

Cisco Sustainability Priority Assessment

Accelerate your sustainability journey

Design sustainability at the core

Technology has the potential to reduce greenhouse gas emissions. Some estimates say it could reduce global emissions by 15 percent across industries by 2030,¹ improve energy efficiency, and enable smarter and more sustainable workspaces for the future.

You need to zero in on your sustainability strategy. An effective approach requires a roadmap that allows for flexibility and provides a clear understanding of your desired business outcomes.

Kickstart your sustainability journey by minimizing risks and creating a reliable, high-performance strategies that can help you:

- **Design a Sustainability Transformation Roadmap** with prioritized strategic initiatives aligned to your vision, timescales, and available capacity
- **Identify key initiatives**, risks, and dependencies
- **Provide mapping of the priorities** aligned to IT relevant use cases
- **Measure your current maturity** and define a potential future state for relevant capabilities and technologies

With Cisco® CX on your side, we can help you accelerate and deliver on your sustainability requirements.

Outcomes

- **Identify and prioritize your sustainability goals** for a greener future
- **Reduce emissions** to contribute to a cleaner and more sustainable environment
- **Identify capability gaps** to proactively strengthen your sustainability initiatives
- **Improve resource efficiency** to reduce environmental impact

Cisco Sustainability Priority Assessment

Cisco Sustainability Priority Assessment helps analyze and bridge capabilities gaps and build an executable roadmap. By working closely with your business and IT leaders, our Cisco CX architects will help you:

Address strategic imperatives and identify relevant KPIs centered on your business outcomes

Conduct a capability maturity assessment based on identified use cases

Develop an executable roadmap with clear risks and dependencies

Sustainability can play a transformational role across the business, environment, and markets. As trusted advisors with global expertise and cross-domain technical skills, we work to design a sustainability plan for how technology can support your sustainability journey and meet your unique business needs. Our Sustainability Priority Assessment is designed to help you extract more value from your technology investments while reducing costs and accelerating innovation.

Transform experiences powered for the future

To achieve sustainability, organizations need an informed strategy with engaged employees and leadership. And for every organization, choosing the best approach requires a different balancing act and can have its challenges.

- **Uncertainty about how to design an architectural approach** with sustainability in mind that accounts for economic, environmental, social, and governmental factors to align with strategic and operational decisions.
- **The need to define sustainability use cases** for accelerating your company's sustainability journey.
- **The need to increase resilience** to the environmental impacts from climate change.

By assessing the gap between current and future capabilities of your sustainability priorities and business goals, we can help shape your journey for a low-carbon transformation and accelerate your ability to achieve emissions reduction.
