy likewise does not require acceptance. However, nothing other than this License grants you permission to propagate or modify any covered work. These actions infringe copyright if you do not accept this License. Therefore, by modifying or propagating a covered work, you indicate your acceptance of this License to do so.

10. Automatic Licensing of Downstream Recipients.

Each time you convey a covered work, the recipient automatically receives a license from the original licensors, to run, modify and propagate that work, subject to this License. You are not responsible for enforcing compliance by third parties with this License.

An "entity transaction" is a transaction transferring control of an organization, or substantially all assets of one, or subdividing an organization, or merging organizations. If propagation of a covered work results from an entity transaction, each party to that transaction who receives a copy of the work also receives whatever licenses to the work the party's predecessor in interest had or could give under the previous paragraph, plus a right to possession of the Corresponding Source of the work from the predecessor in interest, if the predecessor has it or can get it with reasonable efforts.

You may not impose any further restrictions on the exercise of the rights granted or affirmed under this License. For example, you may not impose a license fee, royalty, or other charge for exercise of rights granted under this License, and you may not initiate litigation (including a cross-claim or counterclaim in a lawsuit) alleging that any patent claim is infringed by making, using, selling, offering for sale, or importing the Program or any portion of it.

11. Patents.

A "contributor" is a copyright holder who authorizes use under this License of the Program or a work on which the Program is based. The work thus licensed is called the contributor's "contributor version".

A contributor's "essential patent claims" are all patent claims owned or controlled by the contributor, whether already acquired or hereafter acquired, that would be infringed by some manner, permitted by this License, of making, using, or selling its contributor version, but do not include claims that would be infringed only as a consequence of further modification of the contributor version. For purposes of this definition, "control" includes the right to grant patent sublicenses in a manner consistent with the requirements of this License.

Each contributor grants you a non-exclusive, worldwide, royalty-free patent license under the contributor's essential patent claims, to make, use, sell, offer for sale, import and otherwise run, modify and propagate the contents of its contributor version.

In the following three paragraphs, a "patent license" is any express agreement or commitment, however denominated, not to enforce a patent (such as an express permission to practice a patent or covenant not to sue for patent infringement). To "grant" such a patent license to a party means to make such an agreement or commitment not to enforce a patent against the party.

If you convey a covered work, knowingly relying on a patent license,

and the Corresponding Source of the work is not available for anyone to copy, free of charge and under the terms of this License, through a publicly available network server or other readily accessible means, then you must either (1) cause the Corresponding Source to be so available, or (2) arrange to deprive yourself of the benefit of the patent license for this particular work, or (3) arrange, in a manner consistent with the requirements of this License, to extend the patent license to downstream recipients. "Knowingly relying" means you have actual knowledge that, but for the patent license, your conveying the covered work in a country, or your recipient's use of the covered work in a country, would infringe one or more identifiable patents in that country that you have reason to believe are valid.

If, pursuant to or in connection with a single transaction or arrangement, you convey, or propagate by procuring conveyance of, a covered work, and grant a patent license to some of the parties receiving the covered work authorizing them to use, propagate, modify or convey a specific copy of the covered work, then the patent license you grant is automatically extended to all recipients of the covered work and works based on it.

A patent license is "discriminatory" if it does not include within the scope of its coverage, prohibits the exercise of, or is conditioned on the non-exercise of one or more of the rights that are specifically granted under this License. You may not convey a covered work if you are a party to an arrangement with a third party that is in the business of distributing software, under which you make payment to the third party based on the extent of your activity of conveying the work, and under which the third party grants, to any of the parties who would receive the covered work from you, a discriminatory patent license (a) in connection with copies of the covered work conveyed by you (or copies made from those copies), or (b) primarily for and in connection with specific products or compilations that contain the covered work, unless you entered into that arrangement, or that patent license was granted, prior to 28 March 2007.

Nothing in this License shall be construed as excluding or limiting any implied license or other defenses to infringement that may otherwise be available to you under applicable patent law.

12. No Surrender of Others' Freedom.

If conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot convey a covered work so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not convey it at all. For example, if you agree to terms that obligate you

to collect a royalty for further conveying from those to whom you convey the Program, the only way you could satisfy both those terms and this License would be to refrain entirely from conveying the Program.

13. Use with the GNU Affero General Public License.

Notwithstanding any other provision of this License, you have permission to link or combine any covered work with a work licensed under version 3 of the GNU Affero General Public License into a single combined work, and to convey the resulting work. The terms of this License will continue to apply to the part which is the covered work, but the special requirements of the GNU Affero General Public License, section 13, concerning interaction through a network will apply to the combination as such.

14. Revised Versions of this License.

The Free Software Foundation may publish revised and/or new versions of the GNU General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies that a certain numbered version of the GNU General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that numbered version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of the GNU General Public License, you may choose any version ever published by the Free Software Foundation.

If the Program specifies that a proxy can decide which future versions of the GNU General Public License can be used, that proxy's public statement of acceptance of a version permanently authorizes you to choose that version for the Program.

Later license versions may give you additional or different permissions. However, no additional obligations are imposed on any author or copyright holder as a result of your choosing to follow a later version.

15. Disclaimer of Warranty.

THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR

PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. Limitation of Liability.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MODIFIES AND/OR CONVEYS THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

17. Interpretation of Sections 15 and 16.

If the disclaimer of warranty and limitation of liability provided above cannot be given local legal effect according to their terms, reviewing courts shall apply local law that most closely approximates an absolute waiver of all civil liability in connection with the Program, unless a warranty or assumption of liability accompanies a copy of the Program in return for a fee.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively state the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>
Copyright (C) by Bruce Korb - all rights reserved

This program is free software: you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation, either version 3 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of

MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program. If not, see <http://www.gnu.org/licenses/>.

Also add information on how to contact you by electronic and paper mail.

If the program does terminal interaction, make it output a short notice like this when it starts in an interactive mode:

```
<program> Copyright (C) by Bruce Korb - all rights reserved
This program comes with ABSOLUTELY NO WARRANTY; for details type `show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type `show c' for details.
```

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, your program's commands might be different; for a GUI interface, you would use an "about box".

You should also get your employer (if you work as a programmer) or school, if any, to sign a "copyright disclaimer" for the program, if necessary. For more information on this, and how to apply and follow the GNU GPL, see <http://www.gnu.org/licenses/>.

The GNU General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Lesser General Public License instead of this License. But first, please read <http://www.gnu.org/philosophy/why-not-lgpl.html>. Libevent is available for use under the following license, commonly known as the 3-clause (or "modified") BSD license:

```

Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.

59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.

b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

- a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
- c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY

TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

One line to give the program's name and a brief idea of what it does.

Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'. This is free software, and you are welcome to redistribute it under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program `Gnomovision' (which makes passes at compilers) written by James Hacker.

signature of Ty Coon, 1 April 1989

Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

1.29 SHA-1 ARM NA

1.29.1 Available under license :

 */
```

Note that the only valid version of the GPL as far as this project is concerned is `_this_` particular version of the license (ie v2, not v2.2 or v3.x or whatever), unless explicitly otherwise stated.

HOWEVER, in order to allow a migration to GPLv3 if that seems like a good idea, I also ask that people involved with the project make their preferences known. In particular, if you trust me to make that decision, you might note so in your copyright message, ie something like

This file is licensed under the GPL v2, or a later version at the discretion of Linus.

might avoid issues. But we can also just decide to synchronize and contact all copyright holders on record if/when the occasion arises.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

GNU GENERAL PUBLIC LICENSE
TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.

c) If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is

allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues),

conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of

this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

<one line to give the program's name and a brief idea of what it does.>

Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 59 Temple Place, Suite 330, Boston, MA 02111-1307 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

```
Gnomovision version 69, Copyright (C) year name of author
Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type 'show w'.
This is free software, and you are welcome to redistribute it
under certain conditions; type 'show c' for details.
```

The hypothetical commands 'show w' and 'show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than 'show w' and 'show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

```
Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.
```

```
<signature of Ty Coon>, 1 April 1989
Ty Coon, President of Vice
```

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

This package was downloaded from ftp.kernel.org/pub/software/scm/git/.

Upstream Author: Linus Torvalds and many others

On Debian GNU/Linux systems, the complete text of the GNU General Public License can be found in '/usr/share/common-licenses/GPL'.

1.30 shttpd 1.36

1.30.1 Available under license :

"THE BEER-WARE LICENSE" (Revision 42):

Sergey Lyubka wrote this software. As long as you retain this notice you can do whatever you want with this stuff. If we meet some day, and you think this stuff is worth it, you can buy me a beer in return.

1.31 Tiny XML 2.6.1

1.31.1 Available under license :

TinyXML is released under the zlib license:

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not claim that you wrote the original software. If you use this

software in a product, an acknowledgment in the product documentation would be appreciated but is not required.

2. Altered source versions must be plainly marked as such, and must not be misrepresented as being the original software.

3. This notice may not be removed or altered from any source distribution.

1.32 zlib 1.2.3

1.32.1 Available under license :

version 1.2.3, July 18th, 2005

Copyright (C) 1995-2005 Jean-loup Gailly and Mark Adler

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages arising from the use of this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:
