Glossary

Timesaver

Go to terms that start with... [[A](#) | [D](#)].

A

AAI *Appliance Administration Interface.* Console application (text-based; menu-driven) and command shell on all Cisco DMM appliances. Administrators use AAI to set up and connect a new DMM appliance and maintain it thereafter. Although its scope is far narrower than [DMS-Admin](#), AAI supports privileged operations that DMS-Admin does not support.

D

[Return to Top](#)

DMS-Admin *Digital Media Suite Administration.* Web-based graphical user interface on a DMM appliance. Administrators use DMS-Admin to:

- Activate and monitor features throughout the full range of Cisco DMS products.
- Exchange information with network entities outside Cisco DMS.
- Centrally manage user accounts for Cisco DMS products.

Compare to [AAI](#).

Logical Ports That Cisco DMS Components Use

Make sure to keep these logical ports open to traffic exchanged among Cisco DMS components.

Port No.	From	To	Bidir?	Protocol	Description
20	DMM	DMP	N	FTP	DMM server deploying content to DMP using FTP

Procedures

- [Learn Your DMM Appliance Serial Number, page 1-6](#)
- [Start DMS-Admin, page 1-5](#)

Log in to DMM

Procedure

Step 1 Point your browser at your DMM appliance.

- Use **HTTPS** and specify port **8443**

OR

Use **HTTP** and specify port **8080**—*which redirects immediately to the secured HTTPS connection.*

- Be sure to use the fully qualified appliance DNS name and not merely its IP address. For example, **https://dmm.example.com:8443**.

Step 2 When the login page loads, sign in to your account.

Step 3 Click **Log In**.

The DMM landing page loads in your browser.

Step 4 Stop. You have completed this procedure.

What to Do Next

-

Start DMS-Admin

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration** on the landing page.

What happens next depends on what happened before.

- *Is your appliance factory-new or recently restored?* **No licenses are installed.**
We take you first to the page where you can install a license key.
- *Have you activated even one licensed feature?* **At least one license is installed.**
We take you first to the DMS-Admin Dashboard, whose gauges can inform you at a glance.

Step 2 Stop. You have completed this procedure.

Related Topics

- [Log in to DMM, page 1-4](#)

Learn Your DMM Appliance Serial Number

**Caution**

You cannot obtain any Cisco DMS software feature licenses until you know your DMM appliance serial number.

Before You Begin

- Log in to DMM and click **Administration**.

Procedure

- Step 1** Find the System Information gauge on your Administration dashboard.

System Information	
Digital Media Manager	Version 5.4.0
Appliance Serial Number	XXXXXXXXXX
Disk Space	DMM
	Used 0.17 GB
	Free 27.33 GB

- Step 2** Make note of your appliance serial number.

- Step 3** Stop. You have completed this procedure.

Set a User Session Timeout for Components of Cisco DMS

We log inactive users out of their sessions automatically after an interval, **which you control**, has elapsed. This interval applies to all users without exception.

Before You Begin

- Log in to DMM and click **Administration**.

Procedure

- Step 1** Choose **Security > Session**.

Session

Configure Session Parameters
To configure the session timeout, modify the value, and click **Update**

Session Timeout (in minutes):

Update **Cancel**

- Step 2** Use the Session Timeout (in minutes) field to enter or edit a session timeout value.

- Step 3** Click **Update**.
- Step 4** Stop. You have completed this procedure.
-

Reference

- [FAQs and Troubleshooting, page 1-7](#)

FAQs and Troubleshooting

- [FAQs, page 1-7](#)

FAQs

- Q.** What might prevent me from logging in?
- A.** Check the following, and then try again to log in.
- Is your username wrong or mistyped?
 - Is your password wrong, mistyped, or expired?
 - Is your user account suspended?
 - Is your user account locked after too many failed login attempts?

Administration Dashboard

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 2-1](#)
- [Procedures, page 2-5](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will administer Cisco DMS.
 - ✓ You have already installed at least the license key to activate one Cisco DMS software feature module.
-

Concepts

- [Dashboard Overview, page 2-1](#)

Dashboard Overview

The dashboard for DMS-Admin centralizes many features for system monitoring and log collection. When problems of any kind interfere with the data-collection processes that populate its gauges, they show question marks in addition to the best available data. In this case, check that your systems and network are configured and working correctly.

These are the dashboard gauges.

The screenshot shows the Cisco Digital Media Manager Administration Dashboard. The top navigation bar includes links for Home, My Profile, Sign Out, and Help. The main navigation menu includes Administration, Dashboard, Failover, Settings, Security, Users, Alerts, Services, and Licenses. The dashboard is divided into several sections:

- Alerts:** Shows 0 Email Notifications, 0 SNMP Notifications, and 0 Syslog Notifications. A link to [View Alerts >](#) is provided.
- System Information:** Displays Digital Media Manager Version 5.4.0, Appliance Serial Number (redacted), and Disk Space (DMM, Used 0.17 GB, Free 27.33 GB).
- Users Logged In:** Shows 1 Users Logged In (Past One Hour). A link to [View All Users >](#) is provided.
- Status:** Includes Digital Media Players (DMPs: 2, Up: 1, Down: 1) and Failover Cluster (DMM Cluster, Not Clustered). Links to [View All DMPs and DMP Groups >](#) and [View Failover Status >](#) are provided.
- License Features:** A table listing various modules and their license constraints.

License Features	
Digital Media Manager Base License	No constraints on license
SNMP Notifications Module	No constraints on license
Proof of Play Module	No constraints on license
Cast Module	No constraints on license
Digital Media Player Pack	Limit: 5000 elements
Digital Media Designer Module	No constraints on license
High Availability Failover Module	No constraints on license
-	-
-	-
-	-

The Failover Cluster gauge monitors your use, if any, of failover.

Note

Sometimes, a monitoring gauge might leave out a value that you expect it to show. When this occurs, we mark any missing values with a placeholder symbol (⚠️) to indicate which values we could not show.

Tip

Until you install at least one license key, the DMS-Admin dashboard cannot retrieve data to populate its gauges.

Understand the Alerts Gauge

This gauge shows the total count of notification messages delivered in the past 1 hour.

The screenshot shows the Alerts gauge with the following data:

- 0 Email Notifications
- 0 SNMP Notifications
- 0 Syslog Notifications

A link to [View Alerts >](#) is provided at the bottom of the gauge.

Timesaver

Click **View Alerts** to open the Alerts page.

Understand the System Information Gauge

The System Information gauge:

- Tells you the installed release version of your DMM server software.
- Tells you the serial number of your DMM appliance.
- Measures free space and used space for the content partition on your DMM appliance hard drive.

Understand the Status Gauge

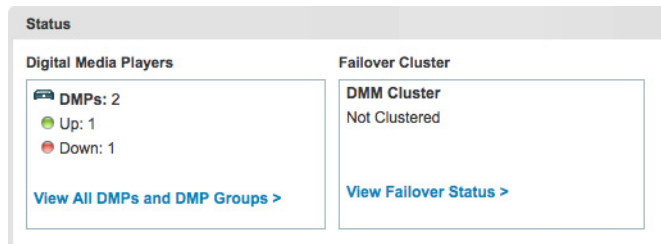

Tip

Refresh your browser to update the data that this gauge shows.

Have you set up the hardware and activated the separately licensed software features for DMM server failover and your inventory of DMPs?

If so, this gauge summarizes their current state in two summaries, side-by-side.

Digital Media Players

- Counts the total number of registered DMPs.
- Specifies how many DMPs were reachable or unreachable when this gauge loaded in your browser.

Failover Cluster

- Indicates the status of Cisco DMM appliances in your failover cluster.

Timesaver

Click...

- **View All DMPs and DMP Groups** to open the DMP Manager page.
- **View Failover Status** to open the Failover Configuration page.

Understand the Licensed Features Gauge

This gauge lists software feature module licenses that are installed on your DMM appliance and describes constraints that your licenses impose.

License Features	
Digital Media Manager Base License	No constraints on license
SNMP Notifications Module	No constraints on license
Proof of Play Module	No constraints on license
Cast Module	No constraints on license
Digital Media Player Pack	Limit: 5000 elements
Digital Media Designer Module	No constraints on license
High Availability Failover Module	No constraints on license
-	-
-	-
-	-

Understand the Users Logged In Gauge

This gauge counts how many users were logged in to your Cisco DMM appliance over the past 1 hour.

Users Logged In
 1 Users Logged In (Past One Hour)
View All Users >

Timesaver

Click **View All Users** to open the Users page.

Procedures

- [View Dashboard Gauges, page 2-5](#)

View Dashboard Gauges

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Click the **Dashboard** tab.

Step 3 Stop. You have completed this procedure.

Licenses

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 3-1](#)
- [Procedures, page 3-2](#)
- [Reference, page 3-6](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will administer Cisco DMS.
 - ✓ You have already purchased the license key to activate at least one Cisco DMS software feature module.
-

Concepts

- [Understand Licenses, page 3-1](#)

Understand Licenses

Features of Cisco DMS are licensed and activated separately. Until you obtain and install license keys, their corresponding features are hidden from all users—including you, the administrator.

Note

Even then, some features remain hidden from users whose privilege levels are low.

What to Do Next

- **OPTIONAL**—*Would you like to learn which feature licenses we sell?*
See <http://www.cisco.com/go/dms>.
- **MANDATORY**—*Would you like to obtain license keys?*
See the “[Request License Keys](#)” section on page 3-2.
- **MANDATORY**—*Would you like to install feature licenses?*
See the “[Install License Keys](#)” section on page 3-4.

Procedures

- [Request License Keys, page 3-2](#)
- [Install License Keys, page 3-4](#)
- [View Installed Licenses, page 3-5](#)
- [Check the Dashboard Gauge for Licenses, page 3-5](#)

Request License Keys

Features of Cisco DMS are sold and licensed separately. After you purchase the right to use a feature, you must request and install a unique license key. Your key activates the feature on your server.

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Licenses > Request Licenses**.

Step 3 Enter all requested values in the Request Licenses form.

Request Licenses

Features of Cisco DMS are sold and licensed separately. After you purchase the right to use a feature, you must request and install a unique license key. Your key activates the feature on your server.

DMM Appliance Serial Number:

Version:

Company Name:

Department:

Contact:

When entering the Cisco Sales Order Number for your DMS system, use numerals only. A valid sales order number contains exactly 8 numerals, e.g. 28876739

Cisco Sales Order Number *:

Issuer Remarks:

Features to License:

- Digital Media Designer
- Cast
- High Availability Failover

This email will be the recipient of the License file. Your email address will not be used for any other purpose other than communications regarding your licensing of DMS.

Your Email *:

Export, and save a local copy of the generated request (Later, email that file to dms-softwarekeys@cisco.com with the subject **DMM License Request**)

Send your request now, automatically. (Your DMM appliance must have a working internet connection and SMTP enabled.)

Cisco will send your license keys to you via the email address you entered above, usually within 24 hours. When you receive your license keys, return to the Licenses tab and then click **Install/Upgrade Licenses**. From there, you can activate your newly licensed features.

Step 4 Choose a method to send your license request as an email message to dms-softwarekeys@cisco.com.

- Export your request to a file that you can email later.
- Send your request immediately, assuming that your DMM server is configured to enable SMTP.

Step 5 After you receive a license key file from Cisco, save a local copy of it.

Note **Make sure that your local copy does not include any spaces in its filename.** (CSCtj60727)

Step 6 Stop. You have completed this procedure.

What to Do Next

- **MANDATORY**—[Install License Keys, page 3-4](#)

Related Topics

- [Learn Your DMM Appliance Serial Number, page 1-6](#)
- [View Installed Licenses, page 3-5](#)

Install License Keys

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Licenses > Install/Upgrade Licenses**.

Step 3 Click **Browse** or **Choose File**, depending on your installed browser.

Step 4 Find and click the license file where you saved it.

Step 5 Click **Open**.

Step 6 Click **Install License**.

Step 7 Repeat these steps until all of your licenses are installed.

Features that you licensed are now activated.

Step 8 Stop. You have completed this procedure.

Related Topics

- [Start DMS-Admin, page 1-5](#)
- [View Installed Licenses, page 3-5](#)

View Installed Licenses

Before You Begin

- Install at least one license key.
- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Licenses > View Licenses**.

Step 3 Stop. You have completed this procedure.

Tip

The **Licensed Features gauge** summarizes this information on your **DMS-Admin dashboard**.

Related Topics

- [Start DMS-Admin, page 1-5](#)

Check the Dashboard Gauge for Licenses

Before You Begin

- Install at least one license key.
- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Click **Dashboard**.

Step 3 Check the Licensed Features gauge on your dashboard.

It tells you which of your:

- Licensed features are activated.
- Feature licenses impose restrictions.

Step 4 Stop. You have completed this procedure.

Reference

- [Automatically Licensed Features on Cisco DMS Appliances and Endpoints, page 3-6](#)
- [Optional Module Licenses, page 3-7](#)

Automatically Licensed Features on Cisco DMS Appliances and Endpoints

We license many fundamental features at no additional cost with your purchase of any Cisco DMM appliance or DMP endpoint. These licenses are unit-specific and *perpetual*, in the sense that you can always use the provided software version on the same equipment where we preinstalled it. We do not impose any subscription fees or non-support fees for this software and do not obligate you to purchase other licenses.

DMM appliance

With the automatically licensed features of a DMM appliance, you can:

- Install any separately purchased feature licenses.
- Gain access to features after you license them.
- Create user accounts and user groups.
- Configure a user authentication framework.
- Configure event notifications and alarms.
- Check processes remotely.
- Monitor and restart servers remotely.

DMP endpoint

With a DMP endpoint base license, you can set up the DMP itself¹ from its embedded device manager, *DMPDM*.

1. Managed in isolation, without involving DMM or any other DMPs.

Optional Module Licenses

Note To obtain and activate any license for any component of Cisco DMS, you must have a DMM appliance.

Module or Pack		Part Number ¹	Description									
DMS-Admin Features	SNMP Notifications	<ul style="list-style-type: none"> • DMM-SNMP52-K9 • <i>DMM-SNMP52-K9=</i> 	Activates support for SNMP interaction with network monitoring applications. Also activates support for event notifications and alerts.

Server Operations

Revised: May 4, 2015
OL-15762-05

- [Procedures, page 4-1](#)
- [Reference, page 4-4](#)

We prepared this material with specific expectations of you.

- ✓ You administer Cisco DMS.

Procedures

- [Check DMM Server Processes Remotely, page 4-1](#)
- [Restart Appliances Remotely, page 4-3](#)

Check DMM Server Processes Remotely

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Click **Services**.

Step 3 Click **DMM Server** in the far-left column.

A list tells you which processes are running or stopped.

Application	Name ^	Status	Hardware
DMM System	Active MQ	running	DMM Server
Cast Module	Cast Admin Web Application	running	DMM Server
Cast Module	Cast EPG Collector Web Application	running	DMM Server
Cast Module	Cast Flash Web Application	running	DMM Server
Cast Module	Cast Remote Control Web Application	running	DMM Server
DMS Admin	DMS Admin Web Application	running	DMM Server
Digital Signs Module	DSM Web Application	running	DMM Server
DMM System	Event Management System	running	DMM Server
DMS-CD	IFMS Web Application	running	DMM Server
DMM System	Nginx HTTP Server	running	DMM Server
DMM System	OpenAM Web Application	running	DMM Server
DMM System	Postgresql	running	DMM Server
DMM System	Scheduled backup services	running	DMM Server
DMM System	Solr Advanced Search Core	running	DMM Server
DMM System	Solr Tagging Service Core	running	DMM Server
DMM System	Tomcat	running	DMM Server

Options ▾

Note Any process whose name includes the phrase “Web Application” is actually a child of the Tomcat process.

You can restart the Tomcat process in AAI and simultaneously restart all of its children. The path to do this in AAI is APPLIANCE_CONTROL > RESTART_OPTIONS > RESTART_WEB_SERVICES.

Similarly, you can restart Postgresql in AAI by choosing APPLIANCE_CONTROL > RESTART_OPTIONS > RESTART_DATABASE_SERVICES.

Step 4 Stop. You have completed this procedure.

Restart Appliances Remotely

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Click **Services**.

Step 3 Click a server in the far-left column.

Step 4 Choose **Options > Restart Server**.

Step 5 Stop. You have completed this procedure.

Reference

- [Server Processes, page 4-4](#)

Analyze Cisco DMS System Logs

Revised: May 4, 2015
OL-15762-05

- [Procedures, page 5-1](#)

We prepared this material with specific expectations of you.

- ✓ You have a working syslog server and you understand its operation.

Procedures

- [Enable Syslog Analysis, page 5-1](#)
- [Disable Syslog Analysis, page 5-2](#)

Enable Syslog Analysis

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Settings > External Servers > Syslog**.

Step 3 Click **Enabled**.

Step 4 Enter the routable IP address or DNS-resolvable hostname of your syslog server.

- Step 5** Enter the logical port number where your syslog server accepts incoming logfiles.
The standard port number, **514**, is prepopulated for your convenience.
- Step 6** Click **Save**.
- Step 7** Stop. You have completed this procedure.
-

Disable Syslog Analysis

Before You Begin

- Log in to DMM.
- Enable syslog.

Procedure

- Step 1** Click **Administration**.

- Step 2** Choose **Settings > External Servers > Syslog**.
- Step 3** Click **Disabled**.
- Step 4** Click **Save**.
- Step 5** Stop. You have completed this procedure.
-

- [Restrictions, page 7-2](#)

Overview

A streaming media framework called *RTP over RTSP* makes it possible for DMPs to play streaming video on demand through RTSP connections. This framework prevents data loss inside streams and maintains proper synchronization of audio to video, even in high-definition.

You must maintain two data files for each VoD that you will stream in this way.

- An MPEG2-TS source file, which uses the filename extension **MPG**. Its program stream might be encoded as MPEG-1, MPEG-2, or MPEG-4 Part 10 (H.264).
- A “hinted” **MOV** file, which is derived from your MPG source file and imposes order upon it.

You must use our *Cisco Hinter* utility to output each hinted MOV file.

Cisco Hinter prepares MPEG2-TS files for interleaved RTP transmission through open source software called *Darwin Streaming Server (DSS)*. Hinter adds delivery information to a media track, which tells DSS how to pack and stream (*multiplex*, or *mux*) data from the audio channel and the video channel. This method improves audiovisual synchronization because these channels traverse the network together. Your DSS can then deliver such hinted video to your DMPs upon demand, after you stage the MPG-MOV pair to its media serving directory.

Cisco Hiner versions for Windows and Linux users are downloadable from your DMM appliance.

Note

We do not develop, maintain, sell, or support Darwin Streaming Server. Nor do we warrant its suitability for any purpose.

Workflow

1. Download and set up Cisco Hiner.
2. Download Darwin Streaming Server (DSS).

Note

The official repository for DSS is <http://dss.macforge.org>. Alternatively, you can use <http://developer.apple.com/opensource/server/streaming/index.html>.

3. Install and configure DSS on **equipment other than any Cisco DMS server appliance**.
4. Process each of your MPG files with Cisco Hiner to output a small, hinted MOV file.
5. Stage your MPG and MOV files together in the DSS serving directory.
6. Request streams from **rtsp://<DSS_IP_address>:<optional_port_number>/<filename>.mov**.

In DMPDM

- a. Enter your stream's address in the URL field at Display Actions > Media URL.
- b. Click **Start**.

In Digital Signs

- a. Click the URL (recommended) radio button on the Simple property sheet in the Add Asset dialog box.
- b. Enter your stream's address in the URL field.
- c. Choose **RTSP** from the File Type list.
- d. Click **Save**.

Restrictions

RTSP Variants

- There are many variants of RTSP and **we support only one of them**. You must use *RTP over RTSP*, which is also called *RTP over TCP* or *Interleaved TCP*. In this variant, RTP, RTCP, and RTSP data stream together over one logical port—typically, port 554.
- Our RTSP does not support live streaming (multicast or unicast) in this release.
- Our RTSP does not support “trick mode.” This means that you cannot pause video during playback, fast-forward through it, or fast-rewind through it. You can merely start or stop playback.

Darwin Streaming Server

- DSS cannot read any file whose file size is greater than 2.1 GB. You must split such large files into smaller ones before you derive hinted MOV output from them. (CSCtb27324)
- Although DSS is an open source streaming media platform and available for multiple operating systems, **we have tested DSS on Linux exclusively**.

Cisco Hinder

- *Cisco Hinder* software is available for Windows and Linux, exclusively.
- We do not support any other hinder.
- We do not support playback of hinted files that you output from any other hinder.

Protocols

- We do not support *User Datagram Protocol* (UDP).
- We do not support *Session Announcement Protocol* (SAP).
- We do not support *Session Description Protocol* (SDP) or its announcements.

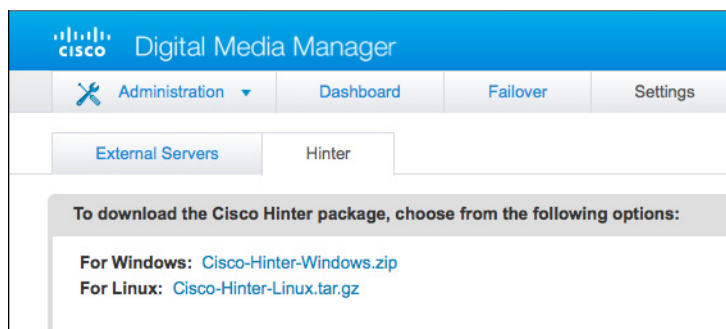

Procedures

- [Download Cisco Hinder, page 7-3](#)
- [Windows, page 7-4](#)
- [Linux, page 7-5](#)

Download Cisco Hinder

Before You Begin

- Log in to DMM.

Procedure**Step 1** Click **Administration**.**Step 2** Choose **Settings > Hinder**.**Step 3** Click to download either the Windows or the Linux version.

- **Cisco-Hinter-Windows.zip**
- **Cisco-Hinter-Linux.tar.gz**

- Step 4** Decompress the archive.
- Step 5** Stop. You have completed this procedure.
-

Windows

- [Install Cisco Hinter on Windows, page 7-4](#)
- [Run Cisco Hinter on Windows, page 7-4](#)

Install Cisco Hinter on Windows

Procedure

- Step 1** Open a command prompt where you decompressed the archive.
- Step 2** Type the command **cd CiscoHinter**, and then press **Enter**.
- Step 3** Type the command **install.bat**, and then press **Enter**.
- Step 4** Stop. You have completed this procedure.
-

Run Cisco Hinter on Windows

Procedure

- Step 1** Open a command prompt where you decompressed the archive.
- Step 2** Type the command **runHinter.bat**, and then press **Enter**.
- Step 3** Enter the MPEG2-TS filename in the Source MPEG field.

OR

Click **Browse** or **Choose File** (depending on which browser you use) to find your MPEG2-TS file.

We populate the Output Name field automatically. It is identical to the name in the Source MPEG field, except that the filename extension is MOV and not MPG.

- Step 4** Click **Generate**, and then wait for the “Hinting finished successfully” message.
- Step 5** Find your hinted MOV output file in the **..hinted-files** subdirectory.
- Step 6** Move or copy both the MPG file and its MOV derivative to the DSS root directory.
- Step 7** Stop. You have completed this procedure.
-

Linux

- [Install Cisco Hiner on Linux, page 7-5](#)
- [Run Cisco Hiner on Linux, page 7-5](#)

Install Cisco Hiner on Linux

Procedure

- Step 1** Open a command prompt where you decompressed the archive.
- Step 2** Type the command **run Install.sh**, and then press **Enter**.
- Step 3** Stop. You have completed this procedure.
-

Run Cisco Hiner on Linux

Procedure

- Step 1** Open a command prompt where you decompressed the archive.
- Step 2** Type the command **run runHiner.sh**, and then press **Enter**.
- Step 3** Enter the MPEG2-TS filename in the Source MPEG field.

OR

Click **Browse** or **Choose File** (depending on your browser) to find your MPEG2-TS file.

We populate the Output Name field automatically. It is identical to the name in the Source MPEG field except that the filename extension is MOV and not MPG.

- Step 4** Click **Generate**, and then wait for the “Hinting finished successfully” message.
- Step 5** Find your hinted MOV output file in the **../hinted-files** subdirectory.
- Step 6** Move or copy both the MPG file and its MOV derivative to the DSS root directory.
- Step 7** Stop. You have completed this procedure.
-

Reference

- [FAQs and Troubleshooting](#), page 7-6

FAQs and Troubleshooting

- [Troubleshoot RTP Over RTSP](#), page 7-6

Troubleshoot RTP Over RTSP

These general troubleshooting ideas might help you to diagnose and resolve problems with this feature.

- Verify that both the MPG source file and its hinted MOV derivative are present together in the media root directory on your DSS.
- Use a utility like `openRTSP` to test both the MPG source file and its hinted MOV derivative. The correct Linux command line syntax in this case is **`openRTSP -V -v -t rtsp://DSS_server_IP_address/filename.mov`**
- Use **HexEdit**, **WinHex**, or a similar utility to open your hinted MOV file and verify that it contains:
 - An explicit reference to the full and literal filename of your MPG source.
 - The signature for MOV output from Cisco Hinter:
Hinted MPEG1 Muxed Track
 - The signature for interleaved RTP:
m=OTHER 0 RTP/AVP 96
- Check the system logs on your DSS.

Note

- **openRTSP**—<http://www.live555.com/openRTSP/>
- **HexEdit**—<http://hexedit.sourceforge.net/>
- **WinHex**—<http://www.winhex.com/winhex/>

Authentication and Federated Identity

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 8-1](#)
- [Procedures, page 8-21](#)
- [Reference, page 8-45](#)

Audience

We prepared this material with specific expectations of you.

- ✓ Embedded Mode—You understand fundamental principles of user authentication.
- ✓ LDAP Mode—you are a Microsoft [Active Directory](#) expert with real-world experience in its configuration and administration.
- ✓ Federation Mode—you are a [SAML 2.0](#) expert with real-world experience in its configuration and administration, including import and export of [SAML 2.0-compliant IdP](#) and [SP](#) configuration files.

Concepts

- [Overview, page 8-1](#)
- [Glossary, page 8-2](#)
- [Understand the Requirement to Authenticate Users, page 8-9](#)
- [Decide Which Authentication Method to Use, page 8-10](#)
- [LDAP and Active Directory Concepts, page 8-10](#)
- [Federated Identity and Single Sign-on \(SSO\) Concepts, page 8-17](#)
- [Migration Between Authentication Methods, page 8-20](#)

Overview

User authentication features of DMS-Admin help you to:

- Authenticate **all** user sessions. (*We prevent you from disabling mandatory authentication, even though we allowed this in Cisco DMS 5.1.x and prior releases.*)
- Choose and configure an authentication method.
- Import user account settings from an [Active Directory](#) server.

- Synchronize user groups from an [Active Directory](#) server. Microsoft Active Directory is the only LDAP implementation that we support in this release.
- Use [federation](#) services with a [SAML 2.0-compliant IdP](#) to support [SP](#)-initiated “single sign-on” login authentication in your network (following an initial synchronization to a Microsoft Active Directory Server that populates the DMM user database).

**Note**

We support your use of one—and only one—[IdP](#) server with Cisco DMS 5.4.

Glossary

**Timesaver**

Go to terms that start with... [[A](#) | [C](#) | [D](#) | [F](#) | [I](#) | [L](#) | [O](#) | [P](#) | [R](#) | [S](#) | [U](#) | [X](#)].

A

Active Directory

Microsoft implementation of [LDAP](#). A central authentication server and user store. Active Directory is the only LDAP implementation that we support in this release.

Active Directory forest

A domain-straddling combination of [Active Directory trees](#) within an organization that operates multiple Internet domains. Thus, the forest at “Amalgamated Examples, LLC” might straddle all trees across [example.com](#), [example.net](#), and [example.org](#).

Or, to use Cisco as a real-world case-study, one forest could straddle [cisco.com](#) and [webex.com](#), among others.

Note This Cisco DMS release does not support Active Directory forests.

Active Directory tree

A subdomain-straddling combination of [IdPs](#) throughout one Internet domain. These IdPs operate collectively on behalf of the Internet domain’s constituent subdomains. Thus, the “tree” at [example.com](#) might encompass all of the [IdPs](#) to authenticate user sessions within subdomains such as these:

- [legal.example.com](#)
- [sales.example.com](#)
- [support.example.com](#)

administrator DN The [DN](#) to authenticate your [Active Directory](#) server's administrator.

Note This release is more strict than most prior releases in its enforcement of proper [LDAP](#) syntax. Now, when you specify the administrator [DN](#), **you must use proper syntax, which conforms exactly to [LDIF](#) grammar.**

- Proper syntax: `CN=admin1,OU=Administrators,DC=example,DC=com`
- Poor syntax: `EXAMPLE\admin1`

OTHERWISE

When you use poor syntax here for the first time while your DMM appliance runs DMS 5.3, we show you, the administrator, this error message: “Invalid username or password.”

But if you used and validated poor syntax here before *upgrading* to Cisco DMS 5.3, we do not repeat the validation process. Therefore—*even though we do not show an error message to anyone*—**LDAP users simply cannot log in.**

Note **An LDAP expression must never include a space immediately to either side of a “=” sign.** Similarly, it must never include a space immediately to either side of an “objectClass” attribute. Otherwise, validation fails.

authentication The process to verify if a [directory service entity](#) has correctly claimed its own identity.

C [↑ Return to Top](#)

CA *certification authority.* Authority that issues and manages security credentials and public keys, which any [directory service entity](#) relies upon to encrypt and decrypt messages exchanged with any other [directory service entity](#). As part of a public key infrastructure (PKI), a CA checks with a registration authority (RA) to verify information that certificate requestors provide. After the RA verifies requestor information, the CA can then issue a certificate.

CN *common name.* An attribute-value pair that names one [directory service entity](#) but indicates nothing about its context or position in a hierarchy. For example, you might see `cn=administrator`. But `cn=administrator` is so commonplace in theory that it might possibly recur many times in an [Active Directory forest](#), while referring to more than just one [directory service entity](#). An absence of context means that you cannot know which device, site, realm, user group, or other entity type requires the implied “administration” or understand why such “administration” should occur.

Therefore, use of a standalone CN is limited in the [LDIF](#) grammar. Absent any context, a standalone CN is only ever useful as an [RDN](#).

Note **An LDAP expression must never include a space immediately to either side of a “=” sign.** Similarly, it must never include a space immediately to either side of an “objectClass” attribute. Otherwise, validation fails.

CoT *circle of trust.* The various [SP](#) that all authenticate against one [IdP](#) in common.

D [↑ Return to Top](#)

DC *domain component*. An attribute to designate one constituent part of a *fully-qualified domain name* (FQDN). Suppose for example that you manage a server whose FQDN is **americas.example.com**. In this case, you would link together three DC attribute-value pairs: **DC=Americas, DC=example, dc=com**.

Note **An LDAP expression must never include a space immediately to either side of a “=” sign.** Similarly, it must never include a space immediately to either side of an “objectClass” attribute. Otherwise, validation fails.

digital certificate Uniquely encrypted digital representation of one [directory service entity](#), whether physical or logical. This trustworthy representation certifies that the entity is not an imposter when it sends or receives data through a secured channel. The [CA](#) normally issues the certificate upon request by the entity or its representative. The requestor is then held accountable as the “certificate holder.” To establish and retain credibility, a certificate must conform to requirements set forth in International Organization for Standardization (ISO) standard X.509. Most commonly, a digital certificate includes the following.

- One [DN](#) to authenticate the [directory service entity](#).
- One [DN](#) to authenticate the [CA](#).
- A serial number to identify the digital certificate itself.
- An expiration date, after which any entity that receives the certificate should reject it.
- A copy of the certificate holder’s public key.
- The [CA](#)’s digital signature, so recipients can verify that the certificate is not forged.

directory service entity

Any single, named unit at any level within a nested hierarchy of named units, relative to a network. An entity's essence depends upon its context. This context, in turn, depends upon interactions between at least two service providers—one apiece for the naming service and the directory service—in your network. Theoretically, an entity might represent any tangible thing or logical construct.

- By “tangible thing,” we mean something that a person could touch, which occupies real space in the physical world. For example, this entity type might represent one distinct human being, device, or building.
- By “logical construct,” we mean a useful abstraction whose existence is assumed or agreed upon but is not literally physical. For example, this entity type might represent one distinct language, subnet, protocol, time zone, or ACL.

An entity's purpose is broad and flexible within the hierarchical context that defines it.

DN

distinguished name. A sequence of attributes that help a **CA** to distinguish a particular **directory service entity** uniquely for authentication. Distinct identity in this case arises from a text string of comma-delimited attribute-value pairs. Each attribute-value pair conveys one informational detail about the entity or its context. The comma-delimited string *is* the actual DN. It consists of the entity's own **CN**, followed by at least one **OU**, and then concludes with at least one **DC**. For example:

```
CN=username,OU=California,OU=west,OU=sales,DC=Americas,DC=example,DC=com
```

Note An LDAP expression must never include a space immediately to either side of a “=” sign. Similarly, it must never include a space immediately to either side of an “objectClass” attribute. Otherwise, validation fails.

Thus, each DN represents more than merely one isolated element. A DN also associates the element to its specific context within the **Active Directory** user base that your **IdP** depends upon.

Tip Any DN might change over the lifespan of its corresponding entity. For example, when you move entries in a tree, you might introduce new **OU** attributes or deprecate old ones that are elements of a DN. However, you can assign to any entity a reliable and unambiguous identity that persists beyond such changes to its context. To accomplish this, merely include a *universally unique identifier* (UUID) among the entity's set of operational attributes.

F

↑ [Return to Top](#)

federation

The whole collection of authentication servers that make **SSO** possible in a network by synchronizing their user bases to one **IdP** in common. This mutualized pooling of user bases bestows each valid user with a “federated identity” that spans an array of your **SPs**.

I

[↑ Return to Top](#)

IdP

identity provider. One [SAML 2.0](#)-compliant server (synchronized to at least one [Active Directory](#) user base), that authenticates user session requests upon demand for [SPs](#) in one network subdomain. Furthermore, an IdP normalizes data from a variety of directory servers (user stores).

Users send their login credentials to an IdP over HTTPS, so the IdP can authenticate them to whichever [SPs](#) they are authorized to use. As an example, consider how an organization could use three IdPs.

- An IdP in **legal**.example.com might authenticate user sessions for one [SP](#), by comparing user session requests to the user base records from one [Active Directory](#) server.
- An IdP in **sales**.example.com might authenticate user sessions for 15 [SPs](#), by comparing user session requests to the user base records from three [Active Directory](#) servers.
- An IdP in **support**.example.com might authenticate user sessions for four [SPs](#), by comparing user session requests to the user base records from two [Active Directory](#) servers.

**Caution**

Only a well known CA can issue the digital certificate for your IdP. Otherwise, you cannot use SSL, HTTPS, or LDAPS in Federation mode and, thus, all user credentials are passed in the clear.

Tip

We have tested Cisco DMS federation features successfully against [OpenAM](#), [PingFederate](#), and [Shibboleth](#). We recommend that you use an IdP that we have tested with Cisco DMS. We explicitly DO NOT support Novell E-Directory or Kerberos-based custom directories.

If your IdP fails, you can switch your authentication mode to LDAP or Embedded.

L

[↑ Return to Top](#)

LDAP

Lightweight Directory Access Protocol. A highly complex data model and communications protocol for user authentication. LDAP provides management and browser applications with access to directories whose data models and access protocols conform to X.500 series (ISO/IEC 9594) standards.

Note **Microsoft Active Directory is the only LDAP implementation that we support in this release.**

LDAPS

Secure LDAP. The same as ordinary LDAP, but protected under an added layer of SSL encryption.

Note **Before you try to configure SSL encryption and before you let anyone log in with SSL, you MUST:**

- Activate SSL on your [Active Directory](#) server and then export a copy of the server's digital certificate.
- Import into DMM the SSL certificate that you exported from [Active Directory](#).
- Restart Web Services (Tomcat) in AAI.

**Caution**

Is your DMM appliance one half of a failover pair?

If so, you will trigger immediate failover when you submit the command in AAI to restart Web Services. This occurs by design, so there is no workaround.

LDIF

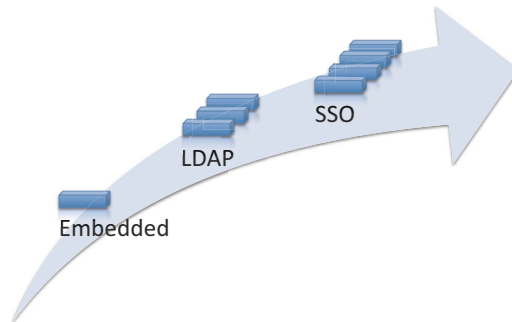

LDAP Data Interchange Format. A strict grammar that [SPs](#) and [IdPs](#) use to classify and designate named elements and levels in [Active Directory](#).

- O** [↑ Return to Top](#)
- OpenAM** [SAML 2.0-compliant identity and access management server platform written in Java. OpenAM is open source software available under the Common Development and Distribution \(CDDL\) license. OpenAM is derived from and replaces OpenSSO Enterprise, which also used CDDL licensing. See <http://www.forgerock.com/openam.html>.](#)
- OU** *organizational unit*. An [LDIF](#) classification type for a logical container within a hierarchical system. In [LDIF](#) grammar, the main function of an OU value is to distinguish among superficially identical [CNs](#) that might otherwise be conflated. For example:
- CN=John Doe, **OU=sales**, DN=example, DN=com
 - CN=John Doe, **OU=marketing**, DN=example, DN=com
- Note** **An LDAP expression must never include a space immediately to either side of a “=” sign.** Similarly, it must never include a space immediately to either side of an “objectClass” attribute. Otherwise, validation fails.
- P** [↑ Return to Top](#)
- PingFederate** [SAML 2.0-compliant identity and access management server platform written in Java. PingFederate is proprietary, commercial software. See <http://www.pingidentity.com>.](#)
- R** [↑ Return to Top](#)
- RDN** *relative distinguished name*. The [CN](#) for a [directory service entity](#), as used exclusively (and still without any explicit context) by the one [IdP](#) that has synchronized this entity against an [Active Directory](#) user base. When an [IdP](#) encounters any RDN attribute in an [LDIF](#) reference, the [IdP](#) expects implicitly that its [SAML 2.0-synchronized federation](#) is the only possible context for the [CN](#). It expects this because an [IdP](#) cannot authenticate—and logically should never encounter—a [directory service entity](#) whose RDN is meaningful to any other federation.
- S** [↑ Return to Top](#)
- SAML** *Security Assertion Markup Language*. XML-based open standard that security domains use to exchange authentication and authorization data, including assertions and security tokens. **We support SAML 2.0.**
- Shibboleth** A [SAML 2.0-compliant architecture](#) for federated identity-based authentication and authorization.

- SP** *service provider.* Server that requests and receives information from an **IdP**. For example, your DMM server is an **SP** for Cisco DMS.
- SSO** *single sign on.* (And sometimes “*single sign off.*”) The main user-facing benefit of **federated** mode is that **SPs** begin—and end, in some implementations—user sessions on behalf of their entire **federated**. SSO is a convenience for users, who can log in only once per day as their work takes them between multiple servers that are related but independent. Furthermore, SSO is a convenience to IT staff, who spend less time on user support, password fatigue, compliance audits, and so on.
- We DO NOT support single sign **off** in Cisco DMS 5.3.
 - We support only **SP-initiated SSO** in Cisco DMS 5.3.
- U** [↑ Return to Top](#)
- user base** The location of the user subtree in the **LDAP** directory tree. For example, **DC=ad, DC=com**.
- Note** **An LDAP expression must never include a space immediately to either side of a “=” sign.** Similarly, it must never include a space immediately to either side of an “objectClass” attribute. Otherwise, validation fails.
- user base DN** The **DN** for an **Active Directory** user base.
- Note** **An LDAP expression must never include a space immediately to either side of a “=” sign.** Similarly, it must never include a space immediately to either side of an “objectClass” attribute. Otherwise, validation fails.
- user filter** A user filter limits the scope of an agreement to import filtered records from an **Active Directory** user base.
- Note** **An LDAP expression must never include a space immediately to either side of a “=” sign.** Similarly, it must never include a space immediately to either side of an “objectClass” attribute. Nor can a group name include any spaces. Otherwise, validation fails.
- X** [↑ Return to Top](#)
- X-509** A standard for public key infrastructure. X.509 specifies, among other things, standard formats for public key certificates and a certification path validation algorithm.

Understand the Requirement to Authenticate Users

Although Cisco DMS always authenticates users, we support three authentication methods.

- *Embedded authentication* is completely native to Cisco DMS. It does not depend on any external servers.
- *LDAP authentication* causes Cisco DMS products to rely on one—and only one—Microsoft [Active Directory](#) server and a Microsoft Internet Information Server (IIS). Thus, setup and operation with this method are more complex than with embedded authentication.
- *Federation mode—also known as single sign-on (SSO)* causes Cisco DMS products to rely on a [SAML 2.0-compliant IdP](#) in combination with a Microsoft [Active Directory](#) server and IIS. Thus, setup and operation with this method are more complex than with [LDAP](#) authentication.

Note

You must choose one of these methods. The method that you use determines which login screen your users will see.

Tip

- **After a user session times out, we prompt the affected user to log in twice.**
- **Migration from one mode to another takes as long as 1 minute to finish (CSCtn22370).**
- **An unresponsive Active Directory server can hang a login prompt for 20 minutes without any error message.**

EMBEDDED MODE

LDAP MODE

FEDERATION (SSO) MODE ¹

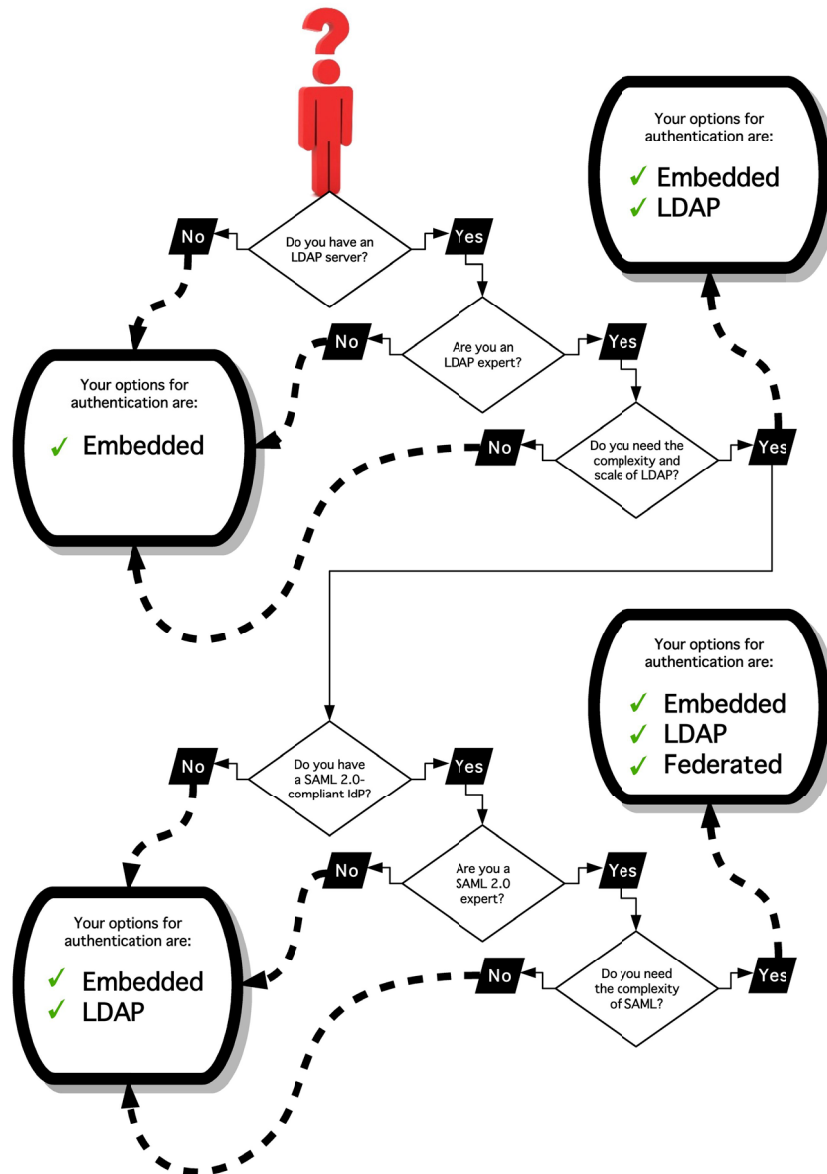

IdP-specific login screen

1. When any of your [federation](#) servers uses a self-signed certificate, we show your users **two SSL warnings** during login.

- [Understand Authentication Property Sheets for LDAP](#), page 8-17

LDAP is Highly Complex

Caution

LDAP-related features of Cisco DMS are meant for use by qualified and experienced administrators of Microsoft Active Directory. Unless you are an [Active Directory](#) and [LDAP](#) expert, we recommend that you use embedded authentication.

Plan Ahead

- Install and configure [Active Directory](#) and Internet Information Services (IIS) before you try to configure [LDAP](#) authentication mode or [federation](#) mode in DMS-Admin.

Tip

We support IIS 6 on Windows Server 2003.

- Make sure that you have generated or imported certificates as necessary and activated SSL on the [Active Directory](#) server before you try to configure SSL encryption.

Restrictions

Cisco DMS Release	Support for Active Directory	
	Trees	Forests
5.3.0	Yes	No

Synchronization Concepts

- [Synchronization \(Replication\) Overview](#), page 8-12
- [Synchronization Types](#), page 8-12
- [Understand Manual Synchronization](#), page 8-13
- [Understand Automatic Synchronization](#), page 8-13
- [Guidelines for Synchronization](#), page 8-14

Synchronization (Replication) Overview

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

When you choose [LDAP](#) authentication or [SSO](#) authentication, user account data originates from your [Active Directory](#) server. However, Cisco DMS *does not* synchronize (replicate) this data automatically, in real time. Instead, we cache it. Therefore, you must resynchronize user account data when you think it is appropriate to do so. You can:

- Resynchronize manually.
- Schedule synchronizations to recur in the future at set intervals.

DMS-Admin synchronizes all user accounts in the [Active Directory](#) “user base” that your filter specifies, **except users whose accounts are disabled** on your [Active Directory](#) server.

Synchronization Types

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

We support four types of [Active Directory](#) synchronization in [LDAP](#) mode or [federation](#) mode.

Initial	Update	Overwrite	Delete
Runs a one-time synchronization for a new filter that you never synchronized previously.	Runs an incremental, fast update to find and make up for any differences between user accounts that match your Active Directory filter and your local copy of those user accounts.	Overwrites your local copy of user accounts that correspond to your Active Directory filter with new copies of those user accounts. In addition, deletes your local copy of each user account that has been deleted from Active Directory since the last time that you ran a synchronization.	Deletes your local copy of user accounts that correspond to a defined Active Directory filter and deletes the entry for that filter from DMS-Admin.

Understand Synchronization of a DMM Group to an LDAP Filter

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

Is the Active Directory Filter Associated to a DMM User Group?	We Sync All Matching LDAP User Accounts to the	
	'All Users' Group in DMM	Associated User Group in DMM
Yes	Yes	Yes
No	Yes	N.A.

- In most cases, you can associate one [LDAP](#) filter apiece to one DMM user group. Likewise, in most cases, you can associate one DMM user group apiece to one [LDAP](#) filter. **The Digital Signs user group is an exception to both of these principles.** It is built-in to Cisco DMS.
- After you associate a DMM user group to an [LDAP](#) filter, you cannot use features on the Users tab to delete the DMM user group until after you delete the [LDAP](#) filter. However, even when you delete an [LDAP](#) filter, there is no requirement to delete its associated DMM user group. **Furthermore, there is no way for you to delete the Digital Signs user group.** It is built-in to Cisco DMS.

Understand Manual Synchronization

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

Manual synchronization mode requires you to choose Administration > Settings > Authentication > Synchronize Users > LDAP Bookmarks during all future synchronizations. Afterward, you must click Update.

Manual synchronization mode deletes your schedule for automatic synchronizations.

Understand Automatic Synchronization

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

Automatic synchronization mode automates and schedules incremental updates to user accounts that match [Active Directory](#) filters that you defined in DMS-Admin. When you use automatic synchronization mode, new fields and elements become available to you. These help you to configure the settings for automatic synchronization.

See the “[Understand Synchronization of a DMM Group to an LDAP Filter](#)” section on page 8-13.

Guidelines for Synchronization

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

We recommend that you synchronize your [LDAP](#) bookmarks periodically. Synchronization ensures that user and group membership associations are current and correct.

Sync Type	Best Practices
Initial	The <i>Initial</i> option is CPU-intensive for your DMM appliance and might lower performance temporarily. We recommend that you use it during <i>off-peak</i> hours only.
Update	We recommend that you use the <i>Update</i> option whenever: <ul style="list-style-type: none"> • A new user account in Active Directory should have login access to DMM. • User attributes¹ change in Active Directory for a user account in DMM. • A user account is disabled in Active Directory and should be deleted from DMM.
Overwrite	<p>Note The <i>Overwrite</i> option is CPU-intensive for your DMM appliance and might lower its performance temporarily. We recommend that you use this option during off-peak hours only.</p> <ul style="list-style-type: none"> • After a user account is deleted from Active Directory, this option deletes the corresponding user account from DMM. • After a user account is associated to a new first name, last name, or username, this option overwrites the outdated user account attributes.
Delete	<p> Caution The <i>Delete</i> option is destructive by design. We advise that you use it sparingly and with great caution.</p> <p>Note Typically, the deletion process takes about 1 minute to finish. However, when there are more than 50,000 users in the Active Directory database, this process might run in the background and take about 30 minutes to finish. In this case, the user interface in DMS-Admin can show that a bookmark was deleted even though the actual process has not finished. If you observe this behavior, simply allow 30 minutes for the operation to finish.</p>

1. Attributes that you entered on the Manage Attributes property sheet in DMS-Admin.

- [Manage LDAP \(Active Directory\) Attributes, page 8-29](#)

LDAP Concepts

- [Understand LDAP Attributes, page 8-15](#)
- [Guidelines for LDAP Filters, page 8-15](#)

Understand LDAP Attributes

**Note**

Microsoft Active Directory is the only LDAP implementation that we support in this release.

Ordinarily, DMS-Admin *will not* import any user account record from your [Active Directory](#) server when the value in it is blank for any of these attributes:

- **Login User Name**—This required value always must be unique.
- **First Name**—This required value might be identical for multiple users.
- **Last Name**—This required value might also be identical for multiple users.

However, you can import and synchronize all of the [Active Directory](#) user account records that match your filters. You can do this even when some of the user account records are incomplete because one or more of their attributes have blank values.

To prevent these undefined attributes from blocking the import of the user accounts they are meant to describe, you can enter generic values for most attributes in the Values to Use by Default column. DMS-Admin takes the generic values that you enter, and then inserts them automatically where they are needed.

**Tip**

Nonetheless, you cannot enter a default value for the Login User Name attribute. Usernames are unique.

Guidelines for LDAP Filters

**Note**

Microsoft Active Directory is the only LDAP implementation that we support in this release.

- Use “OU” values to impose rough limits on a filter, [page 8-15](#)
- Use “memberOf” values to pinpoint a filter more precisely, [page 8-16](#)
- Use “objectClass” values to match all user records, [page 8-16](#)

Use “OU” values to impose rough limits on a filter

- Never use a filter that defines the user base at the domain level. For example, this filter is not acceptable.

```
DC=example,DC=com
```

- Instead, use filters that define the user base at a lower level, as this one does.

```
OU=SanJose,DC=example,DC=com
```

- LDAP returns matched records **from all levels** within the user base that your filter defines.

Would a filter for "OU=SanJose, DC=example, DC=com" ever include any users from...?

<code>OU=RTP, DC=example, DC=com</code>	No ¹
<code>OU=Milpitas, OU=SanJose, DC=example, DC=com</code>	Yes ²
<code>OU=Sunnyvale, OU=SanJose, DC=example, DC=com</code>	Yes ²

- Research Triangle Park, NC, does not have any physical connection to San José, CA.
- Milpitas, CA and Sunnyvale, CA, are suburbs of San José, CA, which affects them directly and in multiple ways.

Use "memberOf" values to pinpoint a filter more precisely

- But what if you did not want to include any members of Milpitas or Sunnyvale? If your [Active Directory](#) server considered these cities (organizational units) to be subsets of San José, how could you exclude their members? To do so, you would use the

```
memberOf
```

attribute. It stops [LDAP](#) from matching records at any lower level than the one you name explicitly. In this scenario for example, you would use

```
memberOf=OU=SanJose, DC=example, DC=com
```

to match only the direct members of the "SanJose" [OU](#).

Use "objectClass" values to match all user records

- You can define a comprehensive filter that matches all user records.

```
objectClass=user
```

Password Concepts

- [Understand the Effects of a Changed Password in Active Directory, page 8-16](#)
- [Understand the Effects of a Blank Password in Active Directory, page 8-16](#)

Understand the Effects of a Changed Password in Active Directory

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

After you change a user password on your [Active Directory](#) server, there is no requirement to resynchronize the affected user account in DMS-Admin.

Understand the Effects of a Blank Password in Active Directory

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

- Even though it is possible in [Active Directory](#) to use a blank value for a password, Cisco DMS does not allow it.
- When you choose [LDAP](#) authentication, any user whose [Active Directory](#) password is blank is prevented from logging in to any component of Cisco DMS.
- Access is enabled or restored after the password is populated on the [Active Directory](#) server.

Understand Authentication Property Sheets for LDAP

Note

Microsoft Active Directory is the only LDAP implementation that we support in this release.

The Authentication page contains four tabbed property sheets.

Select Mode¹		<i>Embedded, LDAP or SSO</i> Select Mode is by default the only active tab. Your choices on the Select Mode property sheet determine whether you have access to the other three property sheets.
Define Filter		<i>LDAP or SSO</i> Your choices on the Define Filter property sheet help you to configure and add a new agreement.
Synchronize Users		<i>LDAP or SSO</i> Your choices on the Synchronize Users property sheet help you to submit a new agreement.
Manage Attributes		<i>LDAP or SSO</i>

1. In most production environments, you can expect to use the Select Mode property sheet only one time.

Federated Identity and Single Sign-on (SSO) Concepts

- [IdP Requirements, page 8-17](#)
- [Configuration Workflow to Activate Federation \(SSO\) Mode, page 8-18](#)
- [Authentication Scenarios for User Sessions in Federation \(SSO\) Mode, page 8-18](#)

IdP Requirements

To use [federation \(SSO\)](#) mode in Cisco DMS, you must have access to an [IdP](#) that meets our requirements. Your [IdP](#) must meet **ALL OF THESE CRITERIA IN COMBINATION**:

- Support [SAML 2.0](#).
- Support these two [SAML](#) profiles:
 - Web Browser [SSO](#) Profile
 - Enhanced Client or Proxy (ECP) Profile
- Generate assertions in which the [SAML](#) “UID” attribute is mapped to the local portion of an authenticated user’s username.
- Generate SAML responses that are no larger than 16K bytes. (CSCua10799)
- Use a digital certificate from a well-known [CA](#) (but only if you will use HTTPS).
- Include a “<SingleSignOnService>” entry with SOAP binding in its IdP metadata. For example:

```
<SingleSignOnService Location=http://idp.example.com/idp/SSO.sm12"
Binding="urn:oasis:names:tc:SAML:2.0:bindings:SOAP"/>
```

In practice, these requirements limit your IdP to ones that we certify and NO OTHER. We certify OpenAM, PingFederate, and Shibboleth. (CSCua29696)

Configuration Workflow to Activate Federation (SSO) Mode

1. Configure and set up an [Active Directory](#) server.
2. Configure and set up a [SAML 2.0-compliant IdP](#).

Note When you use a “**fresh install**” of Cisco DMS 5.3 (as opposed to an upgrade), your DMM appliance is configured to use **embedded authentication mode** by default. But when you **upgrade** a DMM server that was already configured for an earlier Cisco DMS release, it might use **either embedded mode or LDAP mode**.

3. Obtain a [digital certificate](#) from a trusted CA and install it on your [IdP](#).
4. Use DMS-Admin to configure Cisco DMS for [federation](#) mode.
5. Export [SAML 2.0-compliant metadata](#) from your DMM server and import it into your [IdP](#).
6. Export [SAML 2.0-compliant metadata](#) from your [IdP](#) and import it into your DMM server.
7. Configure [Active Directory](#) exactly as you would in [LDAP](#) mode.
8. Click **Update** to save your work, and then advance to the Synchronize Users property sheet.
9. Synchronize DMM with your [Active Directory](#) server to populate the DMM user database.

Note You **MUST** configure at least one [LDAP](#) bookmark.

10. Synchronize users exactly as you would in [LDAP](#) mode.

Note Whenever you change any setting or value on your [IdP](#) or any of your [SPs](#), you must reestablish their pairing to restore mutual trust among them.

11. Click **Update** to save your work.

Authentication Scenarios for User Sessions in Federation (SSO) Mode

- [SSO Scenario 1—Trusted + Valid + Authorized](#)
- [SSO Scenario 2—Trusted + Valid + NOT Authorized](#)
- [SSO Scenario 3—Nothing Known](#)

SSO Scenario 1—Trusted + Valid + Authorized

1. A web browser requests access to a protected resource on an **SP**.
Your **federation** will not approve or deny this request until it knows more.
 2. The **SP** asks its **IdP** if the browser is currently authenticated to any valid user account in the **CoT**.
 3. The **IdP** verifies that:
 - The browser is already connected to an **SP** elsewhere in the **CoT**, having authenticated successfully to a valid user account and having received a SAML “token” or “passport” that authorizes at least some access.
 - **The user account has sufficient permissions to access the protected resource.**
 4. The **IdP** acts on the **SP**’s behalf and redirects the browser immediately to the protected resource.
-

SSO Scenario 2—Trusted + Valid + NOT Authorized

1. A web browser requests access to a protected resource on an **SP**.
Your **federation** will not approve or deny this request until it knows more.
 2. The **SP** asks its **IdP** if the browser is currently authenticated to any valid user account in the **CoT**.
 3. The **IdP** verifies that:
 - The browser is already connected to an **SP** elsewhere in the **CoT**, having authenticated successfully to a valid user account and having received a SAML “token” or “passport” that authorizes at least some access.
 - **The user account DOES NOT have sufficient permissions.**
 4. The **IdP** redirects the browser to the **SP**, where an **HTTP 403 Forbidden** message states that the user is not authorized to access the protected resource.
-

SSO Scenario 3—Nothing Known

1. A web browser requests access to a protected resource on an **SP**.
Your **federation** will not approve or deny this request until it knows more.
2. The **SP** asks its **IdP** if the browser is currently authenticated to any valid user account in the **CoT**.
3. The **IdP** reports that:
 - The browser is not yet connected to any **SP** in the **CoT**.
 - The browser is not yet authenticated to any valid user account.
 - **We cannot tell if the browser's human operator is a valid and authorized user, a valid but confused user, or an intruder.**
4. The **SP** redirects the browser automatically to an HTTPS login prompt on the **IdP**, where one of the following occurs:
 - **The browser's human operator successfully logs in to a valid user account.** The **IdP** attaches a SAML “token” or “passport” to the browser session, authorizing at least some access. And:
 - The user account has permission to access the protected resource. So, the **IdP** acts on the **SP**'s behalf and redirects the browser immediately to the protected resource.

OR

- The user account DOES NOT have permission to access the protected resource. So, the **IdP** redirects the browser to the **SP**, where an **HTTP 403 Forbidden** message states that the user is not authorized to access the protected resource.
- **The browser's human operator fails to log in.** So, lacking any proof that this person is authorized, we block access to every protected resource until the human operator can log in successfully.

Migration Between Authentication Methods

- [Understand Migration \(from Either LDAP or SSO\) to Embedded, page 8-20](#)
- [Understand Migration \(from Embedded\) to Either LDAP or SSO, page 8-21](#)

Understand Migration (from Either LDAP or SSO) to Embedded

When you migrate from **LDAP** (via **Active Directory**) or **federation** mode to embedded authentication mode, you must explicitly choose whether to keep local copies of the:

- User accounts that were associated to **LDAP** filters.
- Groups and policies that were associated to **LDAP** filters.

Note

- **Unless you choose explicitly to keep the local copy of a user, a group, or a policy, we discard the local copy.**
- **Migration from one mode to another takes as long as 1 minute to finish (CSCtn22370).**

The result varies according to the combination of your choices.

When You Keep Local Copies of			The Result
Users	Groups	Policies	
Yes	Yes	Yes	<ul style="list-style-type: none"> We preserve all local information. We overwrite all LDAP-derived user account passwords with <i>CiscoDMMvp99999</i>.¹
Yes	No	No	<ul style="list-style-type: none"> We preserve all local user accounts. However, we overwrite all LDAP-derived user account passwords with <i>CiscoDMMvp99999</i>.¹ We discard all LDAP-derived groups. We discard all LDAP-derived policies.
No	Yes	Yes	<ul style="list-style-type: none"> We discard all LDAP-derived user accounts. We preserve all LDAP-derived groups. However, they are empty. We preserve all LDAP-derived policies. Although they no longer apply to anyone, you can reuse them and apply them to any remaining user accounts and any future user accounts as you see fit.
No	No	No	<ul style="list-style-type: none"> We discard all LDAP-derived users, groups, and policies.

1. This security feature protects your network and user data. If anyone gains unauthorized access to the exported file and tries to use it, [Active Directory](#) rejects the invalid passwords.

Understand Migration (from Embedded) to Either LDAP or SSO

Note

- **Before you migrate from embedded authentication mode to federation mode, you must install a digital certificate from a trusted CA on your IdP server.** Otherwise, you cannot migrate to federation mode at all.
- After you migrate from embedded authentication mode to either LDAP (Active Directory) mode or federation mode, the locked property sheets become unlocked. **You must use them.**
- **Migration from one mode to another takes as long as 1 minute to finish (CSCtn22370).**

Procedures

- [Export the Root CA X.509 Certificate from Your Active Directory Server, page 8-22](#)
- [Configure DMM to Trust the Active Directory Root CA, page 8-22](#)
- [Choose an Authentication Method, page 8-23](#)
- [Configure LDAP \(Active Directory\) Settings, page 8-24](#)
- [Configure Federation Services for SSO, page 8-33](#)

Export the Root CA X.509 Certificate from Your Active Directory Server

Procedure

-
- Step 1** Open a web browser on your [Active Directory](#) server and connect to <http://localhost/certsrv>.
- Step 2** Click **Download a CA certificate**.
- Step 3** Choose the current CA certificate.
- Step 4** Choose **DER encoded**.

The X.509 certificate that you export must be DER-encoded, and it can be binary or printable (Base64). However, when you use Base64, the certificate file must include these lines:

```
-----BEGIN CERTIFICATE-----
-----END CERTIFICATE-----
```

- Step 5** Click **Download CA certificate**.
- Step 6** Save this certificate in a file.
- For example, you might call the certificate `ADcertificate.cer`.
- Step 7** Stop. You have completed this procedure.
-

Configure DMM to Trust the Active Directory Root CA

Before You Begin

- Log in to DMM.

Procedure

-
- Step 1** Click **Administration**.

- Step 2** Choose **Security > Authentication > Select Mode**.
- Step 3** Choose **LDAP**.
- Step 4** Check the Use SSL Encryption check box.

Additional user interface elements now appear, which are relevant to SSL and digital certificates.

Use SSL Encryption: (Requires restart of Web Services from AAI for changes to take effect)

Active Directory Certificate File

Upload

- Step 5** Upload the root CA certificate file that you saved locally.
- Click **Upload**, and then click **Add**.
 - Browse to the file on a local volume.
 - Click the filename and press **Enter**.
 - Click **OK** to save your work and dismiss the dialog box.
- Step 6** Enter the details for your [Active Directory](#) server.

**Tip**

Be sure to use the logical port where your [Active Directory](#) server actually listens for SSL connections. The standard port number for LDAPS is **636**. However, your Active Directory server might be configured to use some other port.

- Step 7** As prompted, use DMS-Admin to restart Web Services (Tomcat).
The installed certificate cannot take effect until after you restart Tomcat.
- Step 8** Stop. You have completed this procedure.

Choose an Authentication Method

Before You Begin

- Log in to DMM.

Procedure

- Step 1** Click **Administration**.

- Step 2** Choose **Security > Authentication**.
- Step 3** Use elements on the Select Mode property sheet to choose an authentication mode.
- Step 4** Click **Update**.

**Note**

Migration from one mode to another takes as long as 1 minute to finish (CSCtn22370).

- The authentication settings that you changed are now in effect.
- Step 5** Stop. You have completed this procedure.

What to Do Next

- **OPTIONAL**—*Did you choose LDAP (Active Directory) or SSO?*
Proceed to the “[Define LDAP \(Active Directory\) Filters](#)” section on page 8-24

Define LDAP (Active Directory) Filters

Before You Begin

- Log in to DMM.
- Choose [LDAP](#) or [federation](#) as your authentication method.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Security > Authentication**.

Step 3 Click **Define Filter**.

- Step 4** Do the following.
- Use elements on the Define Filter property sheet to define, validate, and add one [LDAP](#) filter.
 - Click **Update**.
 - Repeat this step for each filter to be added.

The authentication settings that you changed are now in effect.

- Step 5** Stop. You have completed this procedure.

Related Topics

Import User Accounts that Match an LDAP (Active Directory) Filter

Before You Begin

- Log in to DMM.
- Choose [LDAP](#) or [SSO](#) as your authentication method.
- Define [LDAP](#) filters that will match the user accounts that you want to import.

Procedure

- Step 1** Click **Administration**.

- Step 2** Choose **Security > Authentication > Synchronize Users**.

Tip Is the **Synchronize Users** tab disabled (dimmed), so that you cannot click it? If so, refresh your browser.

- Step 3** Find the relevant bookmark among all your saved bookmarks.

- Step 4** Choose **Initial** as the synchronization type.

Synchronization: Initial Update Overwrite Delete

- Step 5** Click **Submit**.

Note Please wait. Your request might take as long as 1 minute to process (CSCTn22370).

- Step 6** Stop. You have completed this procedure.

What to Do Next

- **OPTIONAL**—*Would you like to associate a set of imported users with a new group?*
Proceed to the “[Derive User Group Membership Dynamically from an LDAP \(Active Directory\) Filter](#)” section on page 8-31.

Define the LDAP (Active Directory) Synchronization Schedule

Before You Begin

- Log in to DMM.
- Choose [LDAP](#) or [SSO](#) as your authentication method.
- Define [LDAP](#) filters and bookmarks.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Security > Synchronize Users > Scheduling**.

Step 3 Choose between manual synchronization and automatic synchronization.

Note You will not see any of the elements that the “[Elements for Bookmarks](#)” table describes until after you define at least one filter on the [Define Filter](#) property sheet.

Step 4 Click **Update**.

The authentication settings that you changed are now in effect.

Step 5 Stop. You have completed this procedure.

What to Do Next

- **OPTIONAL**—*Would you like to associate attribute names in DMS-Admin and Active Directory?*
If so, proceed to the “[Manage LDAP \(Active Directory\) Attributes](#)” section on page 8-29.

- **OPTIONAL**—Should Cisco DMS expect that your Active Directory server uses factory-preset attribute names? If so, proceed to the “[Manage LDAP \(Active Directory\) Attributes](#)” section on page 8-29.
- **OPTIONAL**—Should Cisco DMS expect that your Active Directory server uses custom attribute names? If so, proceed to the “[Manage LDAP \(Active Directory\) Attributes](#)” section on page 8-29.

Related Topics

- [Define LDAP \(Active Directory\) Filters](#), page 8-24
- [Elements to Schedule Synchronization](#), page 8-50

Manage LDAP (Active Directory) Attributes

Before You Begin

- Log in to DMM.
- Choose [LDAP](#) or [SSO](#) as your authentication method.
- Define [LDAP](#) filters and bookmarks.
- Configure the [LDAP](#) synchronization schedule.

Procedure

Step 1 Click **Administration**.

Step 2 Click **Security > Authentication > Manage Attributes**.

Tip **Is the Manage Attributes tab disabled (dimmed), so that you cannot click it?** If so, refresh your browser.

Step 3 Use elements on the Manage Attributes property sheet to:

- Set the associations between DMS-Admin attribute names and their corresponding [Active Directory](#) attribute names.
- Use the predefined and typical names for [Active Directory](#) attributes (shown in grey text) or edit those attribute names so they match the names that your [Active Directory](#) server uses.
- Enter the values to use by default in DMS-Admin when a user account attribute is not defined on your [Active Directory](#) server.

You must enter a value for each mandatory attribute. You cannot enter a value to use by default for user names, because each user name is unique.

- Step 4** Click **Update**.
The authentication settings that you changed are now in effect.
- Step 5** Stop. You have completed this procedure.

Related Topics

- [Define the LDAP \(Active Directory\) Synchronization Schedule, page 8-28](#)
- [Elements to Manage Attributes, page 8-51](#)

Configure Automatic LDAP (Active Directory) Synchronization

Before You Begin

- Log in to DMM.
- Choose [LDAP](#) or [SSO](#) as your authentication method.
- Define [LDAP](#) filters and bookmarks.
- Configure the [LDAP](#) synchronization schedule.

Procedure

- Step 1** Click **Administration**.

- Step 2** Choose **Security > Authentication > Synchronize Users > Scheduling**.
- Step 3** Click the calendar icon (📅) to choose the start date for synchronization.
- Step 4** Choose the hour and minute when synchronization should begin. Then, choose either **AM** or **PM** as the period.
- Step 5** From the Repeat Interval list, choose the interval of recurrence:

Interval	Description
Never	Synchronization occurs once and does not recur.
Every Day	Synchronization recurs once every 24 hours. You must set the hour and minute when it should start.
Every Week	Synchronization recurs once every 7 days. You must set the hour and minute when it should start.

Interval	Description
Every Month	Synchronization recurs once each month. You must set the hour and minute when it should start.
Custom	Synchronization recurs at an interval of your choosing. You must set the hour and minute when it should start. Choose Days , Weeks , or Months as the interval type. <ul style="list-style-type: none"> Choose a day of the month from 1 to 30 when the interval type is Days. Choose a day of the week when the interval type is Weeks. Choose an interval of recurrence from 1 to 6 when the interval type is Months.

Step 6 (Optional)

- Did you click the Automatic Synchronization radio button?
- And should a one-time synchronization start immediately, in addition to the start date and time that you specified?

If so, check the **Synchronize users immediately** check box.

Step 7 Click **Update**.

The authentication settings that you changed are now in effect.

Step 8 Stop. You have completed this procedure.

Derive User Group Membership Dynamically from an LDAP (Active Directory) Filter

You can populate a user group with the returned output from a User Base DN query. However, a group of this kind differs in important ways from a group that you populate manually.

**Note**

- **Membership of such groups is dynamic—based on shared characteristics among the group of Active Directory users who match your query.**
- We update and clean these groups automatically during synchronization. **Their membership will change after synchronization runs**, when the corresponding records in [Active Directory](#) show that a user's membership should start or stop.
- An imported [Active Directory](#) group is always **read-only** in DMS-Admin. By protecting it, we ensure that it is always correct, relative to the original and subject to any delay between synchronizations. For this reason, you cannot edit their memberships rolls manually.
- When you try to delete a user from a group of this type, DMS-Admin shows an error message: **"You cannot remove any user from a group associated with an LDAP bookmark."**

Before You Begin

- Log in to DMM.
- Choose [LDAP](#) as your authentication method.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Security > Authentication > Define Filter**.

Tip **Is the Define Filter tab disabled (dimmed), so that you cannot click it?** If so, refresh your browser.

Step 3 Use elements on the Define Filter property sheet to define, validate, and add one [LDAP](#) filter.

Step 4 *Would you like to add users to a group that exists already?* If so, choose that group name from the User Group (in DMM) list.

OR

Would you like to create and populate an entirely new group? If so, choose **Create a New User Group** from the User Group (in DMM) list. Then, give the new user group a name.

- Group names in DMM can include alphanumeric characters (**0-9**; **a-z**; **A-Z**), hyphens (-), underscores (_), and periods (.).
- Spaces are forbidden.
- Other forbidden characters include:

```
~\!@#$$%^&*()+={}| \: ; " ' ' <> ? /
```

Step 5 Click **Validate**.

Step 6 Click **Add**.

Note **Please wait. Your request might take as long as 1 minute to process (CSCTn22370).**

Step 7 Stop. You have completed this procedure.

Configure Federation Services for SSO

- [IdP Configuration Examples, page 8-33](#)
- [Export SP Metadata from DMM, page 8-43](#)
- [Import IdP Metadata into DMM, page 8-43](#)
- [Bypass External Authentication During Superuser Login, as Needed, page 8-45](#)

IdP Configuration Examples

This section includes configuration examples from IdP implementations that have passed internal Cisco tests for interoperability with Cisco DMS.

**Note**

- **We provide these rough examples as a courtesy only.** We do not endorse any IdP by name, including any whose setup we mention by name in these examples. Likewise, we do not influence the development of any IdP. We do not know when or how its configuration workflows, daily operation, or overall quality might change in the future. For these reasons, we cannot know beforehand when or how the natural course of its ongoing development might invalidate one or more of the examples in this section. Therefore: Obtain all necessary IdP documentation from your IdP vendor, not Cisco.
- **You are free to choose, configure, and use an IdP at your own discretion—and your own risk.** We do not develop, maintain, or support any IdP. Nor do we warrant that your choice of IdP is free of defects, non-infringing, or fit for any purpose.

- [Example: Configure OpenAM to Interoperate with Cisco DMS, page 8-34](#)
- [Example: Configure Shibboleth to Interoperate with Cisco DMS, page 8-36](#)
- [Example: Configure PingFederate to Interoperate with Cisco DMS, page 8-40](#)

Example: Configure OpenAM to Interoperate with Cisco DMS**Before You Begin**

- Obtain a digital identity certificate from a well-known CA, install it on your IdP host system, and then enable SSL.

Procedure

<p>Step 1 Configure OpenAM to use a datastore from Active Directory, unless it already does so.</p>	<p>Note In Federation mode, we use a <i>synchronization</i> process to learn which usernames are valid in your organization. Later and separately, we use an <i>authentication</i> process to verify user-login credentials. And even though we expect most IdPs will source both of these services from a Microsoft Active Directory server, your organization might use some other other LDAP system to authenticate user sessions. When this is the case, you must install and configure an Active Directory server for synchronization use by Cisco DMS. Otherwise, we cannot learn which usernames are valid. In turn, ordinary users cannot log in to Cisco DMS. To prevent this outcome, you must replicate and synchronize a datastore between your new Active Directory server and your existing LDAP server. Afterward, Cisco DMS can synchronize with the Active Directory datastore.</p> <p>a. In OpenAM Web, choose Access Control > Top Level Realm > Data Stores.</p> <p>b. Enter values to define the attributes of your Active Directory DataStore.</p> <p>You might enter values for some of the attributes (like these ones, for example)...</p> <pre>LDAP Server: <IP_ADDRESS>:389 LDAP Bind DN: CN=Administrator,CN=Users,DC=win2003esx,DC=example,DC=com LDAP Bind Password: ***** LDAP Organization DN: OU=SystemTest,DC=win2003esx,DC=example,DC=com LDAP Users Search Attribute: sAMAccountName LDAP Users Search Filter: (objectclass=user) Authentication Naming Attribute: sAMAccountName</pre> <p>... while leaving other attribute values undefined.</p> <pre>Attribute Name Mapping: <Empty> LDAP Groups Search Attribute: <Empty> LDAP Groups Search Filter: <Empty> LDAP Groups container Naming Attribute: <Empty> LDAP Groups Container Value: <Empty> Attribute Name of Unqie Member: <Empty> LDAP People Container Naming Attribute: <Empty> LDAP People Container Value: <Empty> Persistent Search Base DN: <Empty> Persistent Search Filter: <Empty></pre> <p>Note These are merely examples.</p> <p>c. Click Federation, and then click your IdP server instance—for example, dmsIdp.</p> <p>d. Click Assertion Processing.</p> <p>e. Change the IDP Attribute Map value from UID=uid to UID=sAMAccountName.</p>
--	--

<p>Step 2 Install <i>Enhanced Client or Proxy</i> (ECP), a SAML profile plugin, if you will make API system calls to OpenAM¹.</p>	<ol style="list-style-type: none"> a. Log in to your Cisco.com user account. b. Go to http://cisco.com/cisco/software/release.html?mdfid=280171249&softwareid=282100271&release=5.3&rellifecycle=&reind=AVAILABLE&reltype=all, navigate to the download page for our implementation of ECP², and then download it. c. Use Maven or another method to download release 1.2.14 of the open source logging framework called log4j. d. Copy your downloaded ECP and log4j files to <code>/\$OPENSSO_HOME/WEB-INF/lib, .</code> e. Restart your servlet container—for example, tomcat. f. In OpenAM Web, click Federation, and then click your IdP server instance—for example, dmsIdp. g. Click Advanced. h. In the ECP Configuration area, set the IDP Session Mapper value to com.cisco.dms.core.security.aaa.sso.saml2.ecp.idp.plugin.DmsIDPECPSessionMapper. i. Click Save.
<p>Step 3 Export SP metadata from Cisco DMS.</p>	<p>Export metadata from each SP that will participate in your OpenAM CoT.</p> <p>Tip For Cisco DMS, see the “Export SP Metadata from DMM” topic.</p>
<p>Step 4 Import SP metadata from Cisco DMS.</p>	<ol style="list-style-type: none"> a. Go to the console page and click Register Remote Service Provider. b. Check the File check box. c. Click Upload, and then navigate to the SP metadata that you exported from DMS-Admin and saved as dms_sp_config.xml. d. Click Configure, and then click Federation. e. Make sure that <i>dmsServiceProvider (SAMLv2 SP Remote)</i> has a defined value.
<p>Step 5 Make sure that OpenAM is configured to issue the <i>Principal</i> attribute.</p>	<ol style="list-style-type: none"> a. In OpenAM Web, click Federation, and then click your IdP server instance—for example, dmsIdp. b. Click Assertion Processing. c. In the Attribute Mapper area, set the Attribute Map value to UID=uid. d. Click Back. e. Click the SP entity instance for your DMM appliance. The Assertion Content tab is selected automatically. f. In the Request/Response Signing area, check both of these check boxes: <ul style="list-style-type: none"> • Authentication Requests Signed • Assertions Signed g. Choose Access Control > / (Top Level Realm) > Authentication. h. Click All Core Settings. i. Make sure that the User Profile value is set to Required. This will cause OpenAM to pass the user IDs of logged-in users to DMM and your other SPs. j. Click Save, and then click Back to Authentication. k. Log out of OpenAM Web.

Step 6	Cause Cisco DMS to trust OpenAM.	See the “ Import IdP Metadata into DMM ” topic.
Step 7	Use the Linux CLI to export IdP metadata.	<pre>wget --no-check-certificate https://<IdP_serverip>:<service_port>/opensso/saml2/jsp/exportmetadata.jsp -O dms_idp_config.xml</pre>
Step 8	Stop.	You have completed this procedure.

- Also, DMS-Admin includes a feature to test the configuration of your IdP. In the case of OpenAM, this testing feature uses ECP and fails in its absence.
- We provide a downloadable ECP implementation as a courtesy to you. Alternatively, you can obtain ECP from another source at your discretion.

Example: Configure Shibboleth to Interoperate with Cisco DMS

Before You Begin

- Obtain a digital identity certificate from a well-known CA, install it on your IdP host system, and then enable SSL.

Procedure

Step 1	Obtain and install Shibboleth.	<p>a. Go to http://www.shibboleth.net/downloads/identity-provider/latest/.</p> <p>b. Download the latest Identity Provider software package, such as shibboleth-identityprovider-2.3.0-bin.zip.</p> <p>c. Extract the downloaded archive, and then make the installer script within it, named <i>install.sh</i>, executable. For example:</p> <pre>\$ unzip shibboleth-identityprovider-2.3.0-bin.zip \$ cd shibboleth-identityprovider-2.3.0 \$ chmod u+x install.sh</pre> <p>d. Run the script to install Shibboleth.</p> <pre>\$./install.sh</pre> <ul style="list-style-type: none"> The installer will prompt you to specify the installation directory. Its default is /opt/shibboleth-idp. In addition, it will prompt you to enter your Shibboleth system’s FQDN, such as shibboleth.example.com. <p>Respond appropriately to these prompts.</p> <p>Shibboleth is now installed and you have completed its basic configuration. Your new Shibboleth system contains these subfolders.</p> <pre>/opt/shibboleth-idp/bin/ /opt/shibboleth-idp/conf/ /opt/shibboleth-idp/credentials/ /opt/shibboleth-idp/lib/ /opt/shibboleth-idp/logs/ /opt/shibboleth-idp/metadata/ /opt/shibboleth-idp/war/</pre>
Step 2	Export SP metadata from Cisco DMS.	<p>Export metadata from each SP that will participate in your Shibboleth CoT.</p> <p>Tip For Cisco DMS, see the “Export SP Metadata from DMM” topic.</p>

Step 3	Import SP metadata from Cisco DMS.	Use SFTP or another method to save imported metadata where Shibboleth will access it: <code>/opt/shibboleth-idp/metadata/</code> .
Step 4	Log in remotely.	Use SSH, remote desktop, VNC, or a direct console connection to log in remotely to the system where you installed Shibboleth.
Step 5	Edit the attribute filter file.	<p>a. Open <code>/opt/shibboleth-idp/conf/attribute-filter.xml</code> for editing.</p> <p>b. Change the attributeID value (at or near line 24) to uid.</p> <pre><afp:AttributeRule attributeID="uid"></pre>
Step 6	Edit the attribute resolver file.	<p>a. Open <code>/opt/shibboleth-idp/conf/attribute-resolver.xml</code> for editing.</p> <p>b. Find this section:</p> <pre><!-- ===== -> <!-- Attribute Definitions -> <!-- ===== -></pre> <p>c. Enter these lines after the Attribute Definitions section heading, at or near line 29.</p> <pre><resolver:AttributeDefinition xsi:type="ad:Simple" id="uid" sourceAttributeID="sAMAccountName"> <resolver:Dependency ref="myLDAP" /> <resolver:AttributeEncoder xsi:type="enc:SAML2String" name="urn:oid:0.9.2342.19200300.100.1.1" friendlyName="uid" /> <resolver:AttributeEncoder xsi:type="enc:SAML2StringNameID" nameFormat="urn:oasis:names:tc:SAML:2.0:nameid-format:transient" /> </resolver:AttributeDefinition></pre> <p>d. Find this section:</p> <pre><!-- ===== -> <!-- Data Connectors -> <!-- ===== -></pre> <p>e. Enter these lines after the Data Connectors section heading, at or near line 288.</p> <pre><resolver:DataConnector id="myLDAP" xsi:type="dc:LDAPDirectory" xmlns="urn:mace:shibboleth:2.0:resolver:dc" ldapURL="ldap://<YOUR_ACTIVE_DIRECTORY_SERVER_IP>" baseDN="cn=<USERBASE>, dc=<HOSTNAME>, dc=<EXAMPLE>, dc=<COM>" principal="cn=<ADMINISTRATOR_CN>, cn=<USERBASE>, dc=<HOSTNAME>, dc=<EXAMPLE>, dc=<COM>" principalCredential="<ADMINISTRATOR_PASSWORD>" <dc:FilterTemplate> <![CDATA[(sAMAccountName=\$requestContext.principalName)]]> </dc:FilterTemplate> <LDAPProperty name="java.naming.referral" value="follow"/> </resolver:DataConnector></pre>
Step 7	Edit the handler file.	<p>a. Open <code>/opt/shibboleth-idp/conf/handler.xml</code> for editing.</p> <p>b. Uncomment line 109.</p> <pre><!-- Username/password login handler --> <ph:LoginHandler xsi:type="ph:UsernamePassword" jaasConfigurationLocation="file:///opt/shibboleth-idp/conf/login.config"> <ph:AuthenticationMethod>urn:oasis:names:tc:SAML:2.0:ac:classes:PasswordProtect edTransport</ph:AuthenticationMethod> </ph:LoginHandler></pre>

Step 8	Edit the login config file.	<p>a. Open <code>/opt/shibboleth-idp/conf/login.config</code> for editing.</p> <p>b. Find this string, at or near line 45:</p> <pre>};</pre> <p>c. Enter this material immediately before <code>};</code> .</p> <pre>edu.vt.middleware.ldap.jaas.LdapLoginModule optional ldapUrl="ldap://<YOUR_ACTIVE_DIRECTORY_SERVER_IP>:389" bindDn="cn=<ADMINISTRATOR_CN>, cn=<USERBASE>, dc=<HOSTNAME>, dc=<EXAMPLE>, dc=<COM>" bindCredential="<ADMINISTRATOR_PASSWORD>" baseDn="cn=<USERBASE>, dc=<HOSTNAME>, dc=<EXAMPLE>, dc=<COM>" ssl="false" tls="false" userFilter="sAMAccountName={0}";</pre>
Step 9	Edit the replying party file.	<p>a. Open <code>/opt/shibboleth-idp/conf/replying-party.xml</code> for editing.</p> <p>b. Find this section:</p> <pre><!-- ===== --> <!-- Metadata Configuration --> <!-- ===== --></pre> <p>c. Enter these lines after the Metadata Configuration section heading, at or near line 123.</p> <pre><metadata:MetadataProvider id="<HOSTNAME_ONLY_FOR_YOUR_SP>" xsi:type="FilesystemMetadataProvider" xmlns="urn:mace:shibboleth:2.0:metadata" metadataFile="/opt/shibboleth-idp/metadata/<EXPORTED_SP_SETTINGS_FILENAME>.xml" maintainExpiredMetadata="true" /> </metadata:MetadataProvider></pre>

Step 10	Prepare your Shibboleth config for use by Cisco DMS.	<p>a. Open <code>/opt/shibboleth-idp/metadata/opt/shibboleth-idp/metadata/Idp-metadata.xml</code> for editing.</p> <p>b. Delete lines 9 through 11.</p> <pre><Extensions> <shibmd:Scope regexp="false"><EXAMPLE>.<COM></shibmd:Scope> </Extensions></pre> <p>c. Delete lines 67 through 69.</p> <pre><Extensions> <shibmd:Scope regexp="false"><EXAMPLE>.<COM></shibmd:Scope> </Extensions></pre> <p>d. Find this string:</p> <pre></IDPSSODescriptor></pre> <p>e. Enter this new binding immediately before <code></IDPSSODescriptor></code>.</p> <pre><SingleSignOnService Binding="urn:oasis:names:tc:SAML:2.0:bindings:SOAP" Location="https://<YOUR_SHIBBOLETH_SERVER_FQDN>:8443/idp/profile/SAML2/SOAP/EC " /></pre> <p>f. Append <code>:8443</code> to the end of every FQDN in this file.</p> <p>g. Save your edited copy of this file to your local system. Be sure to use your Shibboleth hostname in the local filename. For example, you might name this local copy <code>idp-shibboleth.xml</code>.</p>
Step 11	Cause Cisco DMS to trust Shibboleth.	See the “Import IdP Metadata into DMM” topic.
Step 12	Deploy Shibboleth.	<code>cp /opt/shibboleth-idp/war/idp.war /usr/local/tomcat/webapps/</code>
Step 13	Test your work.	<p>a. Restart Tomcat.</p> <p>b. Check for the “OK” message at <code>http://<hostname>:8080/idp/profile/Status</code>.</p>
Step 14	Stop.	You have completed this procedure.

Example: Configure PingFederate to Interoperate with Cisco DMS**Before You Begin**

- Install [PingFederate](#) and configure it with at least one Adapter instance to your authentication server, such as [LDAP](#) or OAM.

Procedure

Step 1	Export SP metadata from Cisco DMM.	Export metadata from each SP that will participate in your PingFederate CoT . Tip For Cisco DMS, see the “ Export SP Metadata from DMM ” topic.
Step 2	Import SP metadata into PingFederate.	<ol style="list-style-type: none"> Log in to PingFederate as its administrator. Find the SP Connections area in the My IdP Configuration column and click Create New. Click Do not use a template for this connection on the <i>Configuring SP Connection/Connection Template</i> page, and then click Next. Check the Browser SSO Profiles check box on the <i>Configuring SP Connection/Connection Type</i> page, choose SAML 2.0 from the Protocols list, and then click Next. Check the Browser SSO check box, and then click Next. Click Choose File on the <i>Configuring SP Connection/Import Metadata</i> page, and then navigate to the SP metadata that you exported from DMS-Admin as dms_sp_config.xml. Click Open, and then click Next THREE TIMES.

<p>Step 3 Configure SAML profile settings and IdP assertions.</p>	<ol style="list-style-type: none"> a. Click Configure Browser SSO on the <i>Configuring SP Connection/Browser SSO</i> page. b. Check the SP Initiated SSO check box on the <i>Browser SSO/SAML Profiles</i> page, and then click Next TWO TIMES. c. Click Configure Assertion Creation on the <i>Browser SSO/Assertion Creation</i> page. d. Click Transient on the <i>Assertion Creation/Identity Mapping</i> page, check the Include attributes in addition to the transient identifier check box, and then click Next. e. Set these attribute-value relationships in the Extend the Contract area on the <i>Assertion Creation/Attribute Contract</i> page. <ul style="list-style-type: none"> • SAML_AUTHN_CTX <code>urn:oasis:names:tc:SAML:2.0:attrname-format:uri</code> • UID <code>urn:oasis:names:tc:SAML:2.0:attrname-format:uri</code> f. Click Next. g. Click Map New Adapter Instance on the <i>Assertion Creation/IdP Adapter Mapping</i> page. h. Choose your appropriate authentication type and adapter instance from the next two pages. i. Click Next. The username attribute that you need next is probably part of the adapter contract. Therefore: j. Click Use only the Adapter Contract values in the SAML assertion on the <i>IdP Adapter Mapping/Assertion Mapping</i> page, and then click Next. k. On the <i>IdP Adapter Mapping/Attribute Contract Fulfillment</i> page: <ul style="list-style-type: none"> • Set the source to Text for the SAML_AUTHN_CTX attribute contract. Then, set its value to <code>urn:oasis:names:tc:SAML:2.0:ac:classes:PasswordProtectedTransport</code> • Set the source to Adapter for the UID attribute contract. Then: <ul style="list-style-type: none"> – Locate an adapter value, such as subject or userId, that maps to the username. – Set the UID attribute contract value to match the adapter value that you just found. l. Click Next > Done > Next > Done > Next.
<p>Step 4 Configure protocol settings.</p>	<ol style="list-style-type: none"> a. Click Configure Protocol Settings on the <i>Browser SSO/Protocol Settings</i> page. b. Make sure that the default binding value is set to POST on the <i>Protocol Settings/Assertion Consumer Service URL</i> page, delete all other bindings, and then click Next. c. Clear the Artifact check box on the <i>Protocol Settings/Allowable SAML Bindings</i> page, and then click Next. d. Check these check boxes on the <i>Protocol Settings/Signature Policy</i> page, and then click Next. <ul style="list-style-type: none"> • Require AuthN requests to be signed when received via the POST or Redirect bindings. • Always sign the SAML Assertion. e. Click None on the <i>Protocol Settings/Encryption Policy</i> page. f. Click Next > Done > Next > Done > Next.

Step 5	Configure credentials and their digital signatures.	<ul style="list-style-type: none"> a. Click Configure Credentials on the <i>SP Connection/Credentials</i> page. b. Click Configure on the <i>Credentials/Back-Channel Authentication</i> page. c. Check the Use Digital Signatures to guarantee payload in Browser SSO profile check box on the <i>Back-Channel Authentication/Inbound SOAP Authentication Type</i> page, and then click Next. d. Click Done on the <i>Back-Channel Authentication/Summary</i> page. e. Choose the appropriate certificate on the <i>Credentials/Digital Signature Settings</i> page, check the Include the certificate in the signature <KeyInfo> Element check box, and then click Next. f. Click Manage Signature Verification Settings... on the <i>Credentials/Signature Verification Settings</i> page. g. Click Unanchored on the <i>Signature Verification/Trust Model</i> page, and then click Next. h. Choose your DMM certificate (example: dmm.example.com) from the Primary list on the <i>Signature Verification/Signature Verification Certificate</i> page, and then click Next. <p>Note DO NOT choose any secondary certificate.</p> <p style="text-align: center;">OR</p> <p>If the Primary list does not include your DMM certificate, do the following.</p> <ul style="list-style-type: none"> 1. Click Manage Certificates on the <i>Signature Verification/Signature Verification Certificate</i> page. 2. Click Choose File on the <i>Import Certificate/Import Certificate</i> page, and then navigate to the X509 digital certificate file (*.cer) that you output from DMM. <p>Note Make sure that your certificate file includes the preamble and postscript that are mandatory for PEM-formatted certificates. The preamble and postscript look like this.</p> <pre style="margin-left: 40px;">-----BEGIN CERTIFICATE----- -----END CERTIFICATE-----</pre> <ul style="list-style-type: none"> 3. Click Open, and then click Next THREE TIMES. 4. Check the Make this the active certificate check box on the <i>Import Certificate/Summary</i> page, and then click Done. <ul style="list-style-type: none"> i. Click Done on the <i>Certificate Management/Manage Digital Verification Certificates</i> page. j. Click Next on the <i>Signature Verification/Signature Verification Certificate</i> page. k. Click Done on the <i>Signature Verification/Summary</i> page. l. Click Next on the <i>Credentials/Signature Verification Settings</i> page. m. Click Done on the <i>Credentials/Summary</i> page. n. Click Next on the <i>SP Connection</i> page.
Step 6	Activate and save the new settings.	Set the Connection Status to Active on the <i>SP Connection/Activation & Summary</i> page, and then click Save .
Step 7	Stop.	You have completed this procedure.

Export SP Metadata from DMM

Before you can use Cisco DMS in [federation](#) mode, you must export data from DMS-Admin in the form of an [SP](#) configuration file. Later, you will import this file into your [IdP](#).

Before You Begin

- Make sure that your DMM appliance is running in embedded authentication mode or LDAP mode.
- Log in to DMM as its superuser.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Security > Authentication**.

Step 3 Check the Federation check box.

Step 4 Click **Export**.

Step 5 Save the exported file to your client PC or laptop computer as **dms_sp_config.xml**.

Note See the technical documentation or tutorials for your [IdP](#) to understand how it imports [SP](#) configuration files. Alternatively, see the topic for your IdP platform in this chapter's "[IdP Configuration Examples](#)" section.

Step 6 Stop. You have completed this procedure.

Related Topics

- [Import IdP Metadata into DMM, page 8-43](#)

Import IdP Metadata into DMM

Before you can use Cisco DMS in [federation](#) mode, you must export data from your [IdP](#) in the form of an [IdP](#) configuration file. This topic explains how to use the exported file after you generate and save it.

Before You Begin

- See the technical documentation or tutorials for your [IdP](#) to understand how it exports configuration files for an [SP](#) (such as DMM) to import. Alternatively, see the topic for your IdP platform this chapter's "[IdP Configuration Examples](#)" section.

- Rename the exported IdP configuration file **idp_<type>.xml**. For example:
 - idp_*openam.xml*
 - idp_*shibboleth.xml*
 - idp_*pingfederate.xml*
- Make sure that your DMM appliance is running in embedded authentication mode or LDAP mode.
- Log in to DMM as its superuser.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Security > Authentication**.

Step 3 Click **Federation** to choose it as your authentication mode.

Step 4 Click **Import**.

Step 5 Choose and upload the IdP file (**idp_<type>.xml**) that you saved previously.

Step 6 Enter the necessary **LDAP** information to use your **Active Directory** server.

Step 7 Stop. You have completed this procedure.

Bypass External Authentication During Superuser Login, as Needed

Your DMM server features a special login form, **which rejects every username except *superuser***. You use this special form whenever Cisco DMS runs in [federation](#) mode or an error has prevented migration from one authentication mode to another.

Procedure

- Step 1** Go to **http://<FQDN>:8080/dmsadmin/admin/login**.
- Enter **superuser** in the Username field.
 - Enter the corresponding password in the Password field.
 - Click **Log In**.

The screenshot shows a login form with two input fields: 'Username:' containing 'superuser' and 'Password:' containing masked characters. Below the fields is a 'Log In' button. At the bottom of the form, there is a link that reads 'Forgot your username or password? Contact your administrator.'

- Step 2** Stop. You have completed this procedure.
-

Elements to Choose and Enable an Authentication Mode

Navigation Path

Administration > Security > Authentication > Select Mode

Table 8-1 Elements for Authentication Modes

Element	Description
Authentication Mode Area	
Embedded	Requires users who log in to DMM to authenticate against a user account database that is native to DMM. This database is independent of every other type of authentication that you might use in your network.
LDAP	Automatically deletes all user accounts except <i>superuser</i> . Requires future users to authenticate against the user account data from your Active Directory server when they log in to DMM. Microsoft Active Directory is the only LDAP implementation that we support in this release.
Federation	Automatically deletes all user accounts except <i>superuser</i> . Requires future users to authenticate themselves to your IdP when they log in to DMM.
Federation Mode Elements Area	
Last Successfully Configured IdP	This value becomes populated for the first time after you succeed at least once in importing configuration metadata into DMM from your IdP . This element is visible in federation mode only.
IdP Configuration File	Provides the means to import configuration metadata that you previously exported from your IdP and saved to a file. Click Import to browse for the file, which you can then import. This element is visible in federation mode only.
Last Configured IdP	(CSCtn15472) While it names an IdP explicitly, this value does not necessarily identify the IdP in current use. Instead, this value describes only your most recent <i>attempt</i> to import configuration metadata from an IdP , without regard for whether the attempt failed or succeeded. This element is visible only in federation mode. It becomes populated for the first time after you attempt at least once to import IdP metadata. Tip Compare this value to the “Last Successfully Configured IdP” value. When they differ, you know that your latest such attempt actually failed.
(SP Configuration File) Export	Provides the means to export configuration metadata from DMM. Click Export to begin browsing for a folder on a locally mounted drive where you can save the exported config file. Later, you will import this file into your IdP . This element is visible in federation mode only.
Enable Authentication Test	Helps you to test whether your federation mode settings are correct and will allow SSO for your ordinary users. Check this check box to expose UI elements that are otherwise hidden. Clear this check box to hide such elements.
Test Username	Enter a username that your IdP already knows. Do not use the “superuser” username. This element is visible only while the Enable Authentication Test check box is checked.

Table 8-1 Elements for Authentication Modes (continued)

Element	Description
Test User Password	Enter the password that corresponds to the test username. This element is visible only while the Enable Authentication Test check box is checked.
LDAP Configuration Area	
Anonymous	<p>Enables or disables an anonymous connection between your DMM appliance and your Active Directory server.</p> <ul style="list-style-type: none"> An anonymous connection is suitable when you want to see or use <i>public</i> information on the Active Directory server. In contrast, when you want to see or use <i>privileged</i> information on your Active Directory server, the server will require you to enter login credentials to prove that you have sufficient access rights. <p>In the latter case, your Active Directory server will reject any attempt to log in anonymously. This check box is available to you only when you choose LDAP mode or federation mode.</p>
Host	Enter the routable IP address or DNS-resolvable hostname for the Active Directory server. This field is available to you only when you choose LDAP mode or federation mode.
Port	<p>Enter the TCP port number that your Active Directory server uses for communications. This field is available to you only after you choose LDAP mode or federation mode.</p> <p>The Active Directory port number by default is:</p> <ul style="list-style-type: none"> 389 for LDAP communications. 636 for LDAPS (<i>Secure LDAP</i>, or <i>LDAP over SSL</i>) and SSO communications.
Administrator DN	<p>Enter the distinguished name of the Active Directory server administrator.</p> <p>This field is available to you only after you choose LDAP mode or federation mode and uncheck the Anonymous check box.</p> <p>Tip See administrator DN, page 8-3.</p>
Password	<p>Enter the password that is associated with the Administrator DN.</p> <p>This field is available to you only after you choose LDAP mode or federation mode and uncheck the Anonymous check box.</p>
Use SSL Encryption	<p>The check box to enable or disable encrypted sign-on. This check box is available to you only when you use LDAP mode or federation mode.</p> <p>Note Whenever you enable SSL or install a new SSL certificate for LDAP, you must restart Web Services (Tomcat) from AAI. Otherwise, LDAP users cannot log in and the new (or newly enabled) SSL certificate cannot take effect. Also—if your DMM server is one half of a failover pair—the Tomcat restart will trigger immediate failover. (CSCtI09696)</p> <ul style="list-style-type: none"> Check the check box to enable encryption. Uncheck it to disable encryption. <p>Enabling SSL causes the connections between your DMM appliance and your Active Directory server to use LDAPS. An LDAPS connection is suitable when you want to prevent untrusted third parties from reading credentials that the servers exchange.</p>
Active Directory Certificate File	Helps you to upload the digital certificate that your Active Directory server uses for LDAPS communications. This field is available to you only while the Use SSL Encryption check box is checked.

Table 8-1 Elements for Authentication Modes (continued)

Element	Description
Command Buttons	
Update	Saves and applies your work on the Authentication Mode property sheet.
Cancel	Discards your work on the Authentication Mode property sheet and resets all values to their previous configuration.

Element	Description
Description	Enter a human-readable description for the filter.
User Base DN	Enter the distinguished name of the Active Directory user base that you will search.
User Filter	Enter a user filter to limit the number of matching user accounts to import from the user base that you specified.
User Group (in DMM)	Choose or create a user group to associate with the filter. At the very least, the list includes these options. <ul style="list-style-type: none"> • All Users Group • Create a New User Group • Digital Signage Users

Command Buttons

Add	Adds the filter, exactly as entered, without first validating it.
Validate	Validates the filter to confirm, before you add it, that it will return meaningful results.
Clear	Clears all entries from the Define Filters property sheet.

Elements to Use LDAP Bookmarks for Synchronization

Navigation Path

Administration > Security > Authentication > Synchronize Users

Table 8-3 Elements for Bookmarks

Element	Description
LDAP Bookmarks property sheet	
Synchronization	<p>One of the following types.</p> <ul style="list-style-type: none"> • Initial • Update • Overwrite • Delete <p>Note When you click Delete on the LDAP Bookmarks sub-tab, we ask you whether to delete groups and policies. When you choose Yes, we delete all of the following from Cisco DMS.</p> <ul style="list-style-type: none"> • All user accounts that match the filter. • The particular user group that is associated to the filter. • All access policies associated to the particular user group. <p>The deletion process can take as long as 1 minute to finish. (CSCtn22370)</p>
Command Buttons	
Update	Submits your selections for the type of synchronization and the scope of access that you chose and configured. Synchronization of the specified type starts immediately.
Cancel	Resets all entries to their previous values on the LDAP Bookmarks property sheet. <ul style="list-style-type: none"> • Discards all changes to the configuration of behaviors for synchronizations. • Discards all changes to the scope of access.

Elements to Schedule Synchronization

Navigation Path

Administration > Security > Authentication > Synchronize Users

Table 8-4 *Elements for Scheduling*

Element	Description
Scheduling property sheet	
Synchronization Mode	Enables one synchronization mode to receive updated user account information from an Active Directory server. We support two such modes but they are mutually exclusive. Whenever you enable one, you disable the other. Click either Manual Synchronization or Automatic Synchronization .
Command Buttons	
Update	Submits your selections for the type of synchronization and the scope of access that you chose and configured. Synchronization of the specified type starts immediately.
Cancel	Resets all entries to their previous values on the Scheduling property sheet. <ul style="list-style-type: none"> Discards all changes to the configuration of behaviors for synchronizations. Discards all changes to the scope of access.

Elements to Manage Attributes

Navigation Path

Administration > Security > Authentication > Manage Attributes

Table 8-5 Elements for Attributes Management

Element	Description
DMM Attribute Name	Values that DMS-Admin uses to describe and identify various attributes that it associates with each user account. You cannot change the values in this column. They are for your reference only, to help you enter suitable values (and recognize suitable values when you see them) in the LDAP Attribute Name column and the Values to Use by Default column.
LDAP Attribute Name	Values that your Active Directory server uses—which correspond one-to-one with values in the DMM Attribute Row column—to describe and identify attributes of each user account. In its factory-default configuration, DMS-Admin prepopulates all fields in this column with the most commonplace values that Active Directory servers use for this purpose. When the values for these attributes differ on your Active Directory server or when you prefer to import objects that use other Active Directory attributes, you can edit the values in this column.
Values to Use by Default	<p>Enter text to insert automatically when the value is blank for the corresponding attribute in an Active Directory user account that you import or synchronize. To ensure that DMS-Admin imports each valid user account that matches a filter, we recommend that you enter values for these attributes:</p> <ul style="list-style-type: none"> • First Name • Last Name <p>For your convenience, you can also enter values to insert automatically when the values are blank for other attributes—such as Company, Department, or Phone Number—but this is optional.</p> <p>Note You cannot enter a value to use by default as the Login User Name value.</p>
Ignore User Account Control Flags	Tells DMM to ignore whether your Active Directory server makes use of the User Account Control Flags attribute. DMM expects to find this attribute on your Active Directory server and, when the attribute is not present, authentication fails.

Command Buttons

Reset to Factory Default	Returns all values in the LDAP Attribute Name column to the most commonplace values that Active Directory servers use. If you entered different values manually because the labels for these attributes differ on your Active Directory server or because you prefer to import user accounts that use other Active Directory attributes, DMS-Admin deletes what you entered.
Update	Saves and applies your work in the Manage Attributes property sheet.

FAQs and Troubleshooting

- [FAQs, page 8-59](#)

FAQs

- [LDAP \(Active Directory\) FAQs, page 8-59](#)
- [Federation Mode \(SSO\) FAQs, page 8-60](#)
- [Error Message FAQs, page 8-60](#)
- [Network Policy FAQs, page 8-61](#)
- [User Exclusion FAQs, page 8-61](#)

LDAP (Active Directory) FAQs

- Q.** Which Active Directory releases does Cisco DMS support?
- A.** Our completed tests succeeded as follows.

Windows Active Directory Server 2000

- Cisco DMS 5.3

Windows Active Directory Server 2003

- Cisco DMS 5.3

Windows Active Directory Server 2008R2

- Cisco DMS 5.3

Federation Mode (SSO) FAQs

- Q.** Are there any special APIs to use federation mode?
- A.** No. We support one set of API calls that work identically across all supported authentication modes. See <http://developer.cisco.com>.
- Q.** Does DMM perform trust validation of certificates that it imports with IdP metadata?
- A.** Yes.
- Q.** Do you support any use of certificate revocation lists?
- A.** No. Not in this release.
- Q.** Can I use one browser to connect simultaneously to more than one DMM appliance?
- A.** No. Each time that you connect to an additional instance, you are logged out of any prior instance in that browser. However, you can use multiple browsers together for this purpose.
- Q.** Why would user sessions time out for DMM users after a different interval than I set in DMM?
- A.** This can happen when session timeout values differ between your DMM appliance and your IdP. Reconfigure these servers to share one identical session timeout value.

Error Message FAQs

- Q.** Why does an error message state that an Active Directory password is not valid?

Explanation A “User must change password at next login” flag might be set on your Active Directory server. While this flag is set, the affected user cannot log in to any Cisco DMS component. DMS-Admin cannot change any password on your Active Directory server.

Recommended Action Use features that your Active Directory server provides for this purpose.

- Q.** Why does an error message state that filter validation has failed?

Explanation Filters fail when they point to empty containers. They also fail in response to filter expressions that includes any spaces.

Recommended Action Make sure on your Active Directory server that your filter did not refer to an empty organizational unit (OU) container. **Confirm also that your filter expression does not contain even one space.**

- Q.** Why would my API calls receive an HTTP 401 Unauthorized error?

Recommended Action When you use federation mode, enable ECP on your IdP server.

Network Policy FAQs

- Q.** When I use LDAP authentication with Cisco DMS, which ports must remain open in my network?
- A.** Your DMM appliance accepts user authentication requests securely through **port 443**. DMM then passes these requests securely to your [Active Directory](#) server through **port 389**. Also, SSL uses **port 636**.

User Exclusion FAQs

- Q.** Can I block Cisco DMS access to one particular [Active Directory](#) user account, when it is among the matched results for an otherwise useful LDAP filter?
- A.** Yes. Extend your query to include a logical NOT (!) operator for an attribute whose value is unique to this user. This example uses the LDAP “`samAccountName`” attribute name, which DMM uses by default to populate the corresponding login name for DMM. However, if your [Active Directory](#) server uses any other attribute name than “`samAccountName`” for this purpose, you must update the example syntax accordingly when you extend your query.

```
(&(currentFilter) (samAccountName!=username-to-be-excluded))
```

Tip

Information on the **Manage Attributes** property sheet in **DMS-Admin** confirms whether your [Active Directory](#) server uses the “`samAccountName`” attribute name.

User Group Assignments

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 9-1](#)
- [Procedures, page 9-2](#)
- [Reference, page 9-10](#)

We prepared this material with specific expectations of you.

- ✓ You manage user group assignments for Cisco DMS.
-

Concepts

- [Understand User Accounts, page 9-1](#)
- [Understand User Roles, page 9-2](#)

Understand User Accounts

You can create user accounts manually or you can import them from an Active Directory server. Imported accounts and created accounts can coexist.

You cannot create any new user accounts manually while your authentication method is LDAP.

Understand User Roles

User roles in DMS-Admin are the automatic result of a logical operation. You cannot use DMS-Admin to assign a user role directly to any user.

In some cases, users who are authorized to use more than one licensed feature of Cisco DMS. The DMS-Admin user role that you see for a user account is based on *all* privileges and access settings that the user has, combined across *all* of your licensed and activated features.

Table 9-1 Logic That Determines User Role Designations in DMS-Admin

User Role	Logic
Admin	This user role is assigned automatically to any user who is an administrator in any DMM software module. These users have full read/write access to all users and user groups in DMS-Admin and can manage settings for them.
ReadOnly	<div style="border: 1px solid black; padding: 5px; margin-bottom: 5px;">  <p>Caution Each user account has only the user role “ReadOnly” until you assign additional access rights and privileges. User accounts with this role have severely limited access.</p> </div> <p>This user role in DMS-Admin is assigned automatically to any user who has not been granted any explicit access settings or privileges in any DMM software module. These users are prevented from logging in to any DMM software module.</p>

Procedures

- [Create User Groups, page 9-3](#)
- [Delete User Groups, page 9-4](#)
- [Create User Accounts Manually, page 9-4](#)
- [Assign Users to User Groups, page 9-6](#)
- [Edit User Accounts Manually, page 9-7](#)
- [Delete User Accounts Manually, page 9-8](#)
- [Remove Users from a User Group, page 9-9](#)
- [Manage User Access Rights to DMPs, page 9-10](#)

Create User Groups

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Click **Users**.

Step 3 Click **Create Group**.

A dialog box titled 'Create Group' with a blue header. It contains two text input fields: 'Group Name:' and 'Group Description:'. Below the fields are two buttons: a blue 'Save' button and a grey 'Cancel' button.

Step 4 Enter values to name and describe the group.

Step 5 Click **Save** to save your work.

Step 6 Stop. You have completed this procedure.

Delete User Groups

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Click **Users**.

Step 3 Click a group name to highlight it.

Step 4 Choose **Options > Delete Group**.

Step 5 Click **Yes** in the Delete Confirmation dialog box.

Step 6 Stop. You have completed this procedure.

Create User Accounts Manually

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Click **Users**.

Step 3 Click **Add New User**.

Step 4 Enter required values in the Add New User dialog box.

Step 5 (Optional) Enter contact information.

Step 6 (Optional) Assign the user to a user group.

Groups	Description
<input checked="" type="checkbox"/> Digital Signage Users	Digital Signage Users

Step 7 Click **Save**.

Step 8 Stop. You have completed this procedure.

Related Topics

Assign Users to User Groups

When you first create a user account in DMS-Admin, you can associate the account with a user group immediately or you can do so after you assign access rights and permissions to the user.

Before You Begin

- Log in to DMM.

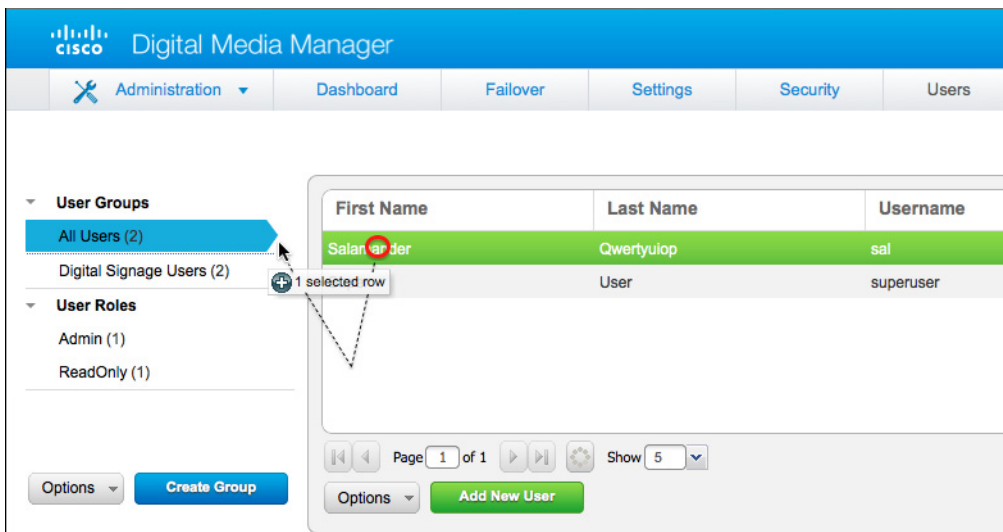

Procedure

Step 1 Click **Administration**.

Step 2 Click **Users**.

Step 3 Drag a user from the table to the group name.

OR

Use the “Optional group selection” elements in the Edit User dialog box.

Step 4 Stop. You have completed this procedure.

Delete User Accounts Manually

Note

You cannot delete the superuser account. However, you can delete any other user account.

Before You Begin

- Log in to DMM.
- Create user accounts.

Procedure

Step 1 Click **Administration**.

The screenshot shows a navigation menu with four options: Network and Endpoints, Content Management, Reports, and Administration. The Administration option, represented by a wrench and screwdriver icon, is highlighted with a red rectangular box.

Network and Endpoints	Content Management	Reports	Administration
Populate and manage endpoint inventory. Control user access to endpoints. Configure endpoint use of content distribution services and offsite storage.	Organize media for Digital Signs. Create Channels of programming that endpoints play. Oversee the schedule for playback. Manage IPTV service subscriptions and packaging.	Plan and design campaigns. Measure campaign reach. Prove which endpoints took part in a campaign.	Manage DMM user accounts and authentication settings, administer your DMM licenses, and perform other routine administrative tasks.

Step 2 Click **Users**.

Step 3 Click an entry in the user accounts table.

**Tip****Use a modifier key to mark multiple table rows simultaneously.**

- Press **Shift** to mark a range of neighboring table rows.
- Press **Ctrl** (in Windows only) to mark table rows that don't touch.
- Press **Command** (in Mac OS X only) to mark table rows that don't touch.

Step 4 Choose **Options > Delete User**.

Step 5 Stop. You have completed this procedure.

Table 9-2 *Elements for Creating and Editing User Accounts Manually*

Element	Description
First Name	This required value might be identical for multiple users. Note We do not validate that this value is strictly alphanumeric. Specifically, we support your use of opening and closing quotation marks, forward slashes, and back slashes.
Last Name	This required value might also be identical for multiple users. Note We do not validate that this value is strictly alphanumeric. Specifically, we support your use of opening and closing quotation marks, forward slashes, and back slashes.
Email Address	The email address to be associated with this user account.
Username	A unique username. The name is unique in the sense that you have not used it as the name for any other user account for any component of Cisco DMS. Usernames are case-insensitive. The minimum length is 2 characters. You must enter the username.

Table 9-2 Elements for Creating and Editing User Accounts Manually (continued)

Element	Description
Password	The password for the user account. You must enter a password, and then reenter it.
Re-enter password	
Active list	Signifies whether the account holder is an active or inactive user of Cisco DMS. Alternatively, signifies whether the account holder is active in your organization.
Optional Contact Info	
Company	The agency, corporation, nonprofit organization, or other such institution to be associated with this user account.
Department	The department within the institution.
Phone	The telephone number to be associated with this user account.
Optional Group Selection	
Unlabeled check box	Marks the groups to which this user should belong.
Groups column	Shows the group name.
Description column	Optional, brief description of the group and its purpose.

FAQs and Troubleshooting

- [FAQs, page 9-11](#)

FAQs

- Q.** What might prevent a user from logging in to DMM with an account that I created in DMS-Admin?
- A.** By default, DMS-Admin assigns all newly created user accounts to a user role called “ReadOnly.” Users with this role cannot log in to DMM. To grant this right to users, you must assign module-specific rights to them in *Digital Signs*. Afterward, their user role changes to “Admin.”

CHAPTER 10

SNMP, Events, and Notifications

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 10-1](#)
- [Procedures, page 10-4](#)
- [Reference, page 10-9](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You monitor system events for components of Cisco DMS..
-

Concepts

- [Overview, page 10-1](#)
- [Restrictions, page 10-2](#)
- [Understand SNMP Concepts, page 10-2](#)
- [Understand MIB and NMS Concepts, page 10-2](#)
- [Understand IP Address Conflict Events, page 10-3](#)
- [Understand Supported Event Types, page 10-3](#)
- [Understand Notification Methods, page 10-4](#)
- [Workflow, page 10-4](#)

Overview

DMS-Admin supports email (SMTP) natively.

In addition, you can purchase and install a license key to activate our *SNMP Notifications Module*. After you activate this module, you can start to use:

- A network management MIB file called *CISCO-DIGITAL-MEDIA-SYSTEMS-MIB.my*.
- The *agent capabilities* file that describes which MIB objects we support in this release.

In this framework, you can define alarms that associate system events with methods to deliver notification messages.

**Timesaver**

The Alerts gauge at Administration > Dashboard shows the total count of notification messages delivered in the past 1 hour. Click **View Alerts** to jump directly to the Alerts page.

Restrictions

- **SNMP features in this release are read-only.**
 - Your NMS can use SNMP to submit queries to DMS-Admin but cannot use SNMP to edit the configuration of any Cisco DMS component.
 - You cannot edit the (default) community string of your DMM appliance.
- **SNMPv1 and SNMPv2c are not secure protocols.** You cannot use a firewall to secure SNMP traffic.
- In this release, the SNMP Notification Module does not support the SNMPv3 protocol.

Understand SNMP Concepts

Your fully licensed and equipped DMS-Admin software can use *SNMPv1* or *SNMPv2c* to:

- Respond to Cisco DMS MIB schema-compliant queries from your NMS.
- Send notification messages automatically to your NMS whenever predefined system event types occur.

Understand MIB and NMS Concepts

Any dedicated NMS that supports SNMP can load *CISCO-DIGITAL-MEDIA-SYSTEMS-MIB.my* into its MIB browser. CiscoWorks is one example. Your NMS can then send SNMP queries to DMS-Admin and represent its responses correctly to monitor objects from our MIB schema.

- Cisco DMS server appliances.
- Cisco DMPs—in the sense that, when your DMPs report their events to your DMM appliance, it forwards the appropriate SNMP alerts.
- Cisco Digital Media Manager software.

Our MIB schema models three object groups.

Object Group	Description
DMS Systems Group	Models all distributed component parts of this Cisco DMS installation as a single, abstract system.
DMS Features Group	Categorizes licensed and unlicensed features.
DMS Inventory Group	Lists the devices that constitute your Cisco DMS installation and describes their operational status.

Understand IP Address Conflict Events

An address conflict occurs when a DHCP server assigns to one registered DMP the exact dynamic IP address that some other registered DMP used previously.

- When the DMP that previously used the address is no longer in active use, you should delete the record of it in *Digital Signs*.
- When the DMP that previously used the address is one that should remain active, confirm that it is still running and still connected to the network. Then, restart it and confirm that its DHCP server does not assign IP addresses with expiration dates.

Understand Supported Event Types

- [Global Event Categories, page 10-3](#)
- [DMP Event Categories, page 10-3](#)
- [Failover Cluster Event Categories, page 10-4](#)
- [WAAS Event Categories, page 10-4](#)

Global Event Categories

Categories	Notification Messages
All Internal Events	List all signals exchanged between and among the internal components of Cisco DMS. Most users attribute little or no significance to these events.
All Notifiable Events	List all.
Deployment Failures	Messages list recently failed deployments of content for all components of Cisco DMS.
Deployment Successes	Messages list recently failed deployments of content for all components of Cisco DMS.

DMP Event Categories

Categories	Notification Messages
Outages	List all registered but unreachable DMPs.
Restarts	List all registered DMPs that restarted recently.
IP Conflicts	List all registered DMPs with IP address conflicts.
IP Registrations	List all newly registered DMPs.

Failover Cluster Event Categories

Categories	Notification Messages
Cluster Node Outages	List instances when either node in any failover pair is not responsive.
Cluster Node Activations	List instances when either node in any failover pair becomes responsive.

WAAS Event Categories

Categories	Notification Messages
WAAS Connections	Lists instances when DMM established a connection to a WAAS share.
WAAS Disconnections	Lists instances when DMM lost its connection to a WAAS share.
WAAS Low Disk Space	Lists instances when the WAAS share was low on disk space.

Understand Notification Methods

Email

Activates automatic delivery of email notification messages for all corresponding event types.

SNMP

Activates automatic delivery of SNMPv2c notification messages to your NMS for all corresponding event types.

Syslog

Activates automatic delivery of notification messages to your Syslog collector.

All

All of the above.

Workflow

1. [Configure SNMP Server Settings for Your DMM Appliance, page 10-6](#)
2. [Populate the MIB Browser in Your NMS, page 10-6](#)

Procedures

- [Enable or Disable Email, page 10-5](#)
- [Configure Alert Reports and Notification Settings, page 10-7](#)

Enable or Disable Email

You can enable or disable the email service (SMTP) on your DMM appliance. When this service is enabled, DMS-Admin can send email notifications automatically to you or other interested parties whenever system events of predefined types occur.

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Settings > External Servers > SMTP**.

Step 3 Enter the required values to start or stop email service on your DMM appliance.

You must enter these values or you cannot send notification messages:

Value	Description
Notification Operations	Click the radio button to enable or disable the SMTP service.
Hostname or IP address	The globally routable IP address or DNS-resolvable hostname of your DMM appliance.
Port	The number to identify which TCP port is reserved for SMTP traffic. The standard port assignment is :25.
From	The email address, root@<FQDN> , where <i>FQDN</i> is the globally
BCC	DNS-resolvable FQDN of your DMM appliance.

Step 4 Click **Save**.

Step 5 Stop. You have completed this procedure.

Configure SNMP Server Settings for Your DMM Appliance

Cisco DMS can convey its notifications to an external SNMP server.

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Settings > SNMP**.

Step 3 Click the Server Status radio button to enable or disable SNMP monitoring.

Step 4 Enter in the Host field the routable IP address or DNS-resolvable hostname of your NMS.

Step 5 Enter in the Port field the numeric UDP port assignment reserved for SNMP traffic.

Step 6 Apply the community string.

Step 7 Enter in the Community String field the password to identify that community.

Tip The default Community String value is *public*.

Step 8 Click **Save**.

Step 9 Stop. You have completed this procedure.

Populate the MIB Browser in Your NMS

Procedure

Step 1 Log in to your Cisco.com account on ftp.cisco.com.

Step 2 Navigate to <ftp://ftp-sj.cisco.com/pub/mibs/v2/>.

Timesaver

Alternatively, go to <http://cisco.com/go/dms/mib>.

Step 3 Download these files:

09/23/2008 12:00AM	2,392	CISCO-DIGITAL-MEDIA-SYSTEMS-CAPABILITY.my
06/02/2008 12:00AM	43,053	CISCO-DIGITAL-MEDIA-SYSTEMS-MIB.my

Step 4 Load both files into your network management system (NMS).

**Tip**

Manufacturer documentation for your NMS should tell you how to do this.

- Step 5** When your NMS prompts you to enter the SNMP port number for your DMM appliance, use the port number **:161**.
- Step 6** Stop. You have completed this procedure.

Configure Alert Reports and Notification Settings

- [Define Alert Report Parameters, page 10-7](#)
- [Define Notification Rules, page 10-8](#)

Define Alert Report Parameters

Before You Begin

- Log in to DMM.

Procedure

- Step 1** Click **Administration**.

- Step 2** Click **Alerts**.
- Step 3** Click **Alert Reports**.
- Step 4** Click the radio button to choose a monitoring mode.
- In *Live Monitor Mode*, we refresh displayed values in almost-real time.
 - In *Snapshot Mode*, we do not refresh displayed values.
- Step 5** Choose the range of dates.
- Step 6** Choose an event type from the Type list, and then click **Apply**.
- Step 7** Click **Save**.
- Step 8** Stop. You have completed this procedure.

Define Notification Rules

Before You Begin

- Log in to DMM.
- Each target type imposes its own preconditions, as follows, for the delivery of notification messages.

Email You must:

- Configure SMTP.
- Enable notification operations for SMTP.

NMS You must:

- Purchase and install a license key that activates the SNMP Notification Module.
- Configure SNMP.
- Enable notification operations and query operations for SNMP.

Syslog You must:

- Configure Syslog.
- Enable notification operations for Syslog.

Procedure

Step 1 Click Administration.

Step 2 Choose Alerts > Notification Rules.

Step 3 Check the check boxes to turn On one or more notification methods for each listed event type.

OR

Uncheck every check box for an event type to stop its delivery of notification messages through any medium or channel.

Step 4 (Optional) Did you check Email?

If so, you activated the Recipient field, which is now editable. Enter the email address that should receive notification messages.

Note Enter only one email address in this field. It rejects any entry that contains multiple email addresses (CSCts96411).

Tip You can enter a unique recipient address for each notification rule.

- Step 5** Click **Save**.
- Step 6** Stop. You have completed this procedure.

Reference

- [FAQs and Troubleshooting, page 10-9](#)

FAQs and Troubleshooting

- [FAQs, page 10-9](#)

FAQs

- [SMTP FAQs, page 10-9](#)
- [SNMP and MIB FAQs, page 10-9](#)

SMTP FAQs

- Q.** What might interfere with the delivery of configured email notifications for events that the Alert Browser shows?

Explanation This might happen when DMM cannot connect to your SMTP server—due to either a misconfiguration or a service outage (SMTP error 421). To determine the cause, get copies of your DMM system logs from AAI and inspect `/var/log/dms/EmsService.log` file.

Recommended Action Make sure the SMTP server configuration is correct in DMS-Admin. If the configuration is correct, test with a different mail server.

SNMP and MIB FAQs

- Q.** Which SNMP versions does the MIB support?
- A.** The MIB supports *SNMPv1* and *SNMPv2* in this release.

Note This release does not support *SNMPv3*.

- Q.** If multiple DMPs become unreachable at the same time, will I receive separate SNMP notifications for each?
- A.** Maybe. This can occur when you configure DMS-Admin to send SNMP notifications for unreachable DMPs.

Note This release does not support notification throttling.

Q. Where can I download the MIB and its agent capabilities file?

A. Log in to your Cisco.com account and go to <ftp://ftp.cisco.com/pub/mibs/v2/>. Alternatively, go to <http://cisco.com/go/dms/mib>.

Q. Which object groups does the MIB support?

A. This release supports:

- *cdmsSystem*
- *cdmsFeatures*
- *cdmsInventory*

To understand these object groups, see the agent capabilities file.

Q. Can I configure the community for my SNMP agent to accept 'get' requests?

A. Yes, from the public community.

Q. Can I configure the community for my SNMP agent to accept 'set' requests?

A. No, not in this release.

Q. Can I configure the community for my external SNMP server, which receives traps?

A. No, not in this release.

Network and Endpoints Overview

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 11-1](#)
- [Procedures, page 11-2](#)

We prepared this material with specific expectations of you.

- ✓ You manage the server and endpoint settings that make a digital signage network possible.

Concepts

- [Overview, page 11-1](#)

Overview

 Network and Endpoints Populate and manage endpoint inventory. Control user access to endpoints. Configure endpoint use of content distribution services and offsite storage.	 Content Management Organize media for Digital Signs. Create Channels of programming that endpoints play. Oversee the schedule for playback. Manage IPTV service subscriptions and packaging.	 Reports Plan and design campaigns. Measure campaign reach. Prove which endpoints took part in a campaign.	 Administration Manage DMM user accounts and authentication settings, administer your DMM licenses, and perform other routine administrative tasks.
---	---	--	---

DMM features in the Network and Endpoints section help you to:

- Discover, control, and monitor the DMPs in your network.
- Authenticate DMM to DMPs.
- Limit user access to DMPs.
- Store and distribute content for digital signs.
- Declare and manage public emergencies near digital signs.
- Control low-level device settings.
- Run digital signage services in Apache Tomcat.

Procedures

- [View Network and Endpoint Options in DMM, page 11-2](#)

View Network and Endpoint Options in DMM

Procedure

Step 1 Point a supported browser at your DMM appliance.

- When you use **HTTP**, be sure to specify port **8080**.
- When you use **HTTPS**, be sure to specify port **8443**.
- Always use the fully qualified device name (FQDN), not the IP address.

For example, **https://dmm.example.com:8443**

Step 2 Click **Network and Endpoints**.

Step 3 Stop. You have completed this procedure.

Tip

Check [Release Notes for Cisco Digital Media Suite 5.4.x](#) on [Cisco.com](#) for a list of supported browsers.

Register DMPs

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 12-1](#)
- [Procedures, page 12-13](#)
- [Reference, page 12-23](#)

Audience

We prepared this material with specific expectations of you.

- ✓ **Everyone**—You understand IP addresses, subnets, and other LAN fundamentals.
- ✓ **Everyone**—Your user account permissions allow you to manage DMPs.
- ✓ **Medianet Users**—You understand Medianet fundamentals and have hands-on experience in its configuration and use. Or, because you lack this specialization, you will study technical materials on Cisco.com as needed.

Concepts

- [Overview, page 12-1](#)
- [Glossary, page 12-2](#)
- [Restrictions, page 12-10](#)
- [Guidelines, page 12-11](#)
- [Understand the Sequence of Operations for Non-Medianet Autoregistration, page 12-12](#)

Overview

Before you can start to manage DMPs centrally, you must register them with DMM. You can automate this process or run it manually for one DMP at a time.

- Cisco DMS-native autoregistration finds every DMP in the subnets that you specify. Then, it configures these DMPs to recognize and trust your DMM appliance. It restarts the DMPs and then registers them in DMM for centralized management.
- Medianet autoregistration finds any DMP automatically when you attach it to a Medianet-ready switch in your Enterprise. This method optimizes the switch port for rich media delivery, and then registers the DMP in DMM for centralized management.

Glossary

Timesaver

Go to terms that start with... [[A](#) | [C](#) | [D](#) | [L](#) | [M](#)].

A

additional-location-information

One of two essential [Location Services](#) values that must be configured on your Medianet-enabled switch. The “*civic-location-id*” value and the “*additional-location-information*” value are encapsulated into a CDP message that endpoints receive.

This value describes any non-default details to inject into the encapsulated [CDP](#) message. As this is a data injection, it depends wholly on the presence of a defined *civic-location-id* value. Absent **that** value, there is no way for **this** value to reach any endpoint (CSCti85043). Later, when you plug a Medianet-ready DMP into a properly configured switch, the [Location Services](#) feature of [MSI](#) populates the Location URL field automatically in DMPDM.

Medianet Services	
MediaNet Enabled	On
Timeout (ms)	30000
Switch IP Address	172.26.135.162
Switch Name	me-w-austin-3.me.com
Switch Port	GigabitEthernet1/0/12
VLAN	282
Location ID	
Location URL	34=Research_Bldg828=Broken_Spoke&27=2&25=2&24=33301&19=12515&3=Austin&1=Texas

autoregistration

See [MSI registration service](#).

Auto Smartports¹

A collection of interface-level switch commands bundled together as a macro that configures a switchport without human intervention. Upon detecting a connection to one of its physical interfaces (or “ports”), a [Medianet](#)-ready switch uses [CDP](#) packets or a similar mechanism²—in tandem with a *port-based network access control* (PNAC) standard such as 802.1x/MAB—to learn what type of device has connected to it. Device identification triggers the appropriate Auto Smartports macro to run automatically on the switch and configure its interface appropriately for the detected device type. This behavior eases the administrative burden of configuring multiple switchports manually. (Similarly, when there is a “link-down” event on the port, the switch removes the macro.) In the ITU model and framework for network management, known as *FCAPS*, Auto Smartports macros act in support of what’s called *configuration management*.

See *Auto Smartports Configuration Guide, Release 12.2(58)SE* at

http://cisco.com/en/US/docs/switches/lan/auto_smartports/12.2_58_se/configuration/guide/aspcg.html.

1. Infrequently abbreviated as *ASP*.
2. Such as Link-Level Discovery Protocol (LLDP) packets, packets that include specific MAC addresses or Organizational Unique Identifiers (OUIs), or attribute-value pairs within a RADIUS response.

C

↑ [Return to Top](#)

CDP

Cisco Discovery Protocol. DMPs and other devices that support CDP can communicate facts about themselves, amongst themselves, over any physical network medium that supports *Subnetwork Access Protocol* (SNAP) encapsulation. CDP uses the *data link layer*, which connects physical network media to upper-layer protocols. And because CDP operates at this level, two or more CDP devices that support different network layer protocols (for example, IP and *Novell IPX*) can learn about each other.

Specifically, CDP causes devices to advertise not only their existence, but also their platform types, protocols, IP addresses, and SNMP-agent addresses to neighboring devices on their LAN switch or WAN. And when their connected switch is Medianet-ready, device identification can also trigger an [Auto Smartports](#) macro to run automatically.

Thus, CDP facilitates discovery—by network management applications—of Cisco devices that are neighbors of known devices. And this is particularly useful when such previously undiscovered neighbors use lower-layer, transparent protocols. After they possess information about such devices, network management applications can send SNMP queries to them.

In addition, CDP detects native VLAN and port duplex mismatches.

civic-location-id

One of two essential [Location Services](#) values that must be configured on your Medianet-enabled switch. The “*civic-location-id*” value and the “*additional-location-information*” value are encapsulated into a CDP message that endpoints receive.

This value describes the physical site—including the municipality, street address, floor designation, and so on—where a switch and its attached nodes are deployed.

D

↑ [Return to Top](#)

DHCP

Dynamic Host Configuration Protocol. A standard method for devices to request, and servers to allocate, IP addresses in a network without human intervention.

DHCP option 125

An optional [DHCP](#) relay class that:

- Injects “vendor-identifying, vendor-specific information” into the request (within a DHCP DISCOVER message) to receive a dynamic IP address.
- Identifies the type of client sending the DHCP DISCOVER message.

In turn, a DHCP server that is configured to support Option 125 can relay the client-generated request to some other DHCP server. This mechanism allows an organization to designate [DHCP](#) servers for clients that meet particular criteria. For example, you might want all of your DMPs to receive their IP addresses from a [DHCP](#) server that you reserve for this purpose exclusively.

L

[↑ Return to Top](#)

Location Services

Mechanism by which a device can learn its actual physical (“civic”) location through its connection to a Medianet-ready switch. Upon learning its location, the device can then share this information with peers, management servers, and other equipment on its network. The physical location of a DMP is almost always an important factor in which central management server it should trust, which assets it should play, which commands it should run, and which schedule it should follow.

Someone must configure two essential values on your Medianet-enabled switch: “*civic-location-id*” and “*additional-location- information*.” These values are encapsulated into a CDP message that endpoints receive.

Note **CDP and LLDP constrain how much location information you can store on a Medianet-enabled switch.** Make sure that this information never exceeds 255 bytes.

Note **A DMP 4400G cannot receive or use Location Services information over Wi-Fi.** Its connection type to your Medianet-enabled switch must be Ethernet.

Tip **Is the Location ID value blank in DMPDM?** If so, make sure that a *civic-location-id* value is defined correctly on your switch. (CSCti85043).

M

[↑ Return to Top](#)

Medianet

End-to-end intelligent architecture for optimized delivery of rich media to a variety of endpoints throughout an enterprise. Cisco Medianet is media-aware, endpoint-aware, and network-aware.

MSI

Media Services Interface. Announces services to a DMP or any other Medianet-ready device that you connect to a Medianet-enabled switch. MSI tells devices about their neighbors and their civic location.

MSI registration service

Medianet feature by which:

- Devices send encrypted registration requests to management servers.
- Servers receive such requests, respond to them, and store records in a local database.

MSI service discovery

Mechanism that applies DHCP option 125 packets to advertise—and poll for—the availability of particular services in a network. Service discovery also notes which hosts provide these services.

Partial Support for Cisco Medianet 2.1 Features

Some DMP endpoints support some Cisco [Medianet](#) 2.1 features.

Note

We do not support any [Medianet](#) features on DMP 4305G endpoints.

Tip

- To assess your network for [Medianet](#) readiness, see <http://cisco.com/go/mra>.
- To review solution reference network designs (SRNDs) for [Medianet](#), see http://www.cisco.com/en/US/solutions/ns340/ns414/ns742/ns819/landing_vid_medianet.html.

DMP 4310G

DMP 4310G endpoints support discovery via [DHCP](#) and can learn their physical location. In addition, they know and can broadcast their product type, model, and software version.

Through their use of your [Medianet](#), they can receive their IP address, VLAN assignment, and network configuration settings automatically. Furthermore, they receive information from [Medianet](#) through [DHCP](#)¹ that helps them to autoregister themselves with your DMM server.

Later, after a successful autoregistration, the splash screen on these DMPs includes key parameters and states explicitly that setup succeeded.

DMP 4400G

[Medianet](#) 2.1 feature support by DMP 4400G endpoints is equivalent to support by DMP 4310G endpoints, **with just one exception.**

Ordinarily, a DMP 4400G can participate in networks via Ethernet or Wi-Fi. **However:**

A Wi-Fi connection by a DMP 4400G prevents it from obtaining or using any [Location Services](#) information that [Medianet](#) might be configured to provide.

1. With DHCP option 125 (V-I Vendor-Specific Information) for service discovery, after you configure your supported [DHCP](#) server to support this option. See [RFC 3925](#).

DHCP Server Configuration Notes for MSI Service Discovery

For your [MSI service discovery](#) purposes as a DMP administrator, [Medianet](#) must know that a DMM server is available and know exactly which addressable node it is on your network. You must configure your DHCP server to facilitate this information-sharing model.

Configuration methods vary among platforms and implementations.

- [dhcpd Example, page 12-6](#)
- [Windows Server Example, page 12-6](#)

dhcpcd Example

An example here shows entries in the **dhcpcd.conf** file for a Linux-based DHCP server called *dhcpcd*. Entries like these advertise the IP address of your authoritative DMM appliance—converted here from decimal to hex and shown in red—to any DMPs that should trust its directives implicitly.

```
option domain-name "example.com";
option domain-name-servers 192.168.1.1;
option option-125 code 125 = string;
default-lease-time 600;
max-lease-time 7200;
authoritative;
log-facility local7;
subnet 192.168.1.0 netmask 255.255.255.0 {
    range 192.168.1.200 192.168.1.210;
    option routers 192.168.1.1;
    option subnet-mask 255.255.255.0;
}
class "DMM" {
    match if option option-125 = "\x00\x00\x00\x09\x06\x13\x04\x01\x44\x4d\x4d";
    option option-125
"\x00\x00\x00\x09\x0b\x14\x09\x01\x80\x6b\xe0\xbc\x1f\x90\x00\x01";
}
```

Tip

The Linux CLI can easily convert IP address octets from decimal to hexadecimal.

```
$ echo 'ibase=10;obase=16; octet' | bc ← (Remember to use a closing quote mark before the pipe.)
```

And so, in keeping with the previous conversion example, shown in red:

- 128 becomes **x80**
- 107 becomes **x6b**
- 224 becomes **xe0**
- 188 becomes **xbc**

Note

See the Medianet documentation on Cisco.com for detailed instructions.

Windows Server Example

In contrast, the DHCP offering in Windows Server 2008 (and, likewise, Windows Server 2003) cannot handle DHCP option 125 queries natively. Therefore, you must install a “callout” DLL that injects this ability into the server before you can configure it to advertise the availability of any service.

Note

- For **32-bit** Windows Server, the DLL filename is DHCPSPDLL**x86**.DLL.
- For **64-bit** Windows Server, the DLL filename is DHCPSPDLL**x64**.DLL.

Afterward, you must edit `\Medianet\msi\apps\dhcpsdll\src\dhcpsdconfig.reg` to include a *3-tuple* (**IP,port,transport**), converted to hexadecimal, that identifies your DMM appliance as a provider of centralized management for DMPs.

```
[HKEY_LOCAL_MACHINE\SOFTWARE\Cisco]
[HKEY_LOCAL_MACHINE\SOFTWARE\Cisco\DhcpSd\Settings]
"DebugLevel"=dword:00000000
"IgnoreProcessITFromChain"=dword:00000001
[HKEY_LOCAL_MACHINE\SOFTWARE\Cisco\DhcpSd\Records\1]
"DMM"=hex:0a,c2,33,2a,1f,90,00,01
```

And finally, you must add two keys to the Windows registry, under

```
\HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\DHCPServer\Parameters
```

- **CalloutEnabled** REG_DWORD 1
- **CalloutDlls** REG_MULTI_SZ *<full_path_to_DLL>*

Note

See the Medianet documentation on Cisco.com for detailed instructions.

Understand Medianet Autoconfiguration for DMPs

DMP 4310G and 4400G endpoints can use CDP to announce and identify themselves on networks. And you might use Ethernet cables to connect such DMPs to switches where the autoconfiguration (**Auto Smartports**) features of Medianet are enabled. When you do, these switches recognize from the CDP announcements that the newly connected devices are DMPs.

After recognizing that a DMP is attached to one of its Ethernet ports, the switch can apply to this port a set of built-in configuration macros (**Auto Smartports**) that are optimized specifically for DMPs. By configuring so many settings automatically, Medianet can accelerate and simplify DMP mass deployments, QoS configuration, and asset tracking. In turn, these simplified deployments can lower your operating costs.

Information That Medianet and DMPs Exchange

Medianet and a DMP can exchange these types of data.

- name of the chassis
- system name
- system object
- hardware revision
- firmware revision
- software revision
- serial number
- manufacturing name
- model name
- asset identifier
- CDP timeout
- VLAN assignment
- switch port assignment
- switch name and model
- switch IP address
- location string

If you would like to learn more about Medianet, see <http://cisco.com/go/medianet>.

Medianet Activation Workflow for a DMP 4310G or 4400G

Medianet support is enabled by default on DMPs in Cisco DMS release 5.3. However, you can turn this support Off or back On again at your discretion.

Note

We do not support any [Medianet](#) features on DMP 4305G endpoints.

Tip

You can deactivate Medianet support on one or more DMPs. Simply reverse step **3b** in this workflow.

1. Issue the command to enable [Medianet 2.1](#) on a supported network switch that runs Cisco IOS 12.2(55.0.36)SE).

```
Switch(config)#macro auto global processing
```
2. Enable the [Auto Smartports](#) feature globally on the switch.
3. Use either DMPDM or Digital Signs to enable [Medianet](#) features on your DMP 4310G or 4400G.

DMPDM

- a. Click **Network** in the Settings area. ‘

- b. Choose **On** from the Medianet Enabled list in the Medianet Services area.

The screenshot shows the 'Medianet Services' configuration page. The 'MediaNet Enabled' dropdown menu is set to 'On'. Other fields include Timeout (ms) set to 30000, Switch IP Address, Switch Name, Switch Port set to GigabitEthernet2/3, VLAN set to 320, Location ID, and Location URL.

Medianet Services	
MediaNet Enabled	On
Timeout (ms)	30000
Switch IP Address	
Switch Name	
Switch Port	GigabitEthernet2/3
VLAN	320
Location ID	
Location URL	

- c. Save this changed setting, and then restart your DMP.

Digital Signs

- a. Create and save a system task that uses:
 - **Set** as its request type.
 - `init.startService_msi=yes&mib.save=1&mng.reboot=1` as its request string.

The screenshot shows a dialog box titled "Create New System Task". It has four input fields: "Name", "Description", "Request Type" (a dropdown menu with "Set" selected), and "Request". Below the fields are "Submit" and "Cancel" buttons.

- b. Schedule and deploy the system task to run on your DMP 4310G or 4400G.
The request string includes a command to restart your DMP.

Restrictions

Non-Medianet Autoregistration

- DMM-native autoregistration **does not** use any [Medianet](#) technologies. It uses NMAP (CSCtk02451).

DHCP

- As of May 2011, these [DHCP](#) servers have passed our tests for using [Medianet](#) with DMPs.
 - Linux ISC dhcpd
 - The DHCP implementation in Windows Server 2003
 - The DHCP implementation in Windows Server 2008
 - Cisco Network Registrar

Note THIS RELEASE DOES NOT SUPPORT ANY [DHCP](#) SERVER THAT RUNS ON A CISCO ROUTER OR SWITCH.

Login Credentials

- All DMPs that you manage centrally in DMM must share one identical set of DMPDM login credentials.

Medianet

- A DMP 4310G might come to use the wrong IP address when it relies upon a [Medianet](#) switch where more than one VLAN uses DHCP. For the switch to bungle IP address assignment in this way, temporary conditions that do not sever the DMP's AC power connection must nonetheless interrupt its network connection through the switch. (Thus, this problem cannot possibly occur while the DMP uses PoE.) Specifically, the [Medianet](#) switch assigns its default VLAN to your DMP. But then—after your DMP's network connection is interrupted and restored—your [Medianet](#) switch assigns to your DMP a dynamic IP address from another VLAN on this same switch. The mismatch disrupts centralized management of your DMP.

To prevent this problem or to recover from it, you must run a shell script on your switch. See the “Prevent DHCP Address Assignments to the Wrong VLAN” section on page 12-25.

Guidelines

- [Limit Your Use of Manual Registration, page 12-11](#)
- [General Best Practices for Non-Medianet Autoregistration, page 12-11](#)
- [Best Practices to Schedule Non-Medianet Autoregistration Events, page 12-11](#)

Limit Your Use of Manual Registration

Caution

In addition to our support for Medianet features to autoregister your DMPs, DMM includes an efficient, timesaving feature of its own to autoregister your DMPs. Despite the presence of two robust and largely automated methods, you can register a DMP manually for testing purposes.

We recommend that you never use the method to register a DMP manually, except in a lab for testing purposes. Manual registration is neither suitable for, nor scalable in, a production network.

Eventually, when autoregistration finds and adds a DMP that you registered manually, the device inventory database develops multiple records for the one device. We see this duplication as an IP address conflict, which interferes with normal operation and triggers an alarm in DMS-Admin.

General Best Practices for Non-Medianet Autoregistration

Choose Network Ranges Cautiously

When you autoregister DMPs that are new to your DMM appliance, they restart immediately even when they are known already to another DMM appliance, and even when they are running an event. Therefore, when your organization uses more than one DMM appliance, be careful to autoregister only those DMPs that you are not already managing centrally elsewhere. Otherwise, you might temporarily disrupt media playback for the signs in your network.

Best Practices to Schedule Non-Medianet Autoregistration Events

Stagger Deployment Schedules

DMP autoregistration operations that are native to DMM (as opposed to the superficially similar operations in a Medianet) occur in a sequence that does not tolerate disruption.

- You can schedule multiple DMP autoregistration operations to run simultaneously only when they will all search the same one subnet.
- **However**, when you define DMP autoregistration operations to search **more than one** subnet, you must not schedule them to run simultaneously, or even to overlap. When they overlap, only the first of them can run at all. Furthermore, DMM does not show any error message to explain why the similar operations all failed.

- Therefore, you should plan to stagger the start times by at least 35 minutes apiece when you schedule DMP autoregistration tasks that will search multiple subnets.

Note In a very large network that contains thousands of DMPs, the necessary interval might be longer than 35 minutes.

- We recommend that you autoregister DMPs after normal business hours. Autoregistration of 5,000 DMPs takes approximately 4 minutes in a fast network and does not use polling.

Set Events to Recur as Needed

DMM runs any non-Medianet autoregistration job once each time that you schedule it to run.

DMM does not scan the specified network range continuously for DMPs that you might add in the future. Therefore, when you plan to add DMPs frequently, you should schedule a non-Medianet autoregistration event to recur accordingly.

- Your DMPs must all share identical user credentials for their respective accounts. **Otherwise, non-Medianet autoregistration cannot occur.** Nor can DMM centrally manage DMPs whose passwords differ from your universal DMP password.

Note Special characters, including exclamation points (!), question marks (?), ampersands (&), at signs (@), and asterisks (*) are forbidden in DMP passwords. (CSCsq41233; CSCsw47873; CSCub67295)

- Verify that the routers, switches, and firewalls between your DMM appliance and the NMAP address range for non-Medianet autoregistration allow TCP port 7777 to send and receive packets (CSCtk02451). Verify also that ICMP (ping) traffic is allowed to pass from your DMM appliance to your DMPs on this port. **When any of this traffic is blocked anywhere along its route, non-Medianet autoregistration cannot occur.**

Caution

You can stop untrusted DMM appliances from seizing control of your DMPs. Simply configure your network firewall to restrict which devices can send inbound traffic to your DMPs over TCP port 7777.

Understand the Sequence of Operations for Non-Medianet Autoregistration

DMM-native (non-Medianet) autoregistration operations follow this sequence.

1. DMM scans every device in the specified address range, looking for devices where TCP port 7777 is open.
2. DMM confirms which such devices are DMPs.
3. DMPs receive information about your DMM server, and are then instructed to restart.
4. Upon restarting, DMPs transmit updated information about themselves to DMM and set their own status to “Up.”
5. DMM generates new database records for all DMPs that are newly autoregistered.
6. DMM assigns newly registered DMPs to any DMP groups that match the address range that you entered.
7. DMM assigns newly registered DMPs to the “All DMPs” group.

- [Delete DMPs Manually from Your Device Inventory](#), page 12-22

Use DMPDM to Prepare a DMP for Manual Registration

When autoregistration is not suitable, such as for testing purposes, you can perform the required steps manually to register a DMP in DMM. However, you must first prepare the DMP.

Procedure

-
- Step 1** Point your browser to the IP address of a DMP that you will manage centrally.
 - Step 2** At the DMPDM login prompt, enter the username and the password that you configured for the DMP.
 - Step 3** Click **DMP Management** in the Administration area, and then enter the required values.

- a. Enter in the DMM Appliance IP Address field the full and correct IP address of your DMM appliance.
- b. Enter in the DMM Server Timeout (in seconds) field the maximum number of seconds that your DMP should wait for a response from your DMM appliance.

Step 4 Click **Apply** to confirm your entries.

Step 5 Click **Save and Restart DMP** in the Administration area, and then click to confirm.

Step 6 Stop. You have completed this procedure.

Related Topics

- [Add or Edit Address Ranges for Non-Medianet Autoregistration, page 12-18](#)
- [Add or Edit One DMP Manually, page 12-21](#)

Use a System Task to Normalize DMP Passwords

Do the management passwords on any of your DMPs differ from your norm for DMPs? Or do any DMP passwords include forbidden characters?

If so, you must edit these values to normalize them and remove any forbidden characters. Centralized management of DMPs is possible in DMM only when your DMPs all use one identical username (**admin**) and one identical password.

Note

Special characters, including exclamation points (!), question marks (?), ampersands (&), at signs (@), and asterisks (*) are forbidden in DMP passwords. (CSCsq41233; CSCsw47873; CSCub67295)

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > Advanced Tasks > System Tasks**. Then, click **Add New Application**.

The Create New System Task form opens.

The 'Create New System Task' form contains the following fields:

- Name:
- Description:
- Request Type:
- Request:

Buttons:

Step 3 Enter a name and description for your new task.

Step 4 Choose **Set** from the Request Type list.

Step 5 Enter this command string in the Request text box.

```
init.WEB_password=&mib.save=1&mng.reboot=1
```

Step 6 Click **Submit** to save the task and make it available to use.

Step 7 Send the password-changing instruction simultaneously to multiple DMPs in your network.

- Choose **Schedules > Play Now**.
- Choose a group from the DMP Groups object selector.
- Check the check box for each DMP where the DMP Web Account password should change.

- d. Choose from the Select an Event Type list the system task that you named in Step 2.
- e. Click **Submit**.

Note After your targeted DMPs restart, you must update DMM user credential entries at Settings > Server Settings.

Step 8 Stop. You have completed this procedure.

What to Do Next

- **MANDATORY**—[Establish Trust Between Digital Signs and your Centrally Managed DMPs, page 12-17](#)

Establish Trust Between Digital Signs and your Centrally Managed DMPs

You must tell *Cisco Digital Signs* what user credentials to use at 5-minute intervals when it polls your DMPs and at any other time when it sends commands, queries, schedules or assets to your DMPs. Also, you must tell your DMPs which one DMM appliance to trust with this authority.

Note

This procedure assumes that you manage your DMPs centrally. Furthermore, it assumes that you use *Cisco Digital Signs* and not *Cisco StadiumVision* for this purpose.

Before You Begin

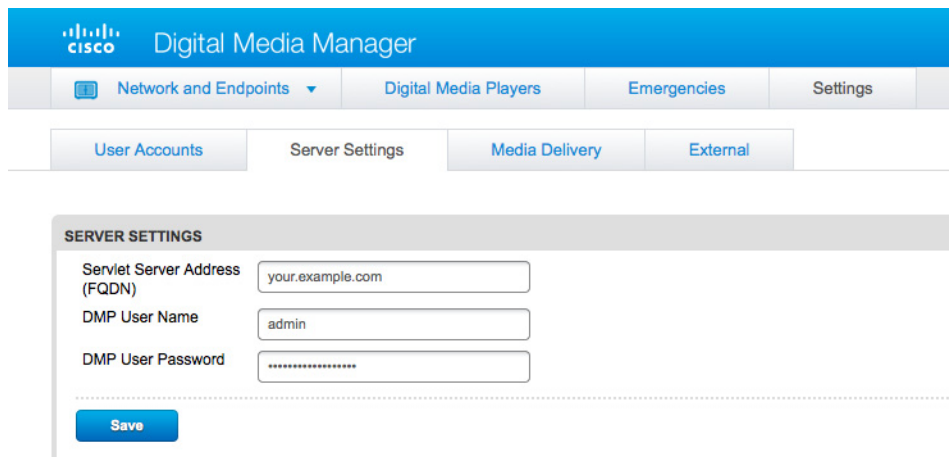

- Verify that your DMPs all use identical credentials.
- Log in to DMM.

Procedure

Step 1 Click Network and Endpoints.

Step 2 Choose Settings > Server Settings.

Step 3 Enter the required values.

- **Servlet Server Address**—If you have not already done so, enter the DNS-resolvable hostname and domain (together, these are the *FQDN*) for your DMM appliance, such as **dmm.example.com**.

Note **YOUR ENTRY HERE MUST BE DNS-RESOLVABLE!** Otherwise your DMPs cannot load any media assets or other deployments from DMM. (CSCtx15347)

- **DMP User Name**—Enter **admin** or, when you have changed the DMP Web Account username from the default value, enter the new username that you assigned.
- **DMP User Password**—Enter the password that corresponds to the username.

Step 4 Click **Save**.

Step 5 Stop. You have completed this procedure.

Caution

DMP credentials must match exactly in DMPDM and Cisco Digital Signs. If you ever use a system task in *Cisco Digital Signs* to change DMP credentials, you must then return here and enter matching values. Otherwise, *Cisco Digital Signs* will use the wrong credentials when it tries to communicate with your DMPs. Then, after communication fails, it will consider your DMPs to be unreachable and unmanageable.

Add or Edit Address Ranges for Non-Medianet Autoregistration

Even without access to Cisco Medianet technologies, you can autoregister all of the DMPs in any NMAP address range that you specify (CSCtk02451). Afterward, the registered DMPs support centralized management from DMM.

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > Advanced Tasks**.

Step 3 Click the **DMP Discovery** row in the Application Types list.

Step 4 Do one of the following.

- *Would you like to define an NMAP range?* **When you will define a new range for autoregistration**
 - a. Click **Add New Application**.
 - b. The page is refreshed.
 - c. Name and describe the deployable event that should use these settings.

- *Would you like to edit an NMAP range?* **When you will edit a saved range for autoregistration**
 - a. Click the Applications list row whose settings should be edited.
 - b. Click **Edit Application**.
 - c. The page is refreshed.

Step 5 Set the necessary values.

Step 6 Click **Submit** to save your work.

OR

Click **Cancel** to discard your work.

Step 7 Schedule a channel event to deliver or run this application.

Step 8 Stop. You have completed this procedure.

Timesaver

Alternatively, you can use DMM-native (non-Medianet) autoregistration to populate a DMP group.

1. Choose **Digital Media Players > DMP Manager**.
 2. Click a DMP group to highlight it.
 3. Choose **More Actions > Edit Group**.
 4. Proceed as you would with any other non-Medianet autoregistration.
-

Related Topics

- [Understand the Sequence of Operations for Non-Medianet Autoregistration, page 12-12](#)
- [Elements to Autoregister DMPs, page 12-23](#)
- [Elements to Configure Non-Medianet Autoregistration, page 12-25](#)

Delete Address Ranges for Non-Medianet Autoregistration

You can delete network range definitions you saved for DMP autoregistration events.

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > Advanced Tasks**.

Step 3 Click the **DMP Discovery** row in the Application Types list.

Step 4 Click the Applications list row whose settings should be deleted.

Step 5 Click **Delete Application**.

Step 6 Click **Submit** to save your work.

OR

Click **Cancel** to discard your work.

Step 7 Schedule a calendar event to deliver or run this application.

Step 8 Stop. You have completed this procedure.

Related Topics

- [Elements to Configure Non-Medianet Autoregistration, page 12-25](#)

Add or Edit One DMP Manually

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 Do either of the following.

- Click **Add DMP** above the DMP List table.

OR

- Click the name of a DMP group to choose it in the object selector, and then click **Edit DMP** above the DMP List table.

Tip **Is the Add DMP button missing from your DMP Manager page?** If so, something has blocked port 843 on your switch or router. Open port 843 and try again.

Step 4 Choose options and enter required values for the DMP.

After you register a DMP manually, its Description value in DMP Manager might be blank, even though your other DMPs show “registered” as their Description value. This happens only when you have not entered anything in the Description field. (CSCtr51123)

Step 5 Click **Submit** to save your work.

OR

Click **Clear** to discard your work.

Step 6 (Optional) Add the DMP to a DMP group.

Step 7 Schedule a calendar event to deliver or run this application.

Step 8 Stop. You have completed this procedure.

Delete DMPs Manually from Your Device Inventory

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 *Do either of the following.*

- Browse the DMP Groups tree until you find the parent group whose member DMP should be deleted. Then, click the name of this DMP group.

OR

- Choose an option from the Filter list to restrict which DMPs the DMP List table describes.

Step 4 Click to highlight the DMP to be deleted.

Step 5 Choose **More Actions > Delete from System**.

DMM shows a warning message and asks that you either confirm or cancel your request.

Step 6 Click **OK** to save your work.

OR

Click **Cancel** to discard your work.

Step 7 Schedule a calendar event to deliver or run this application.

Step 8 Stop. You have completed this procedure.

Navigation Path

Either of these.

- Network and Endpoints > Digital Media Players > DMP Manager > Add DMP
- Network and Endpoints > Digital Media Players > DMP Manager > Edit DMP

Tip

Is the Add DMP button missing from your DMP Manager page? If so, something has blocked port 843 on your switch or router. Open port 843 and try again.

Table 12-2 Elements to Add and Edit One DMP

Element	Description
Name	A unique and human-readable name for the DMP. Do not use any name that includes the ‘&’ character.
IP Address	The public IP address that receives instructions and data from DMM.
MAC Address	The MAC address that the DMP NIC uses.
Description	<p>Note After you register a DMP manually, its Description value in DMP Manager might be blank, even though your other DMPs show “registered” as their Description value. This happens only when you have not entered anything in the Description field. (CSctr51123)</p> <p>Optional, brief description of the DMP, its deployment site, or other details that are relevant or meaningful to you.</p>
WLAN	<p>The WLAN address of a DMP 4400G.</p> <p>Note We do not provide this value for other DMP models.</p>
Serial No.	<p>The serial number of a DMP 4310G.</p> <p>Note We do not provide this value for other DMP models.</p>

Elements to Delete One DMP Manually

Navigation Path

- Network and Endpoints > Digital Media Players > DMP Manager > Delete DMPs

Table 12-3 Elements to Delete One DMP

Element	Description
Delete DMP	Deletes from your inventory database all records of the DMP that you highlighted.

Elements to Configure Non-Medianet Autoregistration

Navigation Path

- Network and Endpoints > Digital Media Players > Advanced Tasks > DMP Discovery

Table 12-4 Elements to Configure Autoregistration

Element	Description
Name	A unique and human-readable name for this autoregistration IP address range task. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
Discovery IP Range	The NMAP syntax to describe one or multiple ranges of IP addresses.
WLAN	The WLAN address of a DMP 4400G. Note We do not provide this value for other DMP models.
Serial No.	The serial number of a DMP 4310G. Note We do not provide this value for other DMP models.

Prevent DHCP Address Assignments to the Wrong VLAN

Note

You can run the following shell script ("mandatory.cdp.sh") on a Cisco Catalyst 3750 Series switch. This shell script can prevent a type of DHCP-VLAN misalignment problem that we describe under the "Medianet" heading in the "Restrictions" section on page 12-10.

Tip

To learn about shell script execution on your switch, see the documentation for your switch on Cisco.com.

FAQs and Troubleshooting

- [FAQs, page 12-29](#)

FAQs

Q. Why does DMM report that a DMP is down within 5 minutes of my registering the DMP successfully in DMM?

- A.** Make sure that the “Servlet Server Address” value is correct in DMM. See the [“Establish Trust Between Digital Signs and your Centrally Managed DMPs”](#) section on page 12-17.
- Q.** Can I take advantage of DMM autoregistration without any Medianet-ready switch?
- A.** Yes. You can use the DMM-native autoregistration that we have always supported or you can configure your DHCP server to support option 125, and thereby advertise to your DMPs the IP address of their trusted DMM appliance.
- Q.** Can I use a Cisco switch or router as my DHCP server?
- A.** No. Cisco switches and routers do not support DHCP configurations that include option 125.
- Q.** Can a DMP that uses a static IP address autoregister itself to DMM?
- A.** It depends. Although a DMP with a static IP address does not communicate with any DHCP server—and, thus, is blind to information that it might otherwise receive via DHCP option 125—it should still be possible to use DMM native-autoregistration, as described elsewhere in this chapter.
- Q.** Can I obtain the serial number of a DMP?
- A.** Yes, you can—*but only for a DMP 4310G whose installed firmware version is at least 5.2.3*. There are two methods.
- **Use DMM**
 1. Define an advanced task in DMM.
 2. Choose **Get** as its request type.
 3. Enter exactly this request string.
 - `init.serial`
 4. Name and save your advanced task.
 5. Send your advanced task to one or more DMP 4310G endpoints.
 - **Use HTTP**

Follow exactly this syntax.

```
https://admin: @:7777/get_param?p=init.serial
```

Organize DMPs in Groups

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 13-1](#)
- [Procedures, page 13-3](#)
- [Reference, page 13-7](#)

We prepared this material with specific expectations of you.

- ✓ You want to manage and organize your DMPs and presentation systems centrally and effectively.
-

Concepts

- [Overview, page 13-1](#)
- [Understand the Effect of Nesting One DMP Group Inside Another, page 13-2](#)

Overview

Features of the DMP Manager page can help you to:

- Organize your DMPs in groups.
- Manage DMPs collectively instead of managing only one DMP at a time.
- Deploy assets or instructions to DMPs immediately.
- Manage the presentation systems in your network.

When you choose options anywhere on the DMP Manager page, it is updated automatically to show the options and features that are relevant to your selection.

Table 13-1 Tasks That You Can Perform on the DMP Manager Page

Task	To Learn More
DMP Group Management Tasks	
Browse the group hierarchy and collapse or expand its levels	<ul style="list-style-type: none"> Click a group in the DMP Groups tree to list its member DMPs in the DMP table. Click a closed group to expand its level in the object selector. Click an opened group to collapse its level in the object selector.
Add a new group	<ul style="list-style-type: none"> Add and Edit DMP Groups, page 13-3.
Edit an existing group	<ul style="list-style-type: none"> Understand the Effect of Nesting One DMP Group Inside Another, page 13-2.
Populate a group with DMPs	<ul style="list-style-type: none"> Automatically, in a production network: Add and Edit DMP Groups, page 13-3. Manually, in a lab: Add DMPs Manually to DMP Groups, page 13-5.
Delete a group	Delete DMP Groups, page 13-4.
Remove DMPs from groups	Remove DMPs Manually from DMP Groups, page 13-5.

Related Topics

- [Top-Level Elements to Manage DMPs and DMP Groups, page 13-7](#)

Understand the Effect of Nesting One DMP Group Inside Another

We recommend that you create DMP groups to organize your DMPs according to characteristics that they have in common, such as where or how you will use them, according to whatever logic works best for you. For example, the logical basis for your DMP groups might be geographic or corporate.

DMP Groups [Expand / Collapse All](#)

One DMP group can contain another. Each choice that you make for centralized management propagates from parent (DMP group), to child (DMP subgroup *or* DMP), to grandchild (DMP). There is no maximum number of levels that you can add to the hierarchy, but a simpler organization is more scalable than an unreasonably complex one would be.

We recommend that you do not assign any DMP to the root level in the hierarchy, due to the complexity of management, but we do not prevent you from doing this.

Procedures

- [Add and Edit DMP Groups, page 13-3](#)
- [Delete DMP Groups, page 13-4](#)
- [Add DMPs Manually to DMP Groups, page 13-5](#)
- [Remove DMPs Manually from DMP Groups, page 13-5](#)
- [Filter the DMP List Table, page 13-6](#)

Add and Edit DMP Groups

Note

DMM uses TCP port 7777 to communicate with DMPs. This port is open on DMPs. You cannot close it.

When you create or edit a DMP group, the least that you must do is name the group. In addition, you can populate the group automatically with all of the DMPs in any CIDR address range that you specify, or you can manually add DMPs to a group.

Tip

You can save a named group for use in the future, even if you have not yet assigned any DMPs to it.

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 Do either of the following.

- Click **Create Group**.
- Click a group to highlight it in the tree, and then choose **More Actions > Edit Group**.

Step 4 Enter a name and a description for the group.

Step 5 Define the network ranges from which to autoregister DMPs that should join this DMP group.

OR

You can skip this step if you will not autoregister DMPs now.

**Tip**

DMM runs each autodiscovery job one time. It does not look continually in the specified network range for DMPs that you might add in the future. When you plan to add DMPs to your network continually, you can schedule an autodiscovery event to recur as often as necessary.

- Step 6** Click **OK** to save your work.
- Step 7** Stop. You have completed this procedure.

Related Topics

- [Elements to Add or Edit DMP Groups, page 13-9](#)

Delete DMP Groups

Before You Begin

- Log in to DMM.

Procedure

- Step 1** Click **Network and Endpoints**.

- Step 2** Choose **Digital Media Players > DMP Manager**.
- Step 3** Navigate in the DMP Groups tree, expanding levels until you find the group.
- Step 4** Click the group name in the tree.
- Step 5** Choose **More Actions > Delete Group**.
- Step 6** Click **OK** to delete the group.

OR

Click **Cancel** to stop this deletion.

- Step 7** Stop. You have completed this procedure.

Related Topics

- [Remove DMPs Manually from DMP Groups, page 13-5](#)

Add DMPs Manually to DMP Groups

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 Navigate in the DMP Groups tree, expanding levels until you find a group that already includes the DMP.

Step 4 Click to highlight this group in the tree.

The DMP List table is refreshed. It now describes DMPs in your highlighted group.

Step 5 Click the DMP and drag it to a different group in the DMP Groups tree.

Step 6 Stop. You have completed this procedure.

Remove DMPs Manually from DMP Groups

Before You Begin

- Log in to DMM.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 Navigate in the object selector tree, expanding its levels until you find a DMP group that should no longer include a DMP.

Step 4 Click to highlight this group in the tree.

The DMP List table is refreshed. It now describes DMPs in your highlighted group.

- Step 5** Click **Delete** in the row whose DMP should leave a group.
- Step 6** Choose **Remove DMP from Group**.
- Step 7** Click **OK**.
- Step 8** Stop. You have completed this procedure.

Filter the DMP List Table

Before You Begin

- Log in to DMM.

Procedure

- Step 1** Click **Network and Endpoints**.

- Step 2** Choose **Digital Media Players > DMP Manager**.
- Step 3** Click the entry in the object selector tree for a DMP group whose list of member DMPs you will filter. The DMP List table straddles multiple pages when there are more DMPs than there are rows per page.
- Step 4** Choose one option from the Filter list, above the DMP List table:
 - Name
 - IP
 - MAC
 - Status
 - Version
 - Product
 - Description
 - Location
- Step 5** (**Optional**) *Would you like to specify how many rows of data the table should load per page? If so, choose the number of rows from the list below the table.*
- Step 6** (**Optional**) *Does the table straddle multiple pages? If so, use pagination controls above the table to move between pages.*

- Step 7** Click **Go**.
- Step 8** Stop. You have completed this procedure.

Table 13-2 Elements for Managing DMPs and DMP Groups

Element	Description
DMP Groups	
<i>A hierarchical tree of DMP groups and their subgroups. Here, you can create, edit, and delete groups, as needed, and choose which DMPs the DMP List table should describe.</i>	
Create Group	Shows the Create DMP Group dialog box, where you first define the attributes of a group.
More Actions	Includes these list options: <ul style="list-style-type: none"> • View Group—Shows the View DMP Group dialog box, where you can review group attributes quickly. • Edit Group—Shows the Edit DMP Group dialog box, where you can edit the attributes of a group. • Delete Group—Prompts you to confirm or cancel a group's deletion. Then, upon confirmation, deletes the group.

Table 13-2 Elements for Managing DMPs and DMP Groups (continued)

Element	Description
DMP List	
<i>All DMPs at (or below) a level that you highlight in the DMP Groups tree. Or, the DMPs that match your filtering criteria.</i>	
<i>To see every registered DMP in your network, click the group that represents the root level. (By default, its name is “All DMPs” but this name is editable.) When there are more DMPs than there are rows, the list might straddle multiple pages. In this case, use pagination controls under the table to move from one page to another.</i>	
Control TV	Opens a dialog box where you can adjust standard settings for some flatscreen display models that you might attach to a centrally managed DMP.
Run Task	Opens a dialog box where you can choose commands or content for delivery to DMPs.
Add DMP	Shows the Add New DMP dialog box.
Edit DMP	Shows the Edit DMP dialog box.
Delete DMP	Deletes the DMP that you highlighted.
Assign DMP to Group	Creates an association between at least one DMP and at least one group.
Remove DMP from Group	Severs the association between at least one DMP and at least one group.
Filter	A method to redraw the DMP List table, including only those DMPs that match your criteria.
N per page	Choose from this list how many rows the table should show. Its options are 10, 20, 50, and 100. Your choice affects table pagination when the table contains more records than rows. In this case, you can use pagination controls under the table to load records from a different range.
Name	A unique and human-readable name that you entered or that DMM chose; If DMM chose the name, it is either the DMP IP address or MAC address.
Status	Says whether a DMP is reachable. <ul style="list-style-type: none"> • A green icon tells you that the DMP is connected to a power source, uses a known IP address, and is reachable. • A red icon tells you that the DMP is unreachable.
LCD Status	One of these: <ul style="list-style-type: none"> • On • Off • N/A
IP Address	The public IP address at which the DMP receives instructions and data from DMM.
Version	The release number for the installed firmware version on the DMP.
Product	The DMP model number.
Description	The description that you entered.
Internal Storage Free/Total GB	Measures the available storage capacity of the DMP’s internal solid-state drive, and then measures the total capacity.
External Storage Free/Total GB	Measures the available storage capacity of the external USB drive, if the DMP is connected to one, and then measures the total capacity.
WAAS Status	Says that a DMP has mounted a CIFS share, or does not say anything.

Go to terms that start with... [[numerals](#) | [A](#) | [C](#) | [E](#) | [P](#) | [S](#) | [T](#) | [W](#)].

numerals

- 802.11b** A wireless networking standard that specifies a maximum data transfer rate of 11Mbps and an operating frequency of 2.4GHz.
- 802.11g** A wireless networking standard that specifies a maximum data transfer rate of 54Mbps, an operating frequency of 2.4GHz, and backward compatibility with 802.11b devices.

A

AAA Authentication, Authorization, and Accounting.

See also [EAP-FAST](#), [EAP-MD5 server](#), [LEAP server](#), and [PEAP server](#).

access point A device that allows wireless-equipped computers and other devices to communicate with a wired network. Also used to expand the range of a wireless network.

C

[Return to Top](#)

CCMP

Based on the Advanced Encryption Standard (AES) defined in the National Institute of Standards and Technology's FIPS Publication 197, AES-CCMP is a symmetric block cipher that can encrypt and decrypt data using keys of 128, 192, and 256 bits. AES-CCMP is superior to WEP encryption and is defined in the IEEE 802.11i standard.

See also [WEP keys](#).

E

[Return to Top](#)

EAP *Extensible Authentication Protocol*. A protocol that WPA uses to authorize user access to wireless networks. Common implementations include EAP-FAST and EAP-MD5.

EAP-FAST EAP-FAST is a two-phase implementation of the EAP authentication protocol:

- Phase 0, provisioning. Provision client with a credential called PAC (Protected Access Credentials).
- Phase 1, authentication. Use the PAC to establish a tunnel with the server and authenticate the username and password.

See also [AAA](#) and [EAP](#).

EAP-MD5 server

Servers that use EAP to provide dynamic, session-specific wireless encryption keys, central user administration, and authentication between clients and access points. EAP-MD5 uses MD5 hashing on client and challenge passwords.

See also [AAA](#) and [EAP](#).

P

[Return to Top](#)

PEAP server

Protected EAP server, which combines centralized two-way authentication with dynamically generated wireless equivalent privacy keys or WEP keys.

See also [AAA](#), [EAP-MD5 server](#), and [WEP keys](#).

PSK Pre-Shared Key.

- S** [Return to Top](#)
- SSID** *Service Set ID*. It is a unique identifier that client devices use to associate with the access point. The SSID helps client devices distinguish among multiple wireless networks in the same vicinity. The SSID can be any alphanumeric entry up to 32 characters long.
-  **Caution** **The Broadcast SSID setting must be enabled on your wireless access points.** Otherwise, your DMPs are prevented from connecting to your WLAN or obtaining IP addresses.
-  **Caution** **When you change SSID settings for your WLAN, your DMPs lose their wireless network connections.** Because they are disconnected, they cannot reconnect automatically. In this case, affected DMPs will appear to associate to your WLAN access point but will not receive any IP address.
- T** [Return to Top](#)
- TKIP** *Temporal Key Integrity Protocol*, also known as key hashing, is used as part of server-based EAP authentication.
- W** [Return to Top](#)
- WEP** *Wired Equivalent Privacy* is a method to encrypt data transmitted on a wireless network.
- WEP keys** Wired equivalent privacy (WEP) keys are the IEEE 802.11b standard that offers a mechanism for securing wireless LAN data streams. The goals of WEP include access control to prevent unauthorized users who lack a correct WEP key from gaining access to the network, and privacy to protect wireless LAN data streams by encrypting them and allowing de-encryption only by users with the correct WEP keys.
- WPA** *Wi-Fi Protected Access*. WPA is a standards-based, interoperable security enhancement that strongly increases the level of data protection and access control for existing and future wireless LAN systems. It is derived from and will be forward-compatible with the upcoming IEEE 802.11i standard. WPA leverages TKIP for data protection and 802.1X for authenticated key management.

ASCII Passphrases and Hexadecimal Keys for WEP

Tip

You can ignore this topic if your Wi-Fi network uses WPA and not WEP.

Many Wi-Fi access points (wireless routers) accept only a hexadecimal passphrase for WEP-64 and WEP-128. And yet, DMPs accept only an ASCII passphrase for WEP. For this reason, it might be necessary at times to translate your WEP passphrase from ASCII to hexadecimal.

Note

Many third-party converters are available. We do not offer any Cisco converter for this purpose.

The typical workflow is as follows.

1. Pick an ASCII passphrase. For example, *PassphraseWEP128*.
2. Convert your string of ASCII characters to the hexadecimal key or keys for your network.
 - WEP-64 uses four short hexadecimal keys.
 - WEP-128 uses one long hexadecimal key.
3. Configure your DMP to use the ASCII from which you derived the hexadecimal.
4. Configure your wireless router to use the appropriate hexadecimal key or keys.

Related Topics

- [Establish a Wireless Network Connection \(802.11\)](#), page 14-6

Workflow

It is not necessary, useful, or correct to restart a DMP immediately after you define its Wi-Fi settings. Instead, the typical workflow is as follows.

1. Verify that the Broadcast SSID setting is enabled on your wireless access points. Otherwise, your DMPs are prevented from obtaining IP addresses.

Restrictions

- **Ethernet connections take priority over Wi-Fi connections on DMPs where both are active.**
- The Broadcast SSID setting must be enabled on your wireless access points (also known as *wireless routers* or *WLAN controllers*). Otherwise, your DMPs cannot connect to your WLAN and are prevented from obtaining IP addresses.
- We do not support “open” Wi-Fi networks. They are a security risk.
- We do not support multicast or other streams over Wi-Fi.
- DMP 4305G endpoints and DMP 4310G endpoints do not support Wi-Fi.
- When your wireless DMP will not have access to any DHCP server, you must configure its wireless access point to issue a static IP address. You cannot use DMM or DMPDM for this purpose.

Procedures

- [Establish a Wired Network Connection, page 14-5](#)
- [Establish a Wireless Network Connection \(802.11\), page 14-6](#)

Establish a Wired Network Connection

**Note**

See the printed documentation that shipped with your DMP to understand its reliance on DHCP.

A DMP must already be reachable before it can receive Wi-Fi settings. Therefore, you must establish a wired connection before you can deploy Wi-Fi settings.

Before You Begin

- Verify that the Broadcast SSID setting is enabled on your wireless access points. Otherwise, your DMPs cannot connect to your WLAN and are prevented from obtaining IP addresses.
- Does a security policy in your network restrict DHCP address assignments to known MAC addresses? If so, locate the **MAC** address printed on a sticker that is affixed to your DMP. Then, share this address with your security policy administrator.

Procedure

-
- Step 1** Plug one end of a standard Ethernet cable into the corresponding socket on your DMP.
- Step 2** Plug the other end of this cable into a network hub, network switch, or router that participates in an IP network that uses DHCP for dynamic address allocation.
- Step 3** Stop. You have completed this procedure.
-

What to Do Next

- Go to the [“Establish a Wireless Network Connection \(802.11\)”](#) section on page 14-6.

Related Topics

- [DMP Network Interfaces](#), page 14-8

Establish a Wireless Network Connection (802.11)

You can create and save applications that describe the important attributes of wireless 802.11 networks throughout your organization. After you define and save these settings, you can deploy them to centrally managed DMPs individually or to any of your DMP groups.

Before You Begin

- Do your DMPs all support wireless connectivity? Some models do not. See their datasheets on Cisco.com.
- Verify that the Broadcast SSID setting is enabled on your wireless access points. Otherwise, your DMPs cannot connect to your WLAN and are prevented from obtaining IP addresses.
- Does a security policy in your network restrict DHCP address assignments to known MAC addresses? If so, locate the **WLAN** address printed on a sticker that is affixed to your DMP. Then, share this address with your security policy administrator.
- Verify that your wireless network is working correctly, is available, and you understand how it authenticates connection requests.
- Complete all steps in the [“Establish a Wired Network Connection”](#) section on page 14-5.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > Advanced Tasks > Wi-fi Configuration > Add New Application**.

The Create New WIFI Application page opens.

Step 3 Enter a meaningful name for the Wi-Fi network that this application describes.

For example, you might use a name that specifies the locale, the building, and the security method for this network.

Step 4 Enter in the Network SSID field the SSID for the network that this application describes.

**Tip**

In the future, if you reconfigure SSID settings in your WLAN, your DMPs will lose their network connections. If this occurs, simply restart your DMPs to restore normal operation.

Step 5 Choose from the Security list the security method for your network. The options are:

- WEP-64bit
- WEP-128bit
- WPA-PSK
- WPA-EAP
- WPA2-PSK
- WPA2-EAP

The security method that you choose controls, in part, which other fields and options you see.

Step 6 Do the following, as needed.

- Did you choose a WEP-based security method? And do you see the Passphrase field? If so, enter in it the key from which your 64-bit or 128-bit passphrase is cryptographically derived.
- Did you choose a WPA-based or WPA-2-based security method? And do you see the Passphrase field? If so, enter in it the pre-shared key for your network.
- Do you see the Encryption list? If so, choose from it either **TKIP** or **CCMP**.
- Do you see the EAP list? If so, choose from it either **FAST**, **MD5**, or **PEAP (ver.0)**.
- Do you see the Username and Password fields? If so, enter in them respectively a valid username for your wireless network and the password to authenticate that username.

Step 7 Click **Submit** to save this application.

Step 8 Deploy this application to your DMPs, as appropriate.

- *Immediately*—Click the **DMP Manager** tab, choose which DMPs to reconfigure, choose this named application from the “W-Fi Configuration” options in the Actions list, and then click **Go**.
- *In the future*—Click the **Schedules** tab and define deployment parameters for this application.

Step 9 Verify that your DMPs have IP addresses as nodes on the wireless network.

Step 10 After the deployment is successful, **unplug the Ethernet cables** from your DMPs.

Otherwise, their Ethernet connections will take priority over their Wi-Fi connections.

Step 11 After you unplug their Ethernet cables, restart these DMPs.

Step 12 Stop. You have completed this procedure.

DMP Network Interfaces

Table 14-1 Network Interfaces

Category	Subcategory	Chassis Label
Wired ¹	Gigabit Ethernet (10/100/1000)	• RJ45
Wireless (WiFi)	802.11b/g Antenna	• Antenna

1. Category 5 or better. Maximum length: 328 ft (100 m). For any distance greater than 165 ft (50 m), we recommend that you use Category 5e or Category 6 certified Ethernet cabling. We do not ship any Ethernet cable with any DMP model. You must obtain this cable separately.

FAQs and Troubleshooting

- [FAQs, page 14-8](#)

FAQs

Q. What configuration errors might cause the following combination of symptoms to occur simultaneously?

- I cannot ping DMPs on my WLAN.
- I cannot open any instances of DMPDM for DMPs on my WLAN.
- Digital Signs software on my DMM appliance shows that DMPs are rea on my WLAN.
- I can deploy commands and assets from my Digital Signs software to DMPs in my WLAN.

A. It is likely that your DMPs are configured correctly. Please check for errors in the network security settings for your WLAN.

Q. What might prevent my DMPs from connecting to my WLAN or obtaining IP addresses?

A. The Broadcast SSID setting must be enabled on your wireless access points.

Q. Why did my DMPs lose their wireless network connectivity?

A. This can occur after you change SSID settings for your WLAN. Please restart your DMPs to restore their connections.

Q. Can I overcome the SSID broadcast requirement if I wait until my DMP is connected before I turn off the SSID broadcast?

A. No. Your DMP will lose its connection to your WLAN.

Q. What prevents my DMPs from receiving IP addresses even after they have associated to my WLAN access point?

A. This can occur whenever you change SSID settings for your WLAN. Please restart your DMPs to restore their connections.

Q. How can my wireless DMP use a static IP address?

A. Configure your wireless access point to assign the address.

Q. Why might I see references to TKIP after I configure my DMPs to use WPA2-EAP with AES CCMP?

- A.** This is a known issue. Although the Digital Signs software user interface might state that you use TKIP, your DMP uses WPA2-EAP with AES CCMP successfully, just as you configured it to do.
- Q.** Why might I see references to DHCP after I configure my DMPs to use static IP addresses on my WLAN?
- A.** This is a known issue. Although the Digital Signs software user interface might state that you use DHCP, your DMPs continue to use the static IP addresses that you configured.

Touchscreens, Projectors, and Displays

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 15-1](#)
- [Procedures, page 15-6](#)
- [Reference, page 15-29](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You manage and operate presentation systems that are connected to remote DMP endpoints.

Concepts

- [Overview, page 15-1](#)
- [Presentation System Concepts, page 15-2](#)

Overview

A DMP transmits signals to a public presentation system that you choose, such as a flat-panel display or projector that is connected to the DMP.

- This system might use projection or display technologies that are analog or digital.
- It might support Standard Definition (SD), High Definition (HD), or both.
- Its output fidelity depends in part upon which signal cables (and adapters) connect it to your DMP.
 - With most modern, digital presentation systems, you can use an HDMI cable for both video and audio. Other such systems—including the 40-inch and 52-inch models in our LCD Professional Series—might not connect until you combine the HDMI cable with an HDMI-to-DVI adapter for video. However, DVI does not support the transmission of audio signals. In this case, you can use the provided audio cable for audio.
 - When you use a Cisco-branded LCD display, a feature of Cisco Digital Signs software can detect automatically when your display is turned On or Off. **To connect one of these models to your DMP, you must use an RS-232 serial cable in addition to the video signal cable.**

Our centralized management features help you to manage a global IP network of digital signs for any purpose—in conference rooms, public venues, or executive offices.

Presentation System Concepts

- [Understand Which Displays Work Best with DMPs, page 15-2](#)
- [Understand How to Choose Media Signal Cables, page 15-3](#)
- [Understand and Prevent Image Retention \(Burn-in\), page 15-5](#)

Understand Which Displays Work Best with DMPs

We certify that DMPs work as designed with Cisco LCD flat-screen displays. All displays in this series are engineered for intensive use in public settings. See their technical documentation (CSCti35199) at http://cisco.com/en/US/products/ps10099/tsd_products_support_series_home.html.

In most cases, DMPs can use displays that comply with modern, international standards. We recommend the following if you must use a third-party display.

- **Digital, not analog.**
- **High-definition, not standard-definition.**
- **Professional-grade, not consumer-grade.** Digital signs and public IPTV installations run many more hours each day than a consumer-grade display is engineered to run. A consumer-grade system is likely to fail years sooner than a professional-grade system would under these circumstances.
- **LCD, not plasma.** Digital signage uses static images more often than it uses full-motion video. Most often, content is web-based or animated in Flash. The nature of these media types means that some pixels are not updated frequently in digital signage. LCDs are less susceptible to burn-in than plasma displays are. Even though image persistence is sometimes a problem on LCD displays, it is almost always self-correcting and is unlikely to occur when you follow manufacturer guidelines for managing your displays correctly.
- **Built-in support for RS-232 signalling.** This recommendation is important in direct proportion to the number of displays that you will manage.

Understand How to Choose Media Signal Cables

**Caution**

Poorly shielded cable can sometimes promote undesired signal leakage (*egress*), interference from over-the-air signals (*ingress*), or crosstalk between cables that are in close physical proximity.

Special considerations apply when you obtain a signal cable that is longer or of a different type than cables that we included in your product kit. For DMP models that support the following signal cable types, the maximum supported lengths are:

- Composite—10 ft (approximately 3 m)
- HDMI 1.1—16 ft (approximately 5 m)
- RCA—10 ft (approximately 3 m)
- S-Video—10 ft (approximately 3 m)
- SPDIF—10 ft (approximately 3 m)

**Note**

- **When image signals are transmitted through a composite cable, image quality suffers.** When you use a composite cable and your DMP shows any web-based media, small text might be difficult to read in TVzilla (the web browser that runs on some DMP models). To work around this limitation, you can lower the browser resolution setting in DMPDM.
- **Shockwave Flash (SWF) text is blurred during playback when a component video cable connects your DMP to its presentation system (CSCsx48899).** To work around this limitation, avoid the use of component video cable.

Cable Quality

The best signal cables objectively are those with the lowest signal resistance. Factors that affect signal resistance include wire gauge, cable shielding quality, and cable connector quality. However, the same materials and engineering designs that reduce signal resistance add to the cost of manufacturing. This added cost is passed along to a consumer. So, it is useful to understand when signal resistance is not relevant. Knowing this can help you to manage and reduce expenses without necessarily lowering your standards. High cost is not inevitable. Nor is it proof of high quality. Sometimes, in fact, high quality (low signal resistance) is irrelevant.

Even mediocre signal cables are sometimes sufficient, and such cables are often very affordable. [Figure 15-1](#) illustrates the most important factors to consider when you choose signal cables.

Figure 15-1 Signal Cable Purchasing Factors to Consider

Beyond the general guidelines that [Figure 15-1](#) illustrates, two additional factors might constrain which types of signal cable you can use.

- **The technology, brand, and model of your display**—Check its product documentation to understand its compatibility with various signal cable types.
- **Your DMP model**—See its datasheet at <http://www.cisco.com/go/dms/dmp/datasheets>. Also, your packing list states which signal cables Cisco planned to ship with your DMP.

- [Connect to a Touchscreen, page 15-8](#)

Understand and Prevent Image Retention (Burn-in)

After any LCD panel shows a fixed pattern for more than 12 hours, slight voltage differences can develop among electrodes that power the liquid crystals. Therefore, after you show a fixed image for an extended period of time, it might become blurred or might leave a residual image on an LCD display. This occurs when charged liquid crystal becomes “stuck” in one position.

Nonetheless, image retention should not occur when you follow our recommended best practices.

Turn off your display at regular intervals	<ul style="list-style-type: none"> • After using your display for 20 hours, turn it off for 4 hours. • After using your display for 12 hours, turn it off for 2 hours.
Rotate colors and color schemes at regular intervals	Cycle between colors every 30 minutes.
Avoid extreme differences in luminance	<ul style="list-style-type: none"> • Do not use foreground and background colors that differ greatly in their luminance. • Do not use gray. • Use bright colors that are identical in their luminance or that differ only slightly in their luminance. • Apply motion every 30 minutes to regions that show text. • Apply 1 minute of motion to any region that has shown a logo for 4 hours.
Use built-in features to prevent image retention	<p>Tip Some Cisco LCD models support these features while others do not. Check your Cisco LCD documentation.</p> <ul style="list-style-type: none"> • Use the Scroll feature to move a solid black bar up and down the display. <ul style="list-style-type: none"> – Set its interval in the range from 1 to 10 hours. We recommend a 1-hour interval. – Set its duration in the range from 1 to 5 seconds. We recommend a 5-second duration. • Use the Pixel Shift feature to move a dotted black rectangle from top to bottom. <ul style="list-style-type: none"> – Set its interval in the range from 1 to 10 hour. We recommend a 1-hour interval. – Set its duration in the range from 10 to 50 seconds. We recommend a 50-second duration. • Use the Bar feature to move a black crosshair around your display. <ul style="list-style-type: none"> – Set its interval in the range from 1 to 10 hours. We recommend a 1-hour interval. – Set its duration in the range from 10 to 50 seconds. We recommend a 50-second duration.

Procedures

Connect to a Digital Display or Projector

Timesaver

Is your display a touchscreen? If so, this topic is not for you. Instead, see the [“Connect to a Touchscreen”](#) section on [page 15-8](#).

HDMI and DVI differ in their support for audio signals and use connectors that are shaped differently, but otherwise are identical. Thus, an adapter can help you to connect to your DMP any presentation system that supports DVI but not HDMI. When you do this, however, you must also use a separate, additional signal cable to transmit audio signals, or playback will be silent.

Tip

Is playback silent even though your signal cable type is HDMI? If so, make sure that your DMP has attributed an authentically HDMI-standard resolution value—such as “HDMI_1080p60”—to your presentation system (CSCsk29797). The HDMI standard does not support audio playback through any system whose settings ignore or contradict HDMI standards. Thus, you cannot use HDMI to play audio through a presentation system whose resolution setting is, for example, “VESA_1360x768x60.”

Before You Begin

- Obtain an HDMI-to-DVI adapter if your presentation system uses DVI.

Procedure

Step 1 Do only one of the following.

- *Does your presentation system use HDMI?*

When you will use HDMI

- a. Connect the HDMI cable to the **HDMI** interface on the back panel of your DMP.
- b. Connect the other end of the cable to your presentation system.
- c. Proceed to Step 2.

- *Does your presentation system use DVI?*

When you will use DVI

- a. Connect the HDMI cable to the **HDMI** interface on the back panel of your DMP.
- b. Fasten an HDMI-to-DVI adapter to the free end of the cable.
- c. Connect the free end of the DVI adapter to the corresponding interface on your presentation system.
- d. Plug the 3.5mm audio jack into the **Audio** interface on the back panel of your DMP.
- e. Connect the other end of the audio cable to the corresponding interface on your presentation system.
- f. Proceed to Step 2.

Step 2 If the presentation system is not already turned on, turn it **On** now.

Step 3 Stop. You have completed this procedure.

Related Topics

- [Video and Audio Signal Interfaces, page 15-30](#)

Connect to a Touchscreen

**Tip**

Some touchscreens work as designed only after they are calibrated manually. If your touchscreen is one of these, its calibration occurs during a later stage of DMP setup. The list of related topics for this procedure states where you can learn about calibration.

DMP connections to a touchscreen are mostly the same as for other digital displays. However, touchscreens employ a special cable that supports interactivity through touch. This might be either an RS-232 serial cable or a USB cable, depending on the touchscreen model. Although some models support both cable types for interactivity, you can use only one type at a time.

Before You Begin

- Verify that your DMP model supports touchscreen technologies and that we support the touchscreen brand, model, and device driver that you will use.
- Check the documentation for your touchscreen to learn whether it requires a serial connection or a USB connection to your DMP, or if it supports both.

Procedure

Step 1 Do only one of the following.

- *Does your touchscreen use HDMI?*

When you will use HDMI

- a. Connect the HDMI cable to the **HDMI** interface on the back panel of your DMP.
- b. Connect the other end of the cable to your touchscreen.
- c. Proceed to Step 2.

- *Does your touchscreen use DVI?*

When you will use DVI

- a. Connect the HDMI cable to the **HDMI** interface on the back panel of your DMP.
- b. Fasten an HDMI-to-DVI adapter to the free end of the cable.
- c. Connect the free end of the DVI adapter to the corresponding interface on your touchscreen.
- d. Plug the 3.5mm audio jack into the **Audio** interface on the back panel of your DMP.
- e. Connect the other end of the audio cable to the corresponding interface on your touchscreen.
- f. Proceed to Step 2.

Step 2 Do only one of the following.

- *Does your touchscreen use USB?*

When touchscreen interaction relies on USB

- Connect a USB cable to the **USB** interface on the back panel of your DMP.
- Connect the other end of the cable to your touchscreen.
- Proceed to Step 3.

Note If your DMP model has only one USB connector, you might prefer to connect an external hard drive there for added local storage. In this case, an RS-232 serial cable would be the better choice for connecting a touchscreen to your DMP.

- *Does your touchscreen use RS-232?*

When touchscreen interaction relies on RS-232

- Connect an RS-232 serial cable to the **RS232** interface on the back panel of your DMP.
- Connect the other end of the cable to your touchscreen.
- Proceed to Step 3.

Step 3 Turn **On** the touchscreen.

Tip

Does a message on the touchscreen say that it must download a “characterization” file? This happens only when your touchscreen uses technologies from Elo TouchSystems and when you have never turned it On previously (or after its CF card is reformatted). When you see this message, please disregard it. The touchscreen will obtain its characterization file automatically during a later stage of DMP setup.

Step 4 Stop. You have completed this procedure.

Related Topics

- [Video and Audio Signal Interfaces, page 15-30](#)

Connect to an Analog Display or Projector

Tip

DMPs support connections to analog presentation systems. However, we recommend strongly that you use digital presentation systems whenever possible.

Procedure

Step 1 Make connections for video.

- Plug one yellow jack from the RCA video cable into the **CVBS** interface on the back panel of your DMP.
- Connect the free end of this cable to the corresponding interface on your presentation system.

- Step 2** Make connections for audio.
- a. Plug the 3mm jack on the RCA audio cable into the **AUDIO** interface on the back panel of your DMP.
 - b. Connect the free end of this cable to the corresponding interface on your presentation system.
- Step 3** If the presentation system is not already turned on, turn it **On** now.
- Step 4** Stop. You have completed this procedure.

Use RS-232 Signals to Control Presentation Systems

No international agency exists to tell all of the world's video equipment manufacturers which commands and methods (such as RS-232) a presentation system must support. Likewise, no global authority exists to state exactly which hexadecimal string—if any—must invoke a particular command.

So when manufacturers implement RS-232 commands, they do so as they see fit. Thus, RS-232 command syntax differs among manufacturers and sometimes differs even among equipment models that share a manufacturer in common.

Tip

Check the manufacturer's product documentation for your LCD display to learn about its RS-232 support and syntax.

So, how is RS-232 useful to me?

Your digital signs run in the real world because your organization expects to tell someone something. But when you, the administrator, are half a world away from a sign, or even just a few buildings away, how can you be *absolutely sure* that your sign is doing anything—let alone everything—correctly?

- Is its power turned Off when it should be turned On?
- Is its audio muted during an exclusive musical performance?
- Does it ignore a valid video input signal while listening on some other, but disconnected, interface?

Meanwhile, how can you recognize and fix any such misconfiguration from miles away? Situations like these are perfect for RS-232, whose technology passes properly constructed “command-and-control” instructions through a DMP and into its attached presentation system.

A case in point: Cisco Digital Signs software can tell you automatically and in real-time which of your centrally managed Cisco LCD displays are turned On or Off. You can learn at a glance when one (or more) of these remote units is in the wrong power state, and then issue a simple command to correct the mistake. But even so, your ability to turn remote equipment On or Off so easily through the Internet is just one benefit of feeding RS-232 commands through a DMP to its attached LCD display.

This section includes these topics.

Prepare Cisco Displays to Support RS-232 Syntax

Note

This material pertains to multiple Cisco LCD display models.

32-inch	40-inch	42-inch	47-inch	52-inch	55-inch
(LCD-100L-PRO-32N)	(LCD-100-PRO-40N)	(LCD-110L-PRO-42)	(LCD-110L-PRO-47)	(LCD-110-PRO-52S)	(LCD-110Q-PRO-55Q)

Individual Cisco LCD display models each support dozens of RS-232 commands, covering the range of their configurable features.

This topic explains various steps that you must complete before a Cisco LCD display supports RS-232 signaling for centralized management.

Before You Begin

- Connect your Cisco LCD display to the DMP that will drive it.
- Plug in your LCD display and turn it On.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 Use one of these methods, at your discretion, to limit the scope of what the DMP List table shows to you.

- *Limit the scope by filtering.* (Optional)

When you will filter against an attribute value

- Choose a DMP attribute type from the Filter list.
You can filter by DMP name, description, IP address, MAC address, or any other supported attribute.
- Enter an actual value to filter against the attribute type that you chose.
Had you chosen to filter against the Description attribute, for example, you might now enter a word like **'classroom'** or **'billboard'** as the value to match.
- Click **Go**.
- Proceed to Step 3.

- *Limit the scope by browsing.* (Optional)

When you will browse by DMP group

- Browse in the DMP Groups tree to restrict what the DMP List table shows.
- Proceed to Step 3.

Step 4 Click one DMP in the table to choose it exclusively.

OR

Use check boxes to choose multiple DMPs whose attached presentation systems are all identical.

Step 5 Click **Run Task**, above the DMP List table.

Step 6 Click **RS-232: Control supported, non-DMTech displays** in the System Tasks drawer.

Step 7 Click **OK**.

A message confirms that DMM received your submission.

Step 8 Choose **Digital Media Players > Advanced Tasks > DMP Polling Status Control**.

Step 9 Click **Add New Application**.

- a. Choose your Cisco Professional Series LCD display model from the TV Type list.

Note **This variation of our standard TV Type list includes Cisco models exclusively.** These are the only presentation system models whose electrical power On/Off state this Cisco DMS release can poll in real-time.

ALSO: *Is your Cisco LCD display the 32-inch model?* If so, see the “Do you use our 32-inch LCD display?” section, elsewhere in this procedure. It might be necessary for you to disable a feature that all other users enable.

- b. Choose **On** from the Polling list, and then click **Submit**.

We generate a concise name for this application automatically. We are able to do this because your selections have already defined the purpose and scope of your new polling control application. Its generated name is always one of these:

- **CISCO_32N=on**
- **CISCO_40N=on**
- **CISCO_42L=on**
- **CISCO_47L=on**
- **CISCO_52S=on**
- **CISCO_55Q=on**

After we show the name to you, your new polling control application is ready for use.

Step 10 Click **Run Task**, again.

Step 11 Click **DMP Polling Status Control** in the Advanced Tasks drawer.

Step 12 Click the same “=on” application that you saved for your Cisco LCD model, and then click **OK**.

A message confirms that DMM received your submission.

Note **As many as 5 minutes might pass before the LCD Status column updates its value to show the real-time power state of your Cisco LCD display.** Ultimately, this value will say either “Display On” or “Display Off.” Until then, however, it will say “Not Set.”

Please check the next step in this procedure, however, to learn if another step is necessary here to configure your LCD Professional Series model.

Step 13 Compensate, as needed, for model-specific exceptions to basic RS-232 setup.

- *Do you use our 42-inch or 47-inch LCD display?* **When you will poll the On/Off status of a 42- or 47-inch Cisco LCD display**
 Factory-default settings for this equipment save power by turning Off most of its support for remote management and polling. Almost any attempt to use such features can fail while the energy-saving settings remain in effect.¹ **So, before you can reliably manage or poll this equipment from Cisco DMS, YOU² MUST explicitly prepare the RS-232 service for use.** Later, at your discretion, you can either turn Off³ this support or leave it turned On⁴ continuously.
 - a. Press **Menu** on the handheld remote control unit.
Your LCD display shows its OSD menu.
 - b. Use buttons on the remote control to choose **Option > Set > Set ID**, and then change the Set ID value (from “Off”) to **1**.
 - c. Press **Exit** on the remote control.

1. CSCts44188; CSCtl83984.
2. Or the on-site operator for this equipment.
3. Which decreases power consumption but complicates remote management.
4. Which simplifies remote management but increases power consumption.

Bootstrap DMTech Displays to Enable Their RS-232 Support

You can use our Digital Signs software to transmit instruction codes through your DMPs, and into their attached presentation systems.

Note

We do not maintain or control the RS-232 commands for any third-party equipment. Please check the manufacturer documentation for your non-Cisco presentation systems to learn which RS-232 strings are engineered to manage them.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 Use one of these methods, at your discretion, to limit the scope of what the DMP List table shows to you.

- *Limit the scope by filtering.* (Optional)

When you will filter against an attribute value

- a. Choose a DMP attribute type from the Filter list.
You can filter by DMP name, description, IP address, MAC address, or any other supported attribute.
- b. Enter an actual value to filter against the attribute type that you chose.
Had you chosen to filter against the Description attribute, for example, you might now enter a word like **'classroom'** or **'billboard'** as the value to match.
- c. Click **Go**.
- d. Proceed to Step 3.

- *Limit the scope by browsing.* (Optional)

When you will browse by DMP group

Use RS-232 Syntax to Control Digital Signs

You can add and edit RS-232 commands that operate LCD displays or other presentation system types.

Before You Begin

- Prepare your displays for centralized management via RS-232 commands.
- Activate RS-232 command access for your displays.

Procedure

- Step 1** Click **Network and Endpoints**.

- Step 2** Choose **Digital Media Players > Advanced Tasks**.
- Step 3** Click **System Tasks** in the Application Types list.
- Step 4** Do one of the following.

- *Are you adding (creating) a command?* **When you will define and save a new RS-232 command**
 - Click **Add New Application**.
The page is refreshed so that you can choose options and enter values.
 - Enter a name.
 - Choose **Set** from the Request Type list.
 - Enter an RS-232 command string in the Request field.

- Are you editing a command that you saved previously?
 - When you will edit a saved command**
 - a. Find your editing target in the Applications table.
 - b. Click its named row in the Applications table.
 - c. Click **Edit Application**.
 - The page is refreshed so that you can choose options and enter values.
 - d. As needed:
 - Edit the name.
 - Edit the RS-232 command string in the Request field.

For example, the hexadecimal strings in [Table 15-1](#) convey many of the RS-232 commands that you can send in this way to a Cisco LCD Professional Series display.

Table 15-1 RS-232 Commands to Manage Cisco LCD Displays

1. An image with a colorfulness value of zero percent is grayscale, while the same image with a colorfulness value of 100 percent has vivid colors.
2. The display ignores its handheld remote control but still responds to other commands.
3. The display ignores its built-in buttons but still responds to other commands.
4. Control the display exclusively through your DMP. Neither the handheld remote control nor buttons on the display can override your off-site management.

Step 5 Set other, optional values as needed.

Step 6 Click **Submit** to save your work, so that you might someday use it.

OR

Click **Cancel** to discard your work.

Step 7 Stop. You have completed this procedure.

What to Do Next

- *Would you like to **delete** a saved command?*
Proceed to the [“Delete Equipment Settings That Use RS-232 Syntax”](#) section on page 15-20.

Delete Equipment Settings That Use RS-232 Syntax

You can delete any of your named and saved RS-232 command strings.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > Advanced Tasks**.

Step 3 Click **System Tasks** in the Application Types list.

Step 4 Find your editing target in the Applications table.

Step 5 Click its named row in the Applications table.

Step 6 Click **Delete Application**.

Step 7 Click **Submit** to commit this deletion.

OR

Click **Cancel** to abandon this deletion.

Step 8 Stop. You have completed this procedure.

Prepare a 40- or 52-inch Cisco LCD to Support Centralized Management through DVI

Note

Only our 40-inch and 52-inch LCD display models support DVI connections.

When you use an HDMI cable or a DVI cable to connect your DMP to a 40- or 52-inch Cisco LCD display, you can use Digital Signs to centrally manage the LCD display.

When unmodified HDMI is the connection type from a DMP to either of these display models, centralized management from DMM works immediately, without any prerequisites. However, when you combine HDMI with a DVI adapter, you must complete a simple task **at the physical installation site** for your display before you can start to centrally manage it.

Before You Begin

- Activate RS-232 command access for your 40-inch or 52-inch display.

Procedure

Step 1 Press **Menu** on the remote control for your 40-inch or 52-inch LCD display.

OR

Press **Menu** on the LCD display front panel.

Step 2 Choose **Input > Source List > DVI**, and then press **Enter**.

Step 3 Choose **Input > Edit Name > DVI > HD STB**, and then press **Enter**.

Step 4 Stop. You have completed this procedure.

Use Simple Menus to Control A/V Settings

You can define and save a customized bundle of device configuration settings for certain popular presentation system models. We provide this option for models that pass our tests for DMP compatibility.

Procedure

Step 1 Do one of the following.

- *Would you prefer to start from your DMP inventory?*

When you will start from your DMP inventory

a. Click **Network and Endpoints**.

b. Choose **Digital Media Players > DMP Manager**.

c. Choose an option from the Filter list to restrict which DMPs the table describes.

OR

Browse in the DMP Groups tree to restrict which DMPs the table describes.

d. Click a DMP in the table to choose it.

OR

Use check boxes to choose multiple DMPs whose attached presentation systems are identical.

e. Click **Control TV**, above the DMP List table.

f. Proceed to [Step 2](#).

- *Would you prefer to start from your collection of advanced tasks?*

When you will start from your collection of advanced tasks

- Click **Network and Endpoints**.

- Choose **Digital Media Players > Advanced Tasks**.
- Click **DMP Display Controls** in the Application Types list.
- Click **Add New Application**.

The page is refreshed so that you can choose options and enter values.

- Proceed to [Step 2](#).

Step 2 Choose your display's make and model from the TV Type list.

Note We provide preconfigured tasks for only the presentation system models that pass our tests for DMP compatibility.

Step 3 Enter a name for the bundle of device configuration settings that you are about to define.

Step 4 Set values for video attributes.

Step 5 Set values for audio attributes.

Step 6 Set other, optional values as needed.

Step 7 Click **Submit** to save your work, so that you might someday use it.

OR

Click **Cancel** to discard your work.

Step 8 Stop. You have completed this procedure.

- IEEE 802.3af interface with integrated switching regulator.
- Category 5 or better. Maximum length: 328 ft (100 m). For any distance greater than 165 ft (50 m), we recommend that you use Category 5e or Category 6 certified Ethernet cabling. For installation behind walls, we recommend plenum-rated cabling unless it does not satisfy the requirements set forth in your regional building code. **We do not ship any Ethernet cable with any DMP model.** You must obtain this cable separately.
- Wake-on-LAN.
- Supporting EAP-FAST, WEP, WPA, and WPA2.
- For maximum supported media signal cable lengths, see the [“Understand How to Choose Media Signal Cables” section on page 15-3](#). Each video and audio signal cable that we ship with DMPs is 6 ft (approximately 1.83 m) long.
- Backward-compatible to HDMI 1.1.
- Use an S-Video signal cable with a YPbPr-to-S-Video adapter to transmit and receive YPbPr data signals.
- Although there is no Composite CVBS connector on a DMP 4310G, its YPbPr/S-Video connector supports Composite CVBS when you use an S-Video-to-Composite adapter.
- Stereo audio output, irrespective of the cable type for video output.
- Your DMP remote control (sold separately) cannot mute audio output from the SPDIF interface.
- Maximum distance from remote control to DMP is 15 ft (5 m). The IR sensor’s signal coverage range extends from 45° left to 45° right.
- Maximum USB cable length is 15 ft (approximately 5 m).
- The expected use is one USB connection for a touchscreen and the other for an external data storage device.

Navigation Path

Either of these:

- Network and Endpoints > Digital Media Players > DMP Manager > Control TV
- Network and Endpoints > Digital Media Players > Advanced Tasks > DMP Audio/Video Settings

Table 15-3 Elements for Menu-driven Settings

Element	Description
TV Type	Choose the manufacturer and the model. Tip Other elements on this page: <ul style="list-style-type: none"> • Are not available until after you choose an option from this list. • Vary according to your choice from this list.
Name	A unique and human-readable name for these settings. It is unique in the sense that you have not used it previously as the name for anything that can be scheduled. You must enter a name.
Description	A brief description. The description is optional.
Contrast	A contrast setting value in the range from 0 to 100. Set the contrast. Then, check Apply .
Brightness	A brightness setting value in the range from 0 to 100. Set the brightness. Then, check Apply .
Sharpness	A sharpness (clarity) setting value in the range from 0 to 100. Set the sharpness. Then, check Apply .
Color	A color setting value in the range from 0 to 100. Set the color. Then, check Apply .
Tint	A tint setting value in the range from 0 to 100. Set the tint. Then, check Apply .
TV Channel	An analog TV signal frequency value in the range from 0 to 99. Set the signal. Then, check Apply .
Audio Volume	An audio volume level setting value in the range from 0 to 100. Set the volume. Then, check Apply .
Mute	Choose whether to mute your presentation system.
Input	Choose the method that corresponds to your video signal cable, such as HDMI or S-Video.
Power	Choose whether to power your presentation system.

Table 15-3 Elements for Menu-driven Settings (continued)

Element	Description
Cisco Displays Only	
Safety Lock	<ul style="list-style-type: none"> Choose On to lock the front panel controls and the remote control buttons for your LCD Professional Series display. When anyone at its physical location presses buttons on the remote control or uses controls on the display front panel while they are locked, an on-screen message explains that the lock is engaged. There is no effect when anyone at its physical location uses the remote control unit to enter the safety lock PIN. Choose Off to unlock these controls. It does not matter how you locked them. When you use Digital Signs to remotely unlock the remote control unit and controls on the display front panel, it is not necessary to enter the safety lock PIN. <p>Note Any option that you choose from this list clears your choice, if any, in the Remote Control Lock and Panel Lock lists. You can choose only one option among all three of these lists, which are hidden unless you chose CISCO_40N or CISCO_52S from the TV Type list.</p>
Remote Control Lock	<ul style="list-style-type: none"> Choose On to lock the remote control unit for your LCD Professional Series display. When anyone at its physical location presses buttons on the remote control while it are locked, an on-screen message explains that the lock is engaged. There is no effect when anyone at its physical location uses the remote control unit to enter the safety lock PIN. Choose Off to unlock the remote control. It does not matter how you locked it. When you use Digital Signs to remotely unlock a remote control, it is not necessary to enter the safety lock PIN. <p>Note Any option that you choose from this list clears your choice, if any, in the Safety Lock and Panel Lock lists. You can choose only one option among all three of these lists, which are hidden unless you chose CISCO_40N or CISCO_52S from the TV Type list.</p> <p>Tip Alternatively, anyone at its physical location can use the remote control unit to unlock front panel controls on your LCD Professional Series Display, by entering the safety lock PIN correctly when prompted to enter it.</p>

Network and Endpoints > Digital Media Players > Advanced Tasks > DMP Audio/Video Settings

Table 15-4 Elements to Manage DMP A/V Settings

Element	Description
Name	A unique and human-readable name for these settings. It is unique in the sense that you have not used it previously as the name for anything that can be scheduled. You must enter a name.
Description	A brief description. The description is optional.
Brightness	The setting to compensates for deficiencies in on-screen brightness. Brightness compensation values can range from –128 to 127.
Contrast	The setting to compensate for any deficiencies in on-screen contrast. Contrast compensation values can range from 0 to 255. The default is 128.
Saturation	The setting to compensate for any deficiencies in on-screen color saturation. Saturation compensation values can range from 0 to 255. The default is 128.
Left Audio Channel Volume	The setting to control how loudly or softly your DMP outputs sound in the left audio channel. Volume can range from 0 to 100, where 0 is silent. The default is 50.
Right Audio Channel Volume	The setting to control how loudly or softly your DMP outputs sound in the left audio channel. Volume can range from 0 to 100, where 0 is silent. The default is 50.

FAQs About Cleaning and Maintenance

- *How should I clean and maintain a Professional Series display?*

Q. How should I clean and maintain a Professional Series display?

A. For cleaning and maintenance guidelines, see the Safety Instructions section called “Cleaning the Display, Its Plug, and Its Outlet Safely” in *User Guide for Cisco LCD Professional Series Displays* on Cisco.com.

FAQs About Daily Operation

- *How long does display autodetection take?*
 - *Why might display autodetection fail?*
- Q.** How long does display autodetection take?
- A.** Autodetection takes less than 8 seconds in most cases and less than 2 seconds in some cases.
- Q.** Why might display autodetection fail?
- A.** The display autodetection feature fails unless you use an HDMI signal cable (with or without a DVI adapter) to connect a presentation system to your DMP.

FAQs About RS-232

- *Why does my DMP 4400G run very slowly while its RS-232 features are enabled?*
- Q.** Why does my DMP 4400G run very slowly while its RS-232 features are enabled?
- A.** The likeliest explanation is that your signal cable is faulty. Try substituting the equivalent cable from a DMP that operates as expected when RS-232 features are enabled. If doing this has no effect, restore your DMP to its factory-default settings and then configure it once more to support RS-232.

FAQs About Touchscreens

- *What should I do when a message states that my touchscreen must download a characterization file?*
 - *When is it necessary to repeat the calibration of a touchscreen?*
 - *What can cause a properly calibrated touchscreen to operate as if it is not calibrated?*
- Q.** What should I do when a message states that my touchscreen must download a characterization file?
- A.** Do not disturb or interrupt the automated process. It occurs only once, and takes approximately 10 minutes to finish. When it is finished, your touchscreen will clear the message automatically.
- Q.** When is it necessary to repeat the calibration of a touchscreen?
- A.** You must repeat this calibration whenever you:
- Rotate a touchscreen or change its resolution.
 - Replace a touchscreen.
- Q.** What can cause a properly calibrated touchscreen to operate as if it is not calibrated?
- A.** If this happens to you, unplug the serial cable (or USB cable) that connects this touchscreen to your DMP. Then, plug that cable back in again.

FAQs About Product Quality

- *Why are some pixels unexpectedly bright, or black?*
- Q.** Why are some pixels unexpectedly bright, or black?

- A.** Cisco LCD displays use advanced semiconductor technology with extremely high precision. Nonetheless, the red, green, blue and white pixels might seem unexpectedly bright sometimes, or you might notice some black pixels. This is not the result of low quality or a malfunction and you can continue to use your display without incident.

Troubleshoot Cisco Professional Series LCD Displays

- [Troubleshoot the Power Indicator, page 15-40](#)
- [Troubleshoot Image Quality, page 15-40](#)
- [Troubleshoot Audio Quality, page 15-41](#)
- [Troubleshoot the Handheld Remote Control Unit, page 15-41](#)
- [Run a Diagnostic Self-Test on a 40- or 52-inch Cisco LCD Display, page 15-41](#)

Troubleshoot the Power Indicator

Problem The screen is blank AND the power indicator is off.

Solution Ensure that the power cord is firmly connected and the display is turned on.

Problem The power indicator blinks.

Solution Wait for less than 1 minute. The display is saving changes made to its settings.

Troubleshoot Image Quality

Problem A message states, “Check Signal Cable.”

Solution Make sure that the:

- Signal cable is firmly connected to the video sources.
- Video sources are turned on.

Problem The image rolls vertically.

Solution Make sure that the signal cable is securely connected.

Problem The image is intermittently black (CSCtw78742; CSCts83613).

Solution Avoid incompatible combinations.

- Have you used a DVI connector while our HDMI resolution autodetect feature was enabled on your DMP? And then, was the reported resolution called “1920 x 1080?” If so, you must disable the autodetection feature. Cisco DMP models support DVI connections only in combination with VESA-standard resolution values—and VESA standards do not include “1920 x 1080.” Instead, their equivalent is called “VESA_1080p.” You must choose and apply this resolution value manually.
- Do not enable HDMI autodetection with a display whose resolution is “DVI_1920p.”
- Disable our HDMI resolution autodetect feature on your DMP when it reports that any 1080p presentation system characterizes its resolution as “VESA_1080p.” Then, impose the resolution value manually that DMPs use: “HDMI_1080p.”

Problem The image is blurred.

Solution Try these possible workarounds.

- Run Frequency Coarse and Fine tuning.
- Turn Off the display, remove its accessories and signal cables, and then turn it On again.
- Set the resolution and frequency to the recommended ranges.

Problem The image is too light OR too dark.

Solution Adjust the brightness and contrast.

Problem Colors are not consistent, OR shadows are too dark, OR white areas are too white.

Solution Adjust the color.

Troubleshoot Audio Quality

Problem Sound is too quiet OR is not audible.

Solution Check the volume level.

Problem Sound frequency is too high OR too low.

Solution Check the levels for treble and bass.

Troubleshoot the Handheld Remote Control Unit

Problem Buttons do not respond.

Solution Check...

- Battery polarities (+/-).
- If batteries have lost their charge.
- If the power is turned On.
- If the power cord is connected securely.
- If a fluorescent or neon lamp is turned On nearby.

Note When you use Digital Signs to lock your remote control and the front panel controls for your display, the remote control cannot unlock them. Instead, you must switch the Safety Lock, Remote Control Lock, and Panel Lock toggles all to Off in Digital Signs.

Note When you use Digital Signs to lock your remote control, the remote control cannot unlock itself. Instead, you must switch the Safety Lock and Remote Control Lock toggles both to Off in Digital Signs.

Run a Diagnostic Self-Test on a 40- or 52-inch Cisco LCD Display

Procedure

Step 1 Turn Off your display and turn Off every device connected to it.

Step 2 Disconnect all devices from your display.

Step 3 Turn **On** your display.

The self-test runs immediately.

- **PASS**—The LED power indicator remains green.
- **FAIL**—An on-screen message moves around on the screen, which says “Check Signal Cable.”

Step 4 Stop. You have completed this procedure.

DMP User Permissions (Authorization)

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 16-1](#)
- [Procedures, page 16-3](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You want to manage access rights precisely for particular uses of particular DMPs.
-

Concepts

- [Overview, page 16-1](#)
- [Scenarios That Illustrate Typical User Permissions, page 16-1](#)

Overview

After you assign users to the “Digital Signage Users” group in the Administration module at Administration > Users, you can manage their access rights and permission levels in the Network and Endpoints module at Network and Endpoints > Settings > User Accounts.

You can restrict the permissions that you grant to particular user accounts in DMM. For example, you might grant a user the permission to use only the advanced tasks that you choose or to deploy presentations to only the DMPs that you choose.

Note

Each Cisco Cast user must have at least read-only permission to the “Cast” application, which pertains to the electronic program guide.

Scenarios That Illustrate Typical User Permissions

We provide four simple user permission sets that you can assign to users with a click.

- [Scenario A: Basic Administrator Permissions, page 16-2](#)
- [Scenario B: Basic Network and Endpoint Permissions, page 16-2](#)

- [Scenario C: Basic Content Permissions, page 16-2](#)
- [Scenario D: Basic Reporting Permissions, page 16-3](#)

Scenario A: Basic Administrator Permissions

Check the **Administrator** check box at Network and Endpoints > Settings > User Accounts to grant a selected user the authority to use all four DMM modules.

Administrator Provides access to all modules	<input checked="" type="checkbox"/>
--	-------------------------------------

Scenario B: Basic Network and Endpoint Permissions

Check the **Network** check box at Network and Endpoints > Settings > User Accounts to grant a selected user the authority to manage your digital signage network equipment and settings.

Network <input checked="" type="checkbox"/> Enable people to manage DMPs and DMP groups, configure system settings, and run emergencies.
--

Alternatively, you can use the Network toggle () to reveal more granular permissions.

Network <input checked="" type="checkbox"/> Enable people to manage DMPs and DMP groups, configure system settings, and run emergencies.					
	All	Create	Read	Write	Delete
Rights to manage All DMP Groups View the DMP hierarchy to set permissions for specific DMP groups	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Scenario C: Basic Content Permissions

Check the **Content** check box at Network and Endpoints > Settings > User Accounts to grant a selected user the authority to manage your content.

Content <input checked="" type="checkbox"/> Enable people to work with Media Library, Channels and Cast. To enable someone to schedule and publish channels, grant them access to Publishing and Application Types.

Alternatively, you can use the Content toggle () to reveal more granular permissions.

Content <input checked="" type="checkbox"/> Enable people to work with Media Library, Channels and Cast. To enable someone to schedule and publish channels, grant them access to Publishing and Application Types.					
	All	Create	Read	Write	Delete
Rights to manage All Assets Select Specific Asset Categories to set permissions for specific asset categories	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rights to manage All Applications Select Specific Application Types to set permissions for specific applications	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Rights to publish to All DMP Groups View the DMP hierarchy to set permissions for specific DMP groups	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Scenario D: Basic Reporting Permissions

Check the **Reports** check box at Network and Endpoints > Settings > User Accounts to grant a selected user the authority to manage your proof-of-play reports.

Alternatively, you can use the Reports toggle () to reveal more granular permissions.

Procedures

- [Configure User Rights and Permissions, page 16-3](#)

Configure User Rights and Permissions

Before You Begin

- To see and use the Settings tab, you must be logged in an administrator.

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Choose **Settings > User Accounts**.

Step 3 Click a username to highlight it in the Users list.

We then show you this user's currently assigned permissions.

Step 4 Choose options to increase or reduce any of the user's permissions.

Step 5 Click **Submit**.

Step 6 Stop. You have completed this procedure.

Media Assets and Embedded Software

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 17-1](#)
- [Procedures, page 17-10](#)
- [Reference, page 17-14](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will populate and manage a library of DMP-compatible media assets for playback, as well as firmware and kernel files that expose and expand upon DMP features.
-

Concepts

- [Overview, page 17-1](#)
- [Restrictions, page 17-1](#)
- [Understand HTTP 'HEAD' Request Timeout, page 17-7](#)

Overview

To simplify management, you can organize your assets for *Cisco Digital Signs* and *Cisco Cast*.

We recommend that you create categories for sets of characteristics that your assets have in common—such as their file type, intended audience, or genre.

Restrictions

- [User Permission Restrictions, page 17-2](#)
- [Media Restrictions, page 17-2](#)
- [File Size and Storage Restrictions, page 17-5](#)

User Permission Restrictions

- To see and use the Media Library, you must be logged in with at least read-only permissions for at least one category.
- The “ftp” user account on a DMP has limited access to the DMP file directory structure. It cannot navigate to any higher level than /tmp/ftproot. This is by design (**CSCsq49612**).

Media Restrictions

- [Audio-Video Sync on a DMP 4305G, page 17-2](#)
- [Misidentified Codecs Can Trigger a Gray Screen, and Then Restart a DMP 4310G, page 17-2](#)
- [Component Signal Cables Prevent DMP 4310G Playback of 1080p60 Video, page 17-3](#)
- [SDP Support and Restrictions, page 17-3](#)
- [Shockwave Flash \(SWF\) Support and Restrictions, page 17-4](#)
- [MP3 Support and Restrictions, page 17-4](#)
- [MPEG-4 Support and Restrictions, page 17-4](#)
- [Bitmapped/Raster Image \(JPG, GIF, PNG\) Support and Restrictions, page 17-4](#)
- [URL and Website Support and Restrictions, page 17-5](#)

Audio-Video Sync on a DMP 4305G

- In some cases, after a DMP 4305G plays a multicast video stream for 24 hours, audio and video from the stream are no longer perfectly synchronized. (**CSCsy37539**; **CSCty77956**)
- When a DMP 4305G is restarted, video playback might begin even before the DMP has cleared its splash screen (**CSCtb48195**). Although audio plays correctly in this case, the lingering splash screen hides a video temporarily.

Tip

You can use **DMPDM** to shorten the splash screen duration.

Misidentified Codecs Can Trigger a Gray Screen, and Then Restart a DMP 4310G

A misconfigured or malfunctioning encoder might output video in which the PMT table names a different codec than was used. When you then try to play this asset through a DMP 4310G, the DMP might restart suddenly after rendering only a gray screen on your digital sign (**CSCth61274**).

Tip

You can use **free or open source software**—such as **MediaInfo** (see <http://mediainfo.sourceforge.net/en>)—to check if the **PMT table is wrong**. If so, you can use other tools to re-encode or transcode the video properly for playback.

A DMP 4400G Might Not Output Audio After Finishing the Playback of a WMV File

After a DMP 4400G renders a Windows Media video asset for playback, you might find that subsequent assets play without any audible sound (**CSCtb09480**). Our testing suggests that this behavior can occur only when encoding of the WMV asset's audio track has combined lossy compression with the following attributes.

- Format: WMA
- Codec ID: 162
- Codec Info: Windows Media Audio 3

Tip

You can use free or open source software—such as MedialInfo (see <http://mediainfo.sourceforge.net/en>)—to check if the audio track is encoded like this. If so, you can use other tools to re-encode or transcode the audio properly for playback.

Component Signal Cables Prevent DMP 4310G Playback of 1080p60 Video

When a Component Video signal cable connects your DMP 4310G to its presentation system, the DMP cannot render 1080p60 (progressive-scan) video for playback (**CSCtf01345**). However, the DMP 4310G in this case can render 1080i60 (interlaced-scan) video correctly.

SDP Support and Restrictions

We support ECDS live streams for digital signage, through the use of SDP files. However, our support for SDP is limited.

- We can play MPEG-TS/RTP/UDP multicast streams over Cisco ECDS networks when the multicast host is a Cisco MDE 1100.
- Alternatively, we can play other MPEG-TS/RTP/UDP multicast streams whose protocol is HTTP.
- The SDP file must be generated by Cisco ECDS.

We do not support SDP optional values **e**, **k**, **p**, **r**, **u**, or **z**. Nor do we support **SAP**.

Note

When you tell DMM the location of an SDP file on an ECDS server, you must enter the ECDS Delivery Service "Service Routing Domain Name." Do not enter the real host FQDN or the real host IP address.

Also, you must specify the TCP port.

Shockwave Flash (SWF) Support and Restrictions

Note

This release does not support audio in Shockwave Flash media. If your media library contains any Shockwave Flash files that use audio, their playback will be silent.

- The filename extension must be SWF and you must enter the estimated duration.
- On a DMP 4305G, avoid playing MP3 audio at the same time as a SWF. Otherwise, the SWF plays approximately 50 percent slower than it should. The cause is a hardware limitation. (CSCty77918; CSCtg15314)
- When a SWF asset has a memory leak that depletes DMP memory, the DMP will not necessarily reboot automatically, as it is designed to do in some other low-memory scenarios. Instead, if you have enabled DMP failover (content substitution) and if the alternative content is loadable, your DMP will load it. But if this attempt fails, your DMP will restart itself automatically, as it does in those other low-memory scenarios. (CSCty84687; CSCtt29360; CSCtw90991)

MP3 Support and Restrictions

- This release does not support DMP playback of any MP3 file that contains embedded cover art (CSCtw78806).
- This release does not support DMP 4305G playback of any MP3 file with a 24000 sample rate (CSCtb79824).
- On a DMP 4305G, avoid playing MP3 audio at the same time as a SWF. Otherwise, the SWF plays approximately 50 percent slower than it should. The cause is a hardware limitation. (CSCty77918; CSCtg15314)

MPEG-4 Support and Restrictions

Our support for MPEG-4 requires that you use the MPEG-4 Part 2 or Part 10 (H.264) codec and that you multiplex audio and video in an MPEG-2 Transport Stream.

- When your DMP is a 4400G, we support MPEG-4 Part 10/H.264 video in MPEG-2 TS.
- Neither the 4300G nor the 4305G supports MPEG-4 Part 10/H.264.

The filename extension must be MPG or MPEG and you must enter the estimated duration.

Bitmapped/Raster Image (JPG, GIF, PNG) Support and Restrictions

- A DMP 4305G in this release does not support use of PNG images.
- The maximum supported file size per bitmapped image asset is 450 KB on a DMP 4305G and 1 MB on a DMP 4400G.
- When your designs for digital signage call for an image with fixed dimensions, such as 640 x 480, import a bitmap asset of exactly these dimensions. Do not import a larger or smaller version. Otherwise, your DMP must resize the wrong-sized bitmap on-the-fly for rendering. This work is computationally expensive, and degrades DMP performance over time. (CSCtx99460; CSCty83930)

URL and Website Support and Restrictions

- The URL for a media asset cannot be any more than 128 characters long. (CSCts62766)
- To render a Twitter page correctly on your digital sign, do not add the Twitter page URL to your media library. Instead, use the Go To URL system task. Otherwise, the dynamic center column on the Twitter page, which is coded to refresh itself every 2 seconds, is blank. (CSCtw78817)
- DMPs cannot render webpages from servers that use self-signed certificates (CSCtt01371).
- Some webpages with embedded SWF content use JavaScript code that includes multiple `getElementById()` calls or multiple timers, such as `setDuration` or `setInterval`. After a DMP 4305G renders such pages continuously for as little as 12 hours, the DMP can run out of memory and reboot automatically, or it might render only a white screen instead of the SWF. Such cases are the combined result of a Flash 7 memory leak and an over-reliance on JavaScript. (CSCsy01098; CSCty77900)

File Size and Storage Restrictions

- The media library can store assets for your digital signs temporarily on the same disk partition that DMM uses for webserver swap space (CSCsi66683; CSCtt27032). If this entire partition becomes filled before your media library can move its assets to their permanent location:
 - **LICENSE VERIFICATION MIGHT FAIL**, preventing any access to UI pages for licensed features.
 - **LICENSE INSTALLATIONS MIGHT FAIL** with a spurious message that a license is not valid.
 - **UPLOAD OF ADDITIONAL ASSETS MIGHT FAIL.**
 - **CHARTING SERVICES MIGHT FAIL.**
 - **ANY OTHER SERVER OPERATION MIGHT FAIL** that requires swap or temp space.

**Tip**

So, before you bulk-import assets, use the DMS-Admin dashboard to check available space!

- Before you add any asset, confirm that its file size is not more than 1.9 GB, which is the maximum stream size for any asset that you include in the layout for a DMD presentation.
- For purposes of stage-one failover, the combined size of all assets cannot exceed the capacity of the SD card in a DMP.

Local Storage Restrictions

- [Locally Stored Presentations Should Not Include Remote Assets, page 17-6](#)
- [Local Storage Restrictions for DMP 4310G, page 17-6](#)

Locally Stored Presentations Should Not Include Remote Assets

We recommend as a best practice that you avoid calling upon any remote assets from a playlist or presentation to you store locally to a DMP. Otherwise, any network disruptions will interfere with playback of media that should be impervious to all such disruptions.

Local Storage Restrictions for DMP 4310G

A DMP 4310G that uses an attached USB storage volume might corrupt or erase data on this attached volume. Likewise, a DMP 4310G might lose its ability to mount this attached volume. After the DMP reaches this general state, it sometimes reports incorrectly that the attached volume is still mounted and working.

These problems can occur when you disconnect the external volume from the upper USB interface on a DMP 4310G and then, without any delay, plug it immediately into the lower USB interface on the same DMP. However, these problems do not occur in every such case. In our tests, they occurred approximately 1 percent of the time.

To reduce your possible exposure to these problems, wait no less than 3 seconds after you connect or disconnect an attached volume, before you do the reverse. In our tests, this best practice eliminated the risk.

Restart the DMP if it merely unmounts its attached volume.

There is no workaround after the attached volume is erased or its data becomes corrupted. All that you can do after the fact is reformat the volume and restore its data from a recent backup.

Understand HTTP 'HEAD' Request Timeout

Before it tries to download content from a webserver, your DMP first makes sure that the content exists at its expected address. Your DMP starts this validation by sending the webserver what's called an *HTTP HEAD* request. Then, when the webserver responds within a configurable interval (10 seconds, by default) to verify that the expected address is valid, your DMP sends an *HTTP GET* request that triggers the actual download.

Note

This configurable interval is based on the "Failover Timeout (ms)" value in DMPDM. Therefore, this value has a powerful effect on your digital signs even when content failover is disabled. It is the maximum duration that can elapse before your DMP sends an HTTP GET request.

- [Timeout Benefit, page 17-7](#)
- [Timeout Risk, page 17-7](#)
- [You Can Configure the Timeout on Centrally Managed DMPs, page 17-7](#)
- [You Can Configure the Timeout on One DMP in Isolation, page 17-8](#)
- [You Can Disable the Timeout on Centrally Managed DMPs, page 17-9](#)
- [You Can Disable the Timeout on One DMP in Isolation, page 17-10](#)

Timeout Benefit

When the webserver takes more than the configured interval to respond **OR** when its response is negative, your DMP enters a *content substitution* ("failover") state. In this state, your DMP substitutes available assets for unavailable ones. So, instead of showing a black screen, this behavior causes an affected digital sign to play alternative content that you chose previously. The underlying logic for this behavior anticipates a serious problem and overcomes it gracefully.

Timeout Risk

However, this logic cannot account for all possible scenarios. When a webserver would otherwise verify that an asset's address is valid, your DMP misinterprets the delay and enters its content failover state unnecessarily.

You Can Configure the Timeout on Centrally Managed DMPs

You can use DMM to edit this timeout.

1. Click **Network and Endpoints**.

2. Choose **Digital Media Players > Advanced Tasks > System Tasks**.

3. Click **Add New Application**.

4. Create a “Set” system task with this command string:

```
failover.timeout=<interval>&mib.save=1
```

 The screenshot shows a 'Create New System Task' form. It has four input fields: 'Name', 'Description', 'Request Type', and 'Request'. The 'Request Type' dropdown menu is set to 'Set'. At the bottom of the form, there are two buttons: 'Submit' and 'Cancel'.

where *<interval>* is the desired interval in milliseconds.

5. Deploy the system task to DMPs, as needed.

You Can Configure the Timeout on One DMP in Isolation

Alternatively, you can use either of these methods to edit the timeout on one DMP at a time.

- Point your desktop browser to `https://admin:<password>@<DMP_FQDN>:7777/set_param?failover.timeout=<interval>&mib.save=1`, where:
 - <password>* is whichever password you set most recently for this DMP’s *admin* user.
 - <DMP_FQDN>* is the DNS-resolvable hostname for exactly this DMP.
 - <interval>* is the desired interval in milliseconds.

OR

- Use DMPDM to point TVzilla (the browser on your DMP) to `https://admin:<password>@localhost:7777/set_param?failover.timeout=<interval>&mib.save=1`, where:
 - <password>* is whichever password you set most recently for this DMP’s *admin* user.
 - <interval>* is the desired interval in milliseconds.

You Can Disable the Timeout on Centrally Managed DMPs

You can use DMM to disable this timeout (CSCua03897).

1. Click **Network and Endpoints**.

2. Choose **Digital Media Players > Advanced Tasks > System Tasks**.
3. Click **Add New Application**.

4. Create a “Set” system task with this command string:
`video.force_wget_use=0&mib.save=1`

Create New System Task

Name

Description

Request Type

Request

5. Deploy the system task to DMPs, as needed.

Note To reenble the timeout, use this command string: `video.force_wget_use=1&mib.save=1`.

You Can Disable the Timeout on One DMP in Isolation

Alternatively, you can use either of these methods to disable the timeout on one DMP at a time.

- Point your desktop browser to `https://admin:<password>@<DMP_FQDN>:7777/set_param?video.force_wget_use=0&mib.save=1`, where:
 - `<DMP_FQDN>` is the DNS-resolvable hostname for exactly this DMP.
 - `<password>` is whichever password you set most recently for this DMP's *admin* user.

OR

- Use DMPDM to point TVzilla (the browser on your DMP) to `https://admin:<password>@localhost:7777/set_param?video.force_wget_use=0&mib.save=1`, where `<password>` is whichever password you set most recently for this DMP's *admin* user.

Note To reenable the timeout on one DMP in isolation, change the `set_param` command string to: `video.force_wget_use=1&mib.save=1`.

Procedures

- [Work with Assets and Categories in Your Media Library, page 17-10](#)
- [Add One Asset at a Time to Your Media Library, page 17-11](#)
- [Add Multiple Assets Simultaneously to Your Media Library, page 17-12](#)

Work with Assets and Categories in Your Media Library

Procedure

Step 1 Click **Content Management**.

Step 2 Click **Media Library**.

A tree on the left side of the Media Library page names the types of media that are supported and shows the hierarchy of categories that you have created to organize assets without regard for their media type.

Step 3 Click the name of a media type or of a category.

An untitled table on the right side of the page is updated automatically to describe assets of the relevant type that your library contains.

- Step 4** Enter the values and choose the options that meet your requirements.
- Step 5** Stop. You have completed this procedure.

Related Topics

- [Elements to Manage Assets and Categories, page 17-14](#)

Add One Asset at a Time to Your Media Library

Note

- **After you start to import an asset, do not click any browser button or navigate away from this page until the import is finished.** When you do, the import will not finish successfully.
- **We recommend that you do not use your DMM appliance as if it is a storage server.** It has limited capacity to store files and DMM might not function as designed when space runs low.

Procedure

- Step 1** Click **Content Management**.

- Step 2** Click **Media Library**.
- Step 3** Click **Add Media Asset**.
- The Add Asset dialog box opens.
- Step 4** Click the **Single** tab.
- Step 5** Do one of the following in the Source area to specify the full local pathname or remote HTTP URL of the asset.

- Click **URL**, enter the URL, and then check or uncheck the **Download URL** check box to control whether you download a local copy of the asset or use the version of it that is stored remotely.

Note

The URL must be encoded properly (using “%20” instead of spaces, for example), according to the principles set forth in RFC 2396.

- Click **Local File**, and then click **Browse** or enter the full local pathname.
- Step 6** Choose the option in the Asset Type area that best describes the asset.
- Step 7** Enter a title for the asset.
- Step 8** Enter the estimated duration for playback.

**Caution**

Before a DMP 4305G or 4400G will render any video asset for playback, make sure that the video duration is at least 3 seconds. Otherwise, the extreme brevity triggers DMP failover, which unloads the current playlist or presentation and causes your DMP to render its failover URL instead.

- To avoid this behavior altogether, use only video clips whose full duration is 3 seconds or more.
- To prevent this behavior temporarily when extremely brief video is somehow essential, disable video failover.
- To recover from this behavior, restart the application.

A DMP 4310G does not exhibit this behavior.

**Note**

The user interface in Cisco Digital Signs sometimes shows a mistaken estimate of 0 (zero) seconds as the full duration of a video playlist. Even though the estimate is wrong, the error does not have any practical consequences. Playback starts and stops as scheduled, without disruption.

This occurs after you set any video asset in the playlist to use 0 seconds as its planned duration. A video asset whose planned duration is 0 (zero) seconds will play from beginning to end.

When you want to skip a video instead of playing it, you must remove it from the playlist. Any playlist's constituent nonvideo assets must have a planned duration of at least 1 second.

Step 9 Choose at least one category.

Step 10 (Optional) Enter a description.

Step 11 (Optional) Enter an owner for the asset.

Step 12 Click **Save**.

OR

Click **Cancel**.

Step 13 Stop. You have completed this procedure.

Add Multiple Assets Simultaneously to Your Media Library

The amount of time that a batch download operation requires depends on the speed of your connection, the number of directory levels that you search for downloadable files, and the total combined file size of all files that you transfer.

**Note**

- **After you start to import an asset, do not click any browser button or navigate away from this page until the import is finished.** When you do, the import will not finish successfully.
- **We recommend that you do not use your DMM appliance as if it is a storage server.** It has limited capacity to store files and DMM might not function as designed when space runs low.

Before You Begin

- Use the DMS-Admin dashboard to check available space. For details, see [File Size and Storage Restrictions, page 17-5](#).

Procedure

Step 1 Click **Content Management**.

Step 2 Click **Media Library**.

Step 3 Click **Add Media Asset**.

The Add Asset dialog box opens.

Step 4 Click the **Batch** tab.

Step 5 Enter, in the Base URL area, the root-level URL for the batch download operation.

We do not support any use of spaces in URLs.

Step 6 Enter, in the Pattern area, a filename pattern that identifies which files to download.

For example, to download every file that uses the three-letter MPG filename extension, the pattern is ***.MPG**.

Note Do not enter the filename pattern to use any unsupported file type.

Step 7 Make choices and enter values to add assets to your library.

Step 8 Click **Save**.

OR

Click **Cancel** to discard your work.

Step 9 Stop. You have completed this procedure.

Table 17-3 Elements for Adding and Editing Assets

Element	Description
Single tab	
<i>Elements to add or edit one asset.</i>	
Source	The full local pathname or remote HTTP URL of the asset. We do not support any use of spaces in filenames or URLs.
File Type	Choose the type that best describes the asset: <ul style="list-style-type: none"> • Video—A video file in MPEG-1, MPEG-2, or MPEG-4 format. • Shockwave Flash—An Adobe Shockwave Flash 6, or 7 file if your DMP is a 4300G or a 4305G. Alternatively, if your DMP is a 4400G, and then a file in the format of Shockwave Flash 6, 7, 8, 9, or 10. • Images—A standard image file, such as a nonprogressive JPEG image. The filename extension must be JPG, JPEG, GIF, or PNG. • HTML—A web page. The filename extension must be HTM or HTML. • Firmware—A firmware or kernel image for the DMP. The filename extension must be FWIMG or BIN for firmware, or TIVELLA for kernels. • UDP—The routable IP address and UDP port for a streaming server.
Title	A unique and human-readable name for the asset.
Estimated Duration	The estimated duration for playback, counted in hours, minutes, and seconds.
Category	Describes each of the categories that should contain this asset. To add a category to the list, click Select Category .
Description	Optional, brief description of the asset.
Owner	Your name or the name of the person who added the asset.
Batch tab	
<i>Elements to add or edit multiple assets simultaneously.</i>	
Base URL	An HTTP URL that points to a directory on a server. The directory that you point to serves as the root-level URL for the batch download operation; every file that you download is retrieved from this directory or from one of its children at a lower level. We do not support any use of spaces in URLs.
Pattern	The filename pattern that identifies which files to download. We do not support any use of spaces in filenames.

Table 17-3 Elements for Adding and Editing Assets (continued)

Element	Description
File Type	Choose the type that best describes these assets: <ul style="list-style-type: none"> • Video¹—A video file in MPEG-1, MPEG-2, or MPEG-4 format. • Shockwave Flash²—Any Adobe Shockwave Flash 6, or 7 file if your DMP is a 4300G or a 4305G. Alternatively, if your DMP is a 4400G, any Adobe Shockwave Flash 6, 7, 8, 9, or 10 file. • Images—Any standard image file, such as a nonprogressive JPEG image. The filename extension must be JPG, JPEG, GIF, or PNG. • HTML—Any web page. The filename extension must be HTM or HTML. • Firmware—Any firmware image for the DMP. The filename extension must be FWIMG or BIN for firmware, or TIVELLA for kernels. • UDP—The routable IP address and UDP port for a streaming server.
Levels	The number of levels below the specified base URL to search for (and download) files with filenames that match the specified pattern.
Category	Click the name of the one category that should contain these assets.

1. See the “MPEG-4 Support and Restrictions” section on page 17-4.

2. See the “Shockwave Flash (SWF) Support and Restrictions” section on page 17-4.

Elements To Describe and Preview One Asset

The View Asset dialog box describes the attributes of one asset in your Media Library and, in some cases, shows a preview. Attribute information is sorted under two tabs, *Overview* and *Usage*. Click a tab to see the asset attributes that it describes. To close the View Asset dialog box, click **Close**.

Navigation Path

Content Management > Media Library > Options > View Media Asset

Table 17-4 Elements for Viewing Asset Attributes

Element	Description
Overview tab	
<i>Attributes that are derived from information in your media library include the elements with these field labels: Title, Description, File Type, Estimated Duration, Owner, Category Names, and Source. To understand these elements, see Elements to Add Assets and Edit Their Attributes, page 17-17. Other elements on the Overview tab are as follows.</i>	
Preview	Either a generic icon that represents the asset type or a thumbnail that you can click to view this asset, assuming that its file type is viewable in your browser.
Path	The full HTTP pathname for this asset.
Size	The file size.
Playlist Count	The total count of playlists that contain and are dependent upon this asset. To learn more about these playlists, click the Usage tab.
Presentation Count	The total count of presentations that contain and are dependent upon this asset. To learn more about these presentations, click the Usage tab.
Date Modified	Time stamp (in the format DD-MM-YYYY hh:mm:ss) that says when the file was last modified.

Table 17-4 Elements for Viewing Asset Attributes (continued)

Element	Description
Usage tab	
<i>Shows either the Playlists for Asset table or the Presentations for Asset table, depending on whether you click Playlist or Presentation, respectively. The table sorts information into the following columns.</i>	
Name	The name of the presentation or the playlist that is dependent upon this asset.
Time Referenced	The total count of instances when the described presentation or playlist includes this asset.
Date Modified	Time stamp (in the format <code>DD-MM-YYYY hh:mm:ss</code>) that says when the described presentation or playlist was last modified.

- [Reference, page 18-3](#)

We prepared this material with specific expectations of you.

- ✓ You will organize media assets for sequential playback on presentation systems that your DMPs control.
-

Concepts

- [Guidelines, page 18-1](#)
- [Restrictions, page 18-2](#)

Guidelines

- [Best Practices to Optimize DMP Settings for Playlists, page 18-1](#)

Best Practices to Optimize DMP Settings for Playlists

- [Improve Transition Speeds, page 18-2](#)
- [Reduce or Resolve Black-Screen Delays After Video Playback, page 18-2](#)

Improve Transition Speeds

If playback transitions are unacceptably slow between videos, you can disable the video failover feature on DMPs.

Reduce or Resolve Black-Screen Delays After Video Playback

We recommend that you enable syslog on DMPs long enough to configure its settings, even if you have no plans to use it. **When you will not use syslog:**

1. Set the syslog server address to 127.0.0.1.
2. Save your changes.
3. Disable syslog.
4. Save your changes.
5. Restart the DMP.

Restrictions

You cannot add an advanced task (or a system task) to a playlist. However, you can schedule them to occur between playlists.

Procedures

- [Create and Organize Playlists, page 18-2](#)
- [Change the Sequence of Playback, page 18-3](#)

Create and Organize Playlists

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Choose **Media Library > Playlists**.

Step 3 Select the options and enter the values that meet your requirements.

When you choose options anywhere on the Playlists page, it is updated automatically to show the options and features that are relevant to your selection.

Step 4 Stop. You have completed this procedure.

Related Topics

Table 18-1 Elements to Define a Playlist

Element	Description
Title	The title for this playlist.
Assets	
<i>A table in which each row describes one asset. Attributes are sorted into these columns.¹</i>	
Title	A unique and human-readable name for the asset.

Table 18-1 Elements to Define a Playlist (continued)

Element	Description
File Type	The type that best describes the asset. <ul style="list-style-type: none"> • Video • Shockwave Flash • Images • HTML • Firmware
{Estimated Planned}	Respectively: <ul style="list-style-type: none"> • An estimate of the actual running time from start to finish of the described asset, without regard for the amount of time the playlist has reserved to show it. • The amount of time that is reserved in the playlist to show this asset. <p>A planned duration of 0 (zero) seconds in the playlist causes a video to play from beginning to end. To skip a video instead of playing it, you must remove it from the playlist. Nonvideo assets must have a duration of 1 second or more for each that you include in a playlist.</p>
Size	The file size.
Delete	
Resolution	Choose the resolution of your DMP display from the Select list or enter its width and height, in pixels.
Options	
Randomize	Enables or disables a randomized sequence of playback for assets in this playlist. To turn randomization on, check the check box. To turn randomization off, uncheck the check box.
Description	A description of this playlist. The description is optional.
Playlist Owner	Your name or the name of the person who manages this playlist.

1. To choose more assets from your media library that this playlist should include, click **Add Assets**.

Content Distribution and Delivery

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 19-1](#)
- [Procedures, page 19-16](#)
- [Reference, page 19-26](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will configure and manage how your digital signage network uses content distribution technologies.
-

Concepts

- [Overview, page 19-1](#)
- [Understand DMP Support for the CIFS Protocol, page 19-2](#)
- [Choose a Content Delivery System to Use with DMPs, page 19-2](#)
- [DMS-CD Concepts, page 19-4](#)
- [Guidelines, page 19-8](#)
- [Restrictions, page 19-12](#)
- [Example Scenario, page 19-14](#)

Overview

Commonly, the bandwidth capacity required to deliver an HD video stream ranges from 10 Mbps to 15 Mbps. In contrast, an average SD video stream uses approximately one-third as much capacity. However, these parameters are highly configurable and will vary from one WAN to another.

Content distribution technologies can make perfect copies of important files from your origin server and store the duplicates on multiple nodes in your network. Later, anyone who needs one or more of these cached files can obtain them quickly from a node that is closer to them than the origin server and less heavily loaded. Such methods improve network scalability and user experience.

Topics in this chapter explain how to use content distribution technologies with Cisco Digital Signs. Your understanding these important concepts will help you to use content distribution successfully.

Understand DMP Support for the CIFS Protocol

Common Internet File System (CIFS) is a network protocol for sharing files and for obtaining remote access to those files.

A *CIFS share* is a mount point on a network attached storage device that supports the CIFS protocol. When you choose WAAS as your content distribution method, Cisco Digital Signs instructs DMPs to use the CIFS protocol and mount a network share, such as a Windows shared folder, that uses CIFS.

Related Topics

- [Configure DMM to Use ACNS, WAAS, or ECDS, page 19-17](#)
- [Procedures, page 19-16](#)

Choose a Content Delivery System to Use with DMPs

In media networks, it is sometimes necessary to distribute large files where bandwidth capacity is moderately or severely constrained. The challenge of doing this successfully is that delivering HD or SD video streams and deploying large assets often requires an average data transfer rate of greater than 6 million bits per second (Mbps, or megabits). Media networks can compound your need for bandwidth.

There is a practical maximum limit in any WAN for how much bandwidth each of its remote sites can use, and a content delivery solution can help you to manage multicast file distribution efficiently to the DMPs that operate at your remote sites. In this way, content delivery solutions can enhance the scalability of your existing network infrastructure and adapt it for media deployments.

ACNS, WAAS, and ECDS

ACNS and ECDS are designed for efficient delivery of video and other media assets. Both ACNS and ECDS rely on edge servers to apply their optimizations. Although that edge server is called a *CE* in ACNS, the equivalent in ECDS is called an *SE*. While ACNS can act as an HTTP/HTTPS proxy and can leverage WCCP for direct or dynamic proxy, ECDS uses DNS to redirect its clients to an appropriate service engine.

WAAS provide benefits with a much larger variety of content and protocols, including HTTP, HTTPS, CIFS, NFS, MAPI (Exchange), VDI, live video and even legacy protocols (via TFO, LZ and DRE). However, WAAS has fewer features than ACNS or ECDS, leaving it less flexible in terms of video. WAAS requires that accelerators be installed at both the client side and the server side. With WAAS, traffic optimization is completely transparent at both ends.

While ACNS and ECDS help with traffic-to-client traffic exclusively, WAAS optimizes traffic in both directions and even among multiple branch offices.

Table 19-1 Comparison of Supported Content-Distribution Methods

Method	Use Cases
DMS-CD	<p>Consider DMS-CD when:</p> <ul style="list-style-type: none"> Your DMPs <i>do not</i> show live video or high-definition video. Each site in your WAN contains a maximum of three DMPs. Your whole network contains a maximum of 200 DMPs. Each site in your WAN has bandwidth capacity of less than T1/E1. On average, each site in your organization downloads less than 200 MB daily. It takes longer than 5 hours in your WAN to download 300 MB at 128 Kbps. <p>Note The file transfer capacity of DMS-CD at any one time is limited to 10 GB (CSCsx45983).</p>
ECDS	<p>Consider ECDS when:</p> <ul style="list-style-type: none"> Your DMPs show high-definition video. Each site in your WAN has a minimum of three DMPs. Each site in your WAN has less bandwidth capacity than T2/E2. On average, each site in your organization downloads 200-300 MB of video daily. You need a comprehensive platform for media-delivery, including a Flash streaming server.
ACNS	<p>Consider ACNS when:</p> <ul style="list-style-type: none"> Your DMPs show high-definition video. Each site in your WAN has a minimum of three DMPs. Each site in your WAN has less bandwidth capacity than T2/E2. On average, each site in your organization downloads 200-300 MB of video daily. You need a comprehensive platform for media-delivery, excepting a Flash streaming server.
WAAS	<p>Consider WAAS when:</p> <ul style="list-style-type: none"> Each site in your WAN has a minimum of three DMPs. Each site in your WAN has less bandwidth capacity than T2/E2. On average, each site in your organization downloads more than 300 Mbps of video daily. You want to use the CIFS protocol when provisioning assets to your DMPs.

- [Concurrent Deployments, page 19-4](#)
- [DMS-CD Performance Factors, page 19-5](#)
- [Understand Shared Scheduling Features for Deployments, page 19-6](#)

DMS-CD Overview

Activation

Anyone who has purchased a valid license to use this release of Cisco Digital Signs also has a perpetual license to use its built-in implementation of DMS-CD. No additional software is required and there is no recurring cost.

Cisco DMS Content Distribution (DMS-CD) is a file delivery and management mechanism. It conserves network bandwidth and optimizes playback performance by provisioning creative assets directly to your DMPs. You can use FTP or SFTP to transfer multiple playlists and presentations to DMP local storage.

- Store assets locally on the flash memory card that is preinstalled inside a DMP.
- Store assets locally on an external USB hard drive or flash drive that you attach to a DMP.

Tip

DMPs cannot use the loopback IP address (127.0.0.1) or the loopback hostname (localhost) to find or load assets stored locally. Instead, the path to local assets must always begin with **file://tmp/ftproot/** before it specifies one local volume, any subdirectories, and the relevant filename.

Retry Timeout

- The factory default Retry Count value is 5.
- The factory default Retry Timeout duration is 300 seconds.

Given these values, you can expect that DMS-CD—when it uses default values—takes as long as 1,500 seconds (25 minutes) to detect assets or determine that a DMP is unreachable and give up. In cases when this duration is too long, you might try changing the Retry Timeout value from 300 to 30.

Concurrent Deployments

Most DMS-CD deployment preference settings that you define take effect during the next scheduled DMS-CD deployment. However, any time that you change the “Number of concurrent deployments” value, you must restart your DMM appliance and run a scheduled DMS-CD deployment before the changed setting takes effect on your DMPs.

DMS-CD Performance Factors

- [Differential Download Intelligence, page 19-5](#)
- [Bandwidth Consumption, page 19-5](#)
- [Resumption of Interrupted and Paused File Transfers, page 19-5](#)

Differential Download Intelligence

Differential download intelligence in DMS-CD prevents the needless provisioning of any asset more than once to any DMP that uses it and already has downloaded it, even if you have used the asset repeatedly in multiple playlists or presentations. Your DMPs retain their valid assets and download only what is new or has changed.

Bandwidth Consumption

A systemwide threshold that you define limits in your WAN how much bandwidth is used per session when DMS-CD provisions assets to one of your DMPs.

For example, a limit of 1.2 mbits means that file transfer speeds for DMS-CD deployments cannot exceed the maximum threshold of 1.2 mbits per DMP.

Thus, if your deployment provisions assets to 20 DMPs, the maximum WAN bandwidth that DMS-CD uses is 24 mbits, because $20 \times 1.2 = 24$.

Resumption of Interrupted and Paused File Transfers

File transfer resumption in DMS-CD helps to compensate for bandwidth throttling and other constraints that might limit how many assets you can provision at a time. Such constraints commonly include a limited number of nighttime hours when deployments are certain not to disrupt the digital signage messages or *Cisco Cast* programs that your organization shows to its targeted audiences.

Values that you define at Deployment Manager > Deployment Preferences determine in part how DMS-CD responds to any incomplete file transfers, but its response also considers the size of individual files within a deployment package. Finally, a DMP might generate a queue for itself if it is the target of multiple deployments, because a DMP can receive data from only one deployment package at a time.

Outages and Other Disruptions

When the scheduled delivery of a deployment package is interrupted—by a power failure or a network outage, for example—while you are provisioning assets, the file transfer process might resume automatically at a later time.

- When sufficient time remains during the same deployment window that was interrupted, your file transfer resumes after your retry interval has elapsed.

Tip You set this interval in the “Deployment retry time (in seconds)” field.

- When the interruption extends past the end of the scheduled deployment window and the deployment is scheduled to recur, file transfer resumes automatically the next time that the deployment is scheduled to run.
- When the interruption extends past the end of the scheduled deployment window but you did not schedule the deployment to recur, file transfer stops without success and does not recur.

Likewise, the maximum number of times that DMS-CD tries to provision assets for an interrupted deployment package is constrained by the “Deployment retry count” value.

File Size

When your deployment is scheduled to recur, DMS-CD will either pause or stop the transfer of assets whose transfer did not finish during the deployment window. DMS-CD uses file size to determine whether an incomplete file is paused or stopped:

- **Transfer is stopped** for any partially transferred file whose size is *less than* 6 MB, no matter how much of it was transferred. Transfer of a 100 KB file, for example, must start over again from the first byte when the deployment recurs.
- **Transfer is paused** for any partially transferred file whose size is *greater than* 6 MB, no matter how little of it was transferred. A file whose size is 1.6 GB, for example, is paused when none of your DMPs can download more than 200 MB per day.

Tip

- **Calculations of this kind can help you to estimate how far in advance you should schedule the first instance of a recurring deployment.** When you know already, for example, that one-fifth of the data within a deployment package can transfer to DMP local storage during the deployment window that you reserved, then you know also that the deployment must recur on at least 5 separate days or your DMPs will not receive their assets in time.
- We recommend that your deployments recur once each day.
- When a deployment is scheduled to recur at any other interval than once per day—such as once per week—then this is the interval after which any paused transfer will resume.

DMP Group Memberships

Each DMP considers its group memberships when it starts to receive provisioned data from DMS-CD.

- DMPs that are assigned to only one DMP group apiece accept provisioned data to the best of their capacity.
- DMPs that belong to multiple groups, which are scheduled to receive differing deployments simultaneously, can receive only one of these deployments at a time. When they are the target of simultaneous deployments, DMPs generate a queue for themselves and receive the various deployment packages one at a time. Depending on the size and relative importance of one package over another, such DMPs might sometimes lack assets that you planned for them to have.

Tip

You might notice after a DMP joins multiple groups that it runs out of local storage space (on usb_1 or usb_2) faster than it did before.

- You can use the Play Now feature to deploy an empty playlist to any DMPs whose local storage has kept copies of obsoleted assets. This method clears local storage quickly.
- Alternatively, when local storage contains a combination of assets—some needed, others not—you can create and deploy a playlist that includes only the useful assets. The DMPs that receive this deployment will keep what they need and delete everything else.

Understand Shared Scheduling Features for Deployments

Because DMS-CD uses the same scheduling features that are built into Cisco Digital Signs, you can schedule assets to be provisioned late at night or at other convenient, planned times. Furthermore, reporting features in Cisco Digital Signs show you which DMS-CD deployments have succeeded or failed and show you which files were deployed to each DMP.

Understand DMS-CD Alert Reports

- [Monitoring Modes, page 19-7](#)
- [Error Conditions, page 19-7](#)
- [Alert Types, page 19-7](#)

Monitoring Modes

The Alert Reports feature supports modes that you can use when checking for DMS-CD deployment errors.

- *Live monitor mode* describes the most recent 100 instances of an event type that you choose. Its data is refreshed automatically every 90 seconds.
- *Snapshot mode* describes only the events that match the combination of all parameters that you choose.

Error Conditions

DMS-CD logging captures, detects, and reports these error conditions.

- DMS-CD cannot retrieve a file.
- DMS-CD cannot provision a file (DMP out of space or missing USB)
- DMP is not reachable (is down, or has wrong IP)
- Deployment was interrupted (network outage, DMM down, etc.)
- Deployment was not completed during its window

Alert Types

Successes or failures, exclusively

These options from the Type list cause a filtered report to describe only the DMS-CD deployments that failed or succeeded.

- Deployment Failures
- Deployment Successes

DMP-specific

These options from the Type list cause the filtered report to describe only the events that DMPs reported. Therefore, some of them might pertain to disrupted or failed deployments with DMS-CD.

- DMP Outages
- DMP Restarts
- DMP IP Conflicts

Internal to DMS-CD

When you choose the All Internal Events option from the Type list, these event types also pertain to DMS-CD deployments.

- Deployment error
- Deployment started
- Deployment ended

Guidelines

**Note**

You must restart your DMP after you switch it from ACNS mode to ECDS mode. Although we recommend generally that you restart your DMP after you switch its mode from any content distribution method to another, it is mandatory only when you switch from ACNS to ECDS. (CSCto35473)

- [DMS-CD Guidelines, page 19-8](#)

DMS-CD Guidelines

- [Gather the Essential Data to Develop a Deployment Strategy, page 19-8](#)
- [Limit DMS-CD Disruptions to DMP Performance, page 19-10](#)

Gather the Essential Data to Develop a Deployment Strategy

DMS-CD deployments and deployment packages are all unique in their own ways. However, a repeatable process supports your development of the strategy for any such deployment. After you gather and record the numeric values that describe key factors, simple arithmetic leads you to a deployment strategy that we expect should be effective in your network.

The worksheet in this section explains and records these numeric values and guides you through the simple equations to plan a successful deployment.

**Note**

This worksheet assumes that all targeted DMPs in a deployment have identical network bandwidth capacity available to them.

Table 19-2 Pre-Planning Worksheet for One DMS-CD Deployment

Factor	Definition and Supporting Data
<p>A. DMP incoming transfer rate</p>	<p>Either the maximum transfer rate that you defined for DMS-CD or the result of factors that further constrain this rate.</p> <ul style="list-style-type: none"> (A1) What value is in effect for the Maximum Transfer Rate (Table 19-5 on page 19-27)? <input data-bbox="435 474 1318 541" type="text"/> (A2) If any factors¹ reduce bandwidth capacity per DMP to a lower rate than A1, what is the actual rate? <input data-bbox="435 604 1318 672" type="text"/> <p>Q. The lower of these values is exactly what? <input data-bbox="435 730 1318 798" type="text"/></p>
<p>B. Total data to be deployed</p>	<p>The product of two values that you multiply.</p> <ul style="list-style-type: none"> (B1) In this deployment, the package size per DMP is exactly what? <input data-bbox="435 877 1318 945" type="text"/> (B2) This deployment targets exactly how many DMPs that should receive its package? <input data-bbox="435 1008 1318 1075" type="text"/> <p>Q. What is the product (in gigabytes) when you multiply B1 by B2? <input data-bbox="435 1134 1318 1201" type="text"/></p>
<p>C. Maximum concurrent deployments</p>	<p>Q. What value is in effect for the Number of concurrent deployments preference setting? <input data-bbox="435 1243 1318 1310" type="text"/></p>
<p>D. Duration of opportunity for deployment</p>	<p>The product of two values that you multiply.</p> <ul style="list-style-type: none"> (D1) How many hours per day are available for <i>nondisruptive</i> deployments? <input data-bbox="435 1415 1318 1482" type="text"/> (D2) How many days remain until all assets in the deployment package must be provisioned and available for playback on all targeted DMPs? <input data-bbox="435 1545 1318 1612" type="text"/> <p>Q. What is the product (counted in hours) when you multiply D1 by D2? <input data-bbox="435 1671 1318 1738" type="text"/></p>

Table 19-2 Pre-Planning Worksheet for One DMS-CD Deployment (continued)

Factor	Definition and Supporting Data
E. Total DMS-CD throughput	<p>Gather these values.</p> <ul style="list-style-type: none"> • (E1) What is the throughput of your DMM appliance?² <input type="text"/> • (E2) What value is in effect for the Concurrency preference setting? <input type="text"/> • (E3) What DMP Incoming Transfer Rate value did you record in row A? <input type="text"/> • (E4) What is the sum when you add E2 to E3? <input type="text"/> <p>Q. Compare the values of E1 and E4. The lower value is exactly what? <input type="text"/></p>
F. Shortest possible duration for a parallel deployment	<p>The quotient when you divide one value by another.</p> <ul style="list-style-type: none"> • (F1) What Total Data to Be Deployed value did you record in row B? <input type="text"/> • (F2) What Total DMS-CD Throughput value did you record in row E? <input type="text"/> <p>Q. What is the quotient (counted in hours) when you divide F1 by F2? <input type="text"/></p>

1. Potentially including any QoS policies that limit how much of your total bandwidth capacity DMS-CD is permitted to use.
2. Because your DMM appliance uses a 1 GB network adapter for Ethernet, its throughput is likely to be at least 40 mbits in any modern network that is not overloaded. If you do not know how to measure server throughput, contact your network administrator.

Limit DMS-CD Disruptions to DMP Performance

Improper scheduling practices and improper WAN bandwidth parameters in your media network might cause DMS-CD to disrupt playback performance temporarily on DMPs. The disruption affects multicast video streams, HD videos, Shockwave Flash animations, and image assets that these DMPs show on their attached presentation systems while simultaneously downloading newly provisioned, large assets. When this disruption occurs:

- Videos might become fragmented (contain artifacts), drop frames, or cut out during playback.
- SWF animations might play slowly.
- Images might redraw slowly.
- DMPs might restart unexpectedly, in rare instances.

You can configure bandwidth restrictions in your WAN that should help to alleviate these symptoms or eliminate them completely, depending on the system load of each DMP.

Best Practices

We recommend that you apply these DMS-CD best practices in your network whenever possible.

- Create and maintain only one deployment package for any DMP group whose constituent DMPs should play assets from local storage. Simply configure its deployment to recur nightly (or whatever other time has the least possible impact on your audience). Then, modify it as necessary, to:
 - Include all new or changed assets that member DMPs should obtain or keep for playback.
 - Remove obsolete assets that member DMPs should autoclean from local storage.

DMS-CD syncs DMP storage with the current version of the deployment package and applies all changes automatically.

Note This method is simpler and more scalable than developing and maintaining a new package and scheduling a new deployment each time that your needs change. Also, it increases the likelihood that large deployments will resume and be completed successfully on a slow connection. Furthermore, it prevents deployments from becoming too numerous to manage.

- Even if you have not imposed any bandwidth restrictions upon DMS-CD, avoid scheduling deployments and playback to run in parallel on DMPs. Otherwise, deployments can take longer to finish than you anticipate. (This delay occurs because the load is doubled on DMPs.) For best results, schedule DMS-CD deployments to run when no playback is scheduled. During such times, there is little or no load on DMPs.
- When playback and deployments must overlap, configure an upper threshold for DMS-CD bandwidth consumption. The value that you enter should be less than your network's maximum transfer rate. Adjust and test values as necessary, until you determine exactly how much bandwidth DMS-CD can use in your WAN without affecting DMP performance.

Tip Use the "Enable maximum transfer rate" field (at Digital Media Players > Deployment Manager > Deployment Preferences) to limit DMS-CD bandwidth consumption.

Note In our tests, we found that using 5 Mbps as the upper threshold provided adequate bandwidth restriction in most cases. However, this is not necessarily a value that you should use. Results will vary depending on network capacity and the load placed on a DMP.

Related Topics

- [Configure Deployment Threshold Preferences for DMS-CD, page 19-19](#)

Restrictions

- [DMS-CD Restrictions, page 19-12](#)
- [CIFS Restrictions, page 19-13](#)
- [ACNS Restrictions, page 19-13](#)
- [ECDS Restrictions, page 19-13](#)

DMS-CD Restrictions

DMS-CD Capacity Category	Maximum Threshold
WAN size	100 sites
DMP count, per site	3 DMPs ¹
Data transfer per day, per DMP	300 MB ²
Concurrent sessions per DMM appliance	75 DMS-CD sessions ^{2,3}

1. This value is approximate and variable from one network to another.
2. This threshold might be lower in your WAN, depending on its total bandwidth capacity.
3. This threshold might be lower in your WAN, depending on your “Enable maximum transfer rate” value.

- We do not support use of the “Cast” plugin for Digital Media Designer with any content distribution system or network. (**CSCto35473**)
- Even though Microsoft Internet Information Server (IIS) is not case-sensitive, any use of IIS can trigger case-sensitive behaviors in DMS-CD. This occurs because DMS-CD uses all lowercase letters during its creation of a local folder whose name matches the FQDN of the external IIS host. When any asset URL includes even one uppercase letter in reference to the IIS host FQDN, DMS-CD cannot find any local folder by that name and, so, cannot find its local copy of assets to render. The error message in this case is “Size = Not Available is not available with the File Access Service. The status is FAILED.” (**CSCtn07580**)
- This DMS-CD release does not support live video. It provisions assets that already exist.
- This DMS-CD release provisions assets to DMPs exclusively. You cannot target any other device type.
- This DMS-CD release does not delete files from any DMP that belongs to multiple DMP groups. For autocleaning to occur on a DMP, it can belong to one DMP group only. Alternatively, you can use Play Now to deploy a job to DMPs.
- You can attach only one external USB flash drive or external USB hard drive to a DMP.
- We do not support USB hubs or any other method that you might use to attach multiple drives (or other device types) to a DMP.
- DMS-CD does not prevent you from using the Actions list or the Play Now feature to start transferring a DMS-CD deployment package immediately. However, using either of these methods defeats many of the most important benefits of using DMS-CD. We recommend instead that you use the Play in Future feature to schedule all of your DMS-CD deployment packages.
- You cannot use the Deployment Status feature (at Digital Media Players > Deployment Manager > Deployment Status) to check the progress or status of immediate deployments.

CIFS Restrictions

CIFS Usernames

- Neither a DMP 4310G nor a DMP 4400G can mount any WAAS share volume whose CIFS username contains even one of these forbidden characters (**CSCtx15486**).

% & ' ' ()

CIFS Passwords

- Neither a DMP 4310G nor a DMP 4400G can mount any WAAS share volume whose CIFS password contains even one of these forbidden characters (**CSCtx15486**).

% +

Use of CIFS in General

- There can be only one CIFS mount point, which all DMPs use in common. You cannot set DMPs or DMP groups to mount any WAAS share except this one.
- Either your DMPs *all* use CIFS, or *none* of them do.

Digital Media Designer (DMD)

- We do not support use of the “Cast” plugin for Digital Media Designer with any content distribution system or network. (**CSCto35473**)

HD Video Playback

- Playback is choppy for HD video that a DMP 4310G renders from a mounted CIFS volume. However, a DMP 4400G can render the identical file without difficulty. (**CSCtj00686**)

ACNS Restrictions

- We do not support use of the “Cast” plugin for Digital Media Designer with any content distribution system or network. (**CSCto35473**)

Note

You must restart your DMP after you switch it from ACNS mode to ECDS mode. Although we recommend generally that you restart your DMP after you switch its mode from any content distribution method to another, it is mandatory only when you switch from ACNS to ECDS. (**CSCto35473**)

Caution

Never delete an ACNS channel that Cisco DMS uses. Otherwise, you cannot see, select, edit, or delete in your schedule any events that use the deleted channel. In this case, content substitution occurs on your DMPs because scheduled events call upon missing assets. So, before you delete any ACNS channel, be sure that you have deleted from your schedule all events that will be disrupted by its absence.

ECDS Restrictions

- We do not support use of the “Cast” plugin for Digital Media Designer with any content distribution system or network. (**CSCto35473**)
- Intra-playlist transitions take longer (by 1 or 2 seconds apiece) during playback in ECDS mode than they take in any other mode. Also, a gray screen is visible briefly between videos. (**CSCtl143456**)

**Note**

You must restart your DMP after you switch it from ACNS mode to ECDS mode. Although we recommend generally that you restart your DMP after you switch its mode from any content distribution method to another, it is mandatory only when you switch from ACNS to ECDS. (CSCto35473)

**Caution**

Never delete an ECDS channel that Cisco DMS uses. Otherwise, you cannot see, select, edit, or delete in your schedule any events that use the deleted channel. In this case, content substitution occurs on your DMPs because scheduled events call upon missing assets. So, before you delete any ECDS channel, be sure that you have deleted from your schedule all events that will be disrupted by its absence.

Example Scenario

Acme might be almost any kind of organization that uses digital signs. In this scenario, *Acme* uses digital signs at five of its sites. The scenario describes how *Acme* organizes its DMPs across these sites, and then optimizes its schedule and settings for efficient delivery of strategic assets to DMPs.

Because the standard floorplan at *Acme* allows for five signs per site, the *Acme* signage network combines 25 DMPs with 25 digital signs. As there are five weeknights per week and coincidentally, five DMP groups at *Acme*, its technical staff use a streamlined deployment strategy.

They create and save just five deployment packages in total—merely one per DMP group. They update the assets in each package according to a schedule for planned changes. They configure each package deployment to recur once per week, on a weeknight. Then, as needed, they can use the Play Now feature to deploy urgent or mission-critical changes in real time, if the standard timeslot is not appropriate.

- [Deployment Scheduling Logic at Acme, page 19-15](#)

Organizational Logic at Acme

Table 19-3 Organizational Logic for DMPs and Digital Signs at Acme

Item	Description at Acme
Locations	Acme calls its locations with digital signs Site A, Site B, Site C, Site D, and Site E.
DMP Groups	Acme sorts its 25 DMPs into five DMP groups. <ul style="list-style-type: none"> • The five DMPs in Group 1 receive their scheduled deployment every Monday. • The five DMPs in Group 2 receive their scheduled deployment every Tuesday. • The five DMPs in Group 3 receive their scheduled deployment every Wednesday. • The five DMPs in Group 4 receive their scheduled deployment every Thursday. • The five DMPs in Group 5 receive their scheduled deployment every Friday.

Table 19-3 Organizational Logic for DMPs and Digital Signs at Acme

Item	Description at Acme
DMPs	<p>There are five DMPs per site, and each DMP belongs to only one group. The names of DMPs are always derived from a combination of their site (a letter from A to E) and their group (a number from 1 to 5).</p> <ul style="list-style-type: none"> • DMPs at Site A use the names A1, A2, A3, A4, and A5. • DMPs at Site B use the names B1, B2, B3, B4, and B5. • DMPs at Site C use the names C1, C2, C3, C4, and C5. • DMPs at Site D use the names D1, D2, D3, D4, and D5. • DMPs at Site E use the names E1, E2, E3, E4, and E5.
Group Assignments	<p>Each DMP group includes one DMP apiece from each site.</p> <ul style="list-style-type: none"> • Group 1 includes A1, B1, C1, D1, and E1. • Group 2 includes A2, B2, C2, D2, and E2. • Group 3 includes A3, B3, C3, D3, and E3. • Group 4 includes A4, B4, C4, D4, and E4. • Group 5 includes A5, B5, C5, D5, and E5.

Deployment Scheduling Logic at Acme

Table 19-4 explains how Acme organizes its scheduled deployments.

Table 19-4 DMS-CD Deployment Details for Acme

DMP Group	Locations of Targeted DMPs	Package Name and Total Size	Maximum Bandwidth per DMP	Aggregate Bandwidth per DMP Group	Estimated Length of a Full Deployment ¹	
					In Seconds	In DD:HH:MM

Regularly scheduled deployment for **Group 1** recurs overnight each **Monday**, from 10:00 p.m. to 6:00 a.m.²

Group 1	Site A, DMP = A1	Package 1 = 300 MB	128 Kbit/sec	640 Kbit/sec	18750	00:05:12
	Site B, DMP = B1					
	Site C, DMP = C1					
	Site D, DMP = D1					
	Site E, DMP = E1					

Regularly scheduled deployment for **Group 2** recurs overnight each **Tuesday**, from 10:00 p.m. to 6:00 a.m.²

Group 2	Site A, DMP = A2	Package 2 = 300 MB	128 Kbit/sec	640 Kbit/sec	18750	00:05:12
	Site B, DMP = B2					
	Site C, DMP = C2					
	Site D, DMP = D2					
	Site E, DMP = E2					

Table 19-4 DMS-CD Deployment Details for Acme (continued)

Regularly scheduled deployment for Group 3 recurs overnight each Wednesday , from 10:00 p.m. to 6:00 a.m. ²						
Group 3	Site A, DMP = A3	Package 3 = 300 MB	128 Kbit/sec	640 Kbit/sec	18750	00:05:12
	Site B, DMP = B3					
	Site C, DMP = C3					
	Site D, DMP = D3					
	Site E, DMP = E3					
Regularly scheduled deployment for Group 4 recurs overnight each Thursday , from 10:00 p.m. to 6:00 a.m. ²						
Group 4	Site A, DMP = A4	Package 4 = 300 MB	128 Kbit/sec	640 Kbit/sec	18750	00:05:12
	Site B, DMP = B4					
	Site C, DMP = C4					
	Site D, DMP = D4					
	Site E, DMP = E4					
Regularly scheduled deployment for Group 5 recurs overnight each Friday , from 10:00 p.m. to 6:00 a.m. ²						
Group 5	Site A, DMP = A5	Package 5 = 300 MB	128 Kbit/sec	640 Kbit/sec	18750	00:05:12
	Site B, DMP = B5					
	Site C, DMP = C5					
	Site D, DMP = D5					
	Site E, DMP = E5					

1. In a full deployment, where the target DMPs have not stored any assets whatsoever that are part of the latest deployment package. In many cases, packages will combine new assets with ones that have already been deployed. When this occurs, less time is required because only the new assets, or the changed ones, are actually deployed.
2. Although a full deployment should take roughly 5 hours, Acme pads its schedule to compensate for any problems that might slow down its deployments.

Procedures

- [Configure DMM to Use ACNS, WAAS, or ECDS, page 19-17](#)
- [Configure DMS-CD, page 19-18](#)

Configure DMM to Use ACNS, WAAS, or ECDS

Before You Begin

- To see and use the Settings tab, you must be logged in as an administrator.

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Choose **Settings > Media Delivery**.

The screenshot shows a dialog box titled 'MEDIA DELIVERY OPTIONS'. It contains a question: 'Would you like to configure settings for WAAS, ACNS or ECDS at this time?'. There are four radio buttons: 'No' (selected), 'Yes. Please select from the options below.', 'WAAS', 'ACNS', and 'ECDS'. Below the radio buttons is a text input field. At the bottom are 'Save' and 'Cancel' buttons.

Step 3 Click **Yes**.

Step 4 Do one of the following.

- Click **WAAS**.

WAAS ACNS ECDS

User	<input type="text" value="superuser"/>
Password	<input type="password" value="*****"/>
Share	<input type="text"/>
Host Name/IP	<input type="text"/>

OR

- Click **ACNS**.

WAAS ACNS ECDS

CDM Address	<input type="text"/>
Port	<input type="text"/>
User	<input type="text" value="superuser"/>
Password	<input type="password" value="*****"/>
Default ACNS Channel	<input type="text" value="⌵"/>

OR

- Click **ECDS**.

WAAS ACNS ECDS

CDM Address	<input type="text"/>
Port	<input type="text"/>
User	<input type="text" value="superuser"/>
Password	<input type="password" value="*****"/>
Default CDS Service	<input type="text" value="⌵"/>

Step 5 Enter the values for your content distribution system.

Step 6 Click **Save**.

Step 7 Stop. You have completed this procedure.

- [Edit a Deployment Package, page 19-23](#)
- [Delete a Deployment Package, page 19-25](#)

Configure Deployment Threshold Preferences for DMS-CD

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Choose **Digital Media Players > Deployment Manager > Deployment Preferences**.

Step 3 Define the DMS-CD thresholds that should be applied by default in the future, when you transfer deployment packages.

- Enter or edit the requested values.
- Choose the deployment file transfer protocol, **FTP** or **SFTP**.
- Enable or disable a maximum transfer rate.

Changes to the maximum transfer rate will have no effect on deployments that are running already. They are applied to deployments that start after you save your changes.

Step 4 Click **Update** to save your work and put it into effect.

OR

Click **Cancel** to discard your work and restore the previous entries.

Step 5 Stop. You have completed this procedure.

Related Topics

- [Elements to Define Deployment Thresholds, page 19-26](#)
- [Create a Deployment Package, page 19-21](#)
- [Troubleshoot DMS-CD, page 19-31](#)

Check Disk Space Capacity for Deployments

Before You Begin

- Create DMP groups and populate them with DMPs.

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 Click in the **DMP Groups** object selector the name of the DMP group that contains the target DMP. The DMP List table is repopulated with the corresponding group membership list.

Step 4 (Optional) *Would you like to limit how many DMPs the DMP List table describes?*

Use filtering options above the table. You can filter by any of these criteria:

- DMP name
- DMP IP address
- DMP MAC address
- DMP status (Up/Down)
- DMP firmware version
- DMP model
- DMP description
- DMP location

Step 5 Add together for each row the first value that you see in the Internal Storage column and the first value that you see in the External Storage column.

Internal Storage	External Storage
28.05 / 29.8	0 / 0
2.64 / 2.86	0 / 0
0.83 / 0.98	0 / 0
27.93 / 29.8	0 / 0
1.63 / 2.85	0 / 0

The combination of these values is the total free capacity, in megabytes, on the corresponding DMP.

- Step 6** Compare the total free capacity to the expected size of your deployment package.
- When the total free capacity is sufficient, provision the assets in a deployment package, as planned.
 - When the total free capacity is not sufficient, do one of the following.
 - Reduce the size of the deployment package.
 - Delete unused or unimportant assets from the DMP.
 - Attach one external USB drive to the DMP if you have not attached one already.
 - Replace the external USB drive with one that has greater capacity.
- Step 7** Stop. You have completed this procedure.

Create a Deployment Package

Before You Begin

- Configure download threshold preferences for DMS-CD.
- Check the free disk space on your DMPs for storing provisioned assets.

Procedure

- Step 1** Click **Network and Endpoints** on the Home page.

- Step 1** Choose **Digital Media Players > Advanced Tasks**.

- Step 2** Click **Deployment Package** in the Application Types list.

Deployment Package

- Step 3** Click **Add New Application** above the Applications table.

[Add New Application](#)

- Step 4** Enter a name and description for this deployment package.

Add New Deployment Package

Name

Description

Mount Point

Emergency/Alarm

- Step 5** Choose the mount point for this deployment. You can choose only one.
- **Flash Storage** (also known as *usb_1*) is the SD memory card installed inside a DMP.
 - **USB** (also known as *usb_2*) is an external USB hard drive or flash memory drive that is attached to a DMP.

Tip To learn which external USB drives we support and have tested, see **Cisco DMS compatibility information on Cisco.com**. http://www.cisco.com/en/US/products/ps6681/products_device_support_tables_list.html.

- Step 6** Does this job consist of assets for an emergency notification?

- If so, check the **Emergency/Alarm** check box.
- If not, uncheck it.

- Step 7** Populate the deployment package.

The screenshot shows a configuration page with a left sidebar and a main content area. The sidebar lists various application types: Presentation, DMP Discovery, Cast, (Go to) URL, Playlist (highlighted in blue), File Transfer to DMP or server, DMP Startup URL, System Tasks, and DMP Firmware Upgrade. The main content area is titled 'Available Applications' and contains a table with columns 'Name' and 'Description'. The table lists three applications: 'video ppl' (checked), 'video+swf' (checked), and 'video tagppl' (unchecked). A green 'Select Application' button is located at the top right of the table. Below the table is a 'Selected Applications' section with a table that is currently empty, and control buttons for 'Move Up', 'Move Down', 'Delete', and 'Zoom in'.

- Click an application type in the Applications list.
- Check at least one saved application in the Available Applications table.
- Click **Select Application**.

- Step 8** Click **Submit**.

- Step 9** Use the **Channels** feature to schedule deployment of this package to your DMPs that should receive it. Then, wait for the file transfer to finish.

Tip **DMS-CD does not prevent you from using the Run Task feature to start transferring a DMS-CD deployment package immediately.** However, its immediacy defeats many of the most important benefits of using DMS-CD. We recommend instead that you use the Channels feature to schedule all of your DMS-CD deployment packages.

Bandwidth capacity in your WAN determines how long you must wait. After the deployment is finished, Cisco Digital Signs autogenerates the (Go To) URL action for this deployment package.

- Step 10** Choose **Digital Media Players > Advanced Task > (Go to) URL**.

- Step 11** Check that a (Go to) URL application was derived from your deployment task.

If one was generated, its name will append the prefix “LOCAL--” to the name that you entered in [Step 4](#).

Name	Description
LOCAL--Seamless loop-play to end	generated
LOCAL--self contained	generated
Video html5	

Step 12 Deploy this autogenerated (Go to) URL action.

- Use the Run Task feature on the DMP manager tab to deploy immediately.

OR

- Use the Channels feature to schedule a future deployment.

When you use Channels, the scheduled start and stop times are derived from the channel’s time zone.

Step 13 Stop. You have completed this procedure.

Related Topics

- [Delete a Deployment Package, page 19-25](#)

Edit a Deployment Package

Before You Begin

- Configure download threshold preferences for DMS-CD.
- Check the free disk space on your DMPs for storing provisioned assets.
- Create at least one DMS-CD deployment package.

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Choose **Digital Media Players > Advanced Tasks**.

Step 3 Click **Deployment Package** in the Application Types list.

Deployment Package

Step 4 Click the name of the application to be edited.

Step 5 Click **Edit Application** above the Applications table.

 Edit Application

Step 6 As needed, edit the name or description for this deployment package.

Step 7 Choose the mount point for this deployment. You can choose only one.

- **Flash Storage** (also known as *usb_1*) is the SD memory card installed inside a DMP.
- **USB** (also known as *usb_2*) is an external USB hard drive or flash memory drive that is attached to a DMP.

Tip To learn which external USB drives we support and have tested, see **Cisco DMS compatibility information on Cisco.com**. http://www.cisco.com/en/US/products/ps6681/products_device_support_tables_list.html.

Step 8 *Does this job consist of assets for an emergency notification?*

- If so, check the **Emergency/Alarm** check box.
- If not, uncheck it.

Step 9 **(Optional)** *Would you like to repopulate this deployment package?*

Repopulate and save it now.

- Click an application type in the Applications list.
- Check at least one saved application in the Available Applications table.
- Click **Select Application**.

Step 10 Click **Submit**.

Step 11 Use the **Channels** feature to schedule deployment of this package to your DMPs that should receive it. Then, wait for the file transfer to finish.

Tip **DMS-CD does not prevent you from using the Run Task feature to start transferring a DMS-CD deployment package immediately.** However, its immediacy defeats many of the most important benefits of using DMS-CD. We recommend instead that you use the Channels feature to schedule all of your DMS-CD deployment packages.

Bandwidth capacity in your WAN determines how long you must wait. After the deployment is finished, Cisco Digital Signs autogenerated the (Go To) URL action for this deployment package.

Step 12 Click **(Go to) URL** in the Application Types list.

Step 13 Check that a (Go to) URL application was derived from your deployment task.

If one was generated, its name will append the prefix “LOCAL--” to the name that you entered in [Step 4](#).

Name	Description
LOCAL--Seamless loop-play to end	generated
LOCAL--self contained	generated
Video html5	

- Step 14** Deploy this autogenerated (Go to) URL action.
- Use the Run Task feature on the DMP manager tab to deploy immediately.

OR

- Use the Channels feature to schedule a future deployment.

When you use Channels, the scheduled start and stop times are derived from the channel's time zone.

- Step 15** Stop. You have completed this procedure.

Related Topics

- [Configure Deployment Threshold Preferences for DMS-CD, page 19-19](#)
- [Create a Deployment Package, page 19-21](#)
- [Delete a Deployment Package, page 19-25](#)

Delete a Deployment Package

Before You Begin

- You must have saved at least one DMS-CD deployment package.
- Use the Reports feature (at Schedules > Reports) to search your schedule for any instances of the deployment package that you will delete. Remove each scheduled instances of it from your schedule.

Procedure

- Step 1** Click **Network and Endpoints** on the Home page.

- Step 2** Choose **Digital Media Players > Advanced Tasks**.

- Step 3** Click **Deployment Package** in the Application Types list.

Deployment Package

- Step 4** Click the name of the application to be deleted.

- Step 5** Click **Delete Application** above the Applications table.

 Delete Application

- Step 6** Click **Submit**.

Step 7 Click **(Go to) URL** in the Application Types list.

Step 8 Click the name of the application to be deleted.

Its name will append the prefix “LOCAL--” to the name that you entered as [Step 4](#) of the “[Create a Deployment Package](#)” procedure.

Step 9 Click **Delete Application** above the Applications table.

Step 10 Click **Submit**.

Step 11 Stop. You have completed this procedure.

Elements to Define Deployment Thresholds

Navigation Path

Network and Endpoints > Digital Media Players > Deployment Manager > Preferences

Table 19-5 Elements to Configure DMS-CD Deployment Thresholds

Element	Description
Number of concurrent deployments	<p>The maximum allowed number of FTP or SFTP threads, or <i>sessions</i>, that can run concurrently when DMS-CD provisions assets to DMPs.¹ Therefore, the maximum number of DMS-CD deployments that might possibly run concurrently in your WAN, if each such deployment targets only one DMP. Otherwise, when any deployments target multiple DMPs, this constraint limits how many DMPs can possibly receive deployments concurrently in your WAN.²</p> <p>Tip When you use DMS-CD, it is a best practice that none of your DMP groups should contain more than this number of DMPs. If you ever reduce this value, check that doing so has not caused any of your DMP groups to contain more DMPs than the new number.</p> <p>The permitted value is any whole number in the range from 1 to 1000. The factory-default value is 100 threads. We recommend that you avoid using any value greater than 100. Each incrementally higher value authorizes more concurrent DMS-CD deployments to DMPs and an increased load on your DMM appliance. You might try reducing this value if you notice that the CPU load is high on your DMM appliance during DMS-CD deployments.</p> <p>Note Any time that you change this value, you must restart your DMM appliance before the changed setting takes effect on your DMPs.</p>
Deployment time limit per file (in minutes)	<p>The count of how many minutes will be allowed to elapse after a DMS-CD deployment package begins to provision any file. Upon reaching this threshold, the file moves to the back of the queue and its transfer is deferred.</p> <p>The next file advances to the front of the queue and the deployment continues. DMS-CD applies this threshold to a deployment package as many times as necessary until it has cycled through all of its files, and then the transfer is resumed for a deferred file after it returns to the front of the queue. This threshold might cause the transfer of any especially large file to be distributed across days. Bottlenecks are prevented and as many assets are provisioned as can be provisioned.</p> <p>When you derive this value from the maximum transfer rate, large files in DMS-CD deployment packages are more likely to transfer quickly.</p> <p>The permitted value is any whole number in the range from 1 to 10080, where 10,080 minutes is the same as 168 hours or 7 days. The factory-default value is 1440 minutes, which is exactly 24 hours.</p>
Deployment retry count	<p>The count of how many times DMS-CD should try again to restart a failed deployment, until DMS-CD stops trying.</p> <p>In combination with the deployment retry time, this setting has significant impact on how long it takes DMS-CD to detect failed deployments. For example, 5 retries x 300 seconds = 1,500 seconds (25 minutes), while 5 retries x 30 seconds = 150 seconds (2.5 minutes).</p> <p>The permitted value is any whole number in the range from 1 to 100. The default value is 5 retries. We recommend that you do not change this value.</p>

Table 19-5 Elements to Configure DMS-CD Deployment Thresholds (continued)

Enable maximum transfer rate	<p>Enforces or ignores a maximum transfer rate that you specify.</p> <p>This rate is the upper threshold allowed for bandwidth consumption by DMS-CD during its deployments to any one DMP in your WAN. We measure this rate in kilobits per second (Kbps). The value that you enter should be less than the maximum transfer rate of your network.</p> <p>In combination with the Number of concurrent deployments value and the number of DMPs in a group that you target, this threshold limits how much bandwidth DMS-CD can consume during a deployment. For example, assume for a moment that QoS policies in your network limit DMS-CD bandwidth utilization to a maximum of 64 Kbps, and you have enabled the maximum transfer rate setting with a value of:</p> <ul style="list-style-type: none"> • 64 Kbps—Individual DMPs will each consume 64 Kbps per deployment. So, if you then set the number of concurrent deployments value to 10, you will use 64 Kbps x 10 = 640 Kbps. Furthermore, you cannot set the Number of concurrent deployments value any higher than 1, because 64 x 1 = 64. • 32 Kbps—Individual DMPs will each consume 32 Kbps per deployment. So, if you then set the number of concurrent deployments value to 10, you will use 32 Kbps x 10 = 320 Kbps. Furthermore, you cannot set the Number of concurrent deployments value any higher than 2, because 32 x 2 = 64. • 21 Kbps—Individual DMPs will each consume 21 Kbps per deployment. So, if you then set the number of concurrent deployments value to 10, you will use 21 Kbps x 10 = 210 Kbps. Furthermore, you cannot set the Number of concurrent deployments value any higher than 3, because 21 x 3 = 64. <p>The permitted value is any whole number in the range from 28 to 102400, where 102400 Kbps is the same as 100 Mbps. The factory-default setting ignores this threshold. If you prefer to enforce it, check the check box.</p>
Deployment Protocol	<p>FTP or SFTP, according to your security requirements.</p> <p>When you choose SFTP, connections are encrypted between your DMM server and your DMPs. Otherwise, these sessions use clear text. Even though the factory-default setting is FTP, we recommend that you use SFTP.</p>
Maximum file size (in MB)	<p>The maximum number of megabytes—per file—that DMS-CD will transport inside a multiframe deployment package to your DMPs, before the file that reached this threshold is moved to the back of the queue and its transfer is deferred.</p> <p>The next file advances to the front of the queue and the deployment continues. DMS-CD applies this threshold to a deployment package as many times as necessary until it has cycled through all of its files, and then the transfer is resumed for the deferred file after it returns to the front of the queue. This threshold might cause the transfer of any especially large file to be distributed across days. Bottlenecks are prevented and as many assets are provisioned as can be provisioned.</p> <p>The permitted value is any whole number in the range from 10 to 1024000, where 1,024,000 MB is the same as 1 TB. The factory-default maximum size is 600 MB.</p> <p>Note Although it is technically feasible to enter a file size as great as 1024000 MB, playback fails for any file that is larger than 1.9 GB, regardless of the DMP model type. This size is constrained by the limits of streaming.</p>

Table 19-5 Elements to Configure DMS-CD Deployment Thresholds (continued)

Deployment retry time (in seconds)	<p>The count of how many seconds must elapse before DMS-CD tries again to transfer a deployment package to a DMP on which the transfer failed or was interrupted. DMS-CD will never try to resume an interrupted or failed transfer until at least this many seconds have elapsed. When you edit this value, you change how quickly DMS-CD works around a failed or disrupted deployment.</p> <p>The permitted value is any whole number in the range from 5 to 10800, where 10800 is equal to 3 hours. The factory-default value is 300 seconds.</p>
Enable Resume	<p>Enables or disables the option to resume a DMS-CD file transfer that was interrupted. The factory-default behavior is to resume interrupted transfers. This behavior supports incremental transfer of large files through slow or unreliable networks over days.</p> <p>However, DMPs in this release do not have any ability to compare file modification time stamp values remotely. Our default behavior assumes that any static filename that persists at a static URI identifies a file that has never changed. So long as we retain a copy of the complete file as it existed while we transferred it, we will not check its URI again. This design does not consider that some assets might be dynamic, not static.</p> <p>You should deselect this check box and disable this feature when your assets are dynamic. After you disable this feature, DMS-CD will overwrite its copy of every asset whose file size has changed.</p>

1. Each such thread maintains a transfer rate that is equal to or less than the maximum transfer rate in your WAN.
2. Although you can schedule deployments to run concurrently among your various DMP groups, a DMP will serialize in a queue any overlapping deployments that it is targeted to receive. See [DMP Group Memberships](#), page 19-6.

Elements to Define a DMS-CD Deployment Package**Navigation Path**

Network and Endpoints > Digital Media Players > Advanced Tasks

Table 19-6 Understanding the Advanced Task to Define a DMS-CD Deployment Package

Application Name	Description, Icons, and Options
Deployment Package	
<i>Configure a DMS-CD deployment to DMP local storage.</i>	
Name	A unique and human-readable name for the deployment task that you are configuring for DMS-CD. You must enter a name. The name is unique in the sense that you have not used it previously as the name for anything that can be scheduled.
Description	A brief description. The description is optional.
Mount Point	<p>Choose whether the assets should be provisioned to the flash memory card inside the DMP (usb_1) or to the one external USB drive that you attached to the DMP (usb_2).</p> <p>Tip To learn which external USB drives we support and have tested, see Cisco DMS compatibility information on Cisco.com. http://www.cisco.com/en/US/products/ps6681/products_device_support_tables_list.html.</p>
Emergency/Alarm	Check (tick) this box if the transferred files will be used during emergencies. Otherwise, do not check this box. Assets for emergencies are saved to a special partition

Table 19-6 Understanding the Advanced Task to Define a DMS-CD Deployment Package (continued)

Application Name	Description, Icons, and Options
Deployment Package (continued)	
<i>Configure a DMS-CD deployment to DMP local storage. (continued)</i>	
Application Types	The list of categories for advanced tasks. Click a category to see its tasks.
Available Applications	Advanced tasks in the category that you clicked. Click anywhere in a row to select the corresponding task. <ul style="list-style-type: none">  Select Applications—Moves from the Available Applications table to the Selected Applications table the tasks that you selected. Name—The unique and human-readable name that identifies a particular task. Description—A brief description. The description is optional.
Selected Applications	Advanced tasks that you selected from the Available Applications table, so that you could include them in the file transfer operation that you are configuring. Click a file transfer task to select its assets for deployment. <ul style="list-style-type: none">  Move Selected Item Up/Down—Reorders the list so that the highlighted item moves up (or down) one row, exchanging places with the item that was above it (or below it).  Delete Selected Item—Moves from the Selected Applications table to the Available Applications table the applications that you selected.  Zoom In/Out—Shows only the Selected Applications table, hiding the Available Applications table. Alternatively, shows the Selected Applications table and the Available Applications table simultaneously.

Elements to Define WAAS, ACNS, or ECDS Settings

Navigation Path

Network and Endpoints > Settings > Media Delivery

Table 19-7 Elements for Using WAAS, ACNS, or ECDS

Element	Description
Would you like to configure settings for WAAS, ACNS or CDS at this time?	Either Yes or No. <ul style="list-style-type: none"> Yes— You will use one of these content distribution methods. No— You will not use any of these methods.

WAAS

User	The username for mounting the CIFS share.
Password	The password for mounting the CIFS share.
Share	The name of the CIFS share.
Hostname/IP	The hostname or IP address of the CIFS share server.

Table 19-7 Elements for Using WAAS, ACNS, or ECDS (continued)

Element	Description
ACNS	
CDM Address	The routable IP address or resolvable DNS hostname of the appliance or services module (“blade”) that runs ACNS and Content Distribution Manager software.
Port	The TCP port for login access to CDM. The port number by default is 8443.
User	The username for login access to CDM.
Password	The password that corresponds to the CDM username that you entered.
Default ACNS Channel	Choose from the list of channels.
ECDS	
CDM Address	The routable IP address or resolvable DNS hostname of the appliance or services module (“blade”) that runs ECDS and Content Distribution Manager software.
Port	The TCP port for login access to CDM. The port number by default is 8443.
User	The username for login access to CDM.
Password	The password that corresponds to the CDM username that you entered.
Default CDS Service	Choose from the list of services.

Check Deployment Status Details

**Tip**

Values in the Timestamp column always signify *one* of these:

- The moment when you clicked Publish All to provision the described deployment package.
- When the described deployment succeeded.
- When the described deployment failed.

Procedure

Step 1 Click **Network and Endpoints**.

Step 2 Choose **Digital Media Players > Deployment Manager > Deployment Status**.

Step 3 (Optional) *Would you like to limit how many deployment packages the table describes?* If so, use filtering options above the table.

Step 4 Examine the Status column for any use of the word “Failed.”

- Whenever you see that a deployment package has failed, click its  icon in the far right column.
- Examine the Deployment Details popup window for any error message that might help you to troubleshoot the failure.

For example, an error message could state that DMP login credentials were incorrect.

Step 5 Stop. You have completed this procedure.

Related Topics

- [Troubleshoot DMS-CD, page 19-31](#)

Check Appliance System Logs for Deployment Errors

Procedure

Step 1 Log in to AAI on your DMM appliance.

Step 2 Choose **DMM_CONTROL > DMM_LOG_LEVEL > DEBUG**, and ensure that the logs are verbose.

Step 3 Choose **APPLIANCE_CONTROL > GET_SYSLOG,.**

Step 4 Choose a method to receive the logfiles.

Step 5 Search through the **DMS-CD.log** and **catalina.out** logfiles for messages about:

- DMS-CD deployment events
- DMP deployment events
- Application deployment events
(in this case, “application” means “deployment package”)
- File management events
- Error events
- Debug logs

Step 6 Stop. You have completed this procedure.

Related Topics

- [Troubleshoot DMS-CD, page 19-31](#)

Use Snapshot Mode or Live Monitor Mode to Check for Deployment Errors

Procedure

Step 1 Click **Administration**.

Step 2 Choose **Alerts > Alert Reports**.

Step 3 Do one of the following.

- *Would you like to review **100 recent errors**?* **When you will use live mode**
 - a. Click **Live Monitor Mode**.
 - b. Choose an option from the Type list.
- *Would you like to review errors **between two time stamps**?* **When you will use snapshot mode**
 - a. Click **Snapshot Mode**.
 - b. Set a range of dates and a range of times.
 - c. Choose an option from the Type list.

Step 4 Click **Apply**.

Step 5 Stop. You have completed this procedure.

FAQs for ACNS**Q. Soon after I send copies of assets to my Content Engines, what prevents their playback on DMPs?**

A. Your network topology and available bandwidth affect how long it takes for content replication to finish. Before your DMPs can play assets from a Content Engine, these assets must *reach* the Content Engine. Delay the playback of replicated assets from your content distribution network, until you know that ACNS replication is finished.

Q. How can I verify when content replication is finished in CDNFS?

A. You can telnet to a Content Engine to verify this. To learn how, see your Content Engine product documentation.

FAQs for WAAS**Q. Why would a DMP 4310G in WAAS mode stop playing a video after 1 or 2 seconds?**

A. A combination of factors might trigger this behavior. To recover from it one time, restart your DMP. Or, to prevent this from happening, turn failover Off, set the recovery failover timeout to 1 millisecond, and the number of retries to 1. (**CSCtj85446**)

```
https://[DMP_IP_address]:7777/set_param?ciscocraft.mv_failover_timeout=1&ciscocraft.mv_failover_retries=1&mib.save=1&mng.reboot=1
```

Troubleshoot ACNS

- [Troubleshoot Choppy Playback of Videos from Your ACNS Network, page 19-34](#)
- [Troubleshoot Unlisted or Missing ACNS Channels in Digital Signs, page 19-37](#)
- [Troubleshoot ACNS Assets That Your DMPs Do Not Play, page 19-38](#)

Troubleshoot Choppy Playback of Videos from Your ACNS Network

- *Is the HTTP bit rate (bandwidth) setting too low on your Content Engine?*
- *Are too many DMPs using your Content Engine?*
- *Are HTTP requests from DMPs redirected correctly to your Content Engine?*
- *Is the HTTP proxy setting wrong in DMPDM to use a Content Engine as the proxy?*

Is the HTTP bit rate (bandwidth) setting too low on your Content Engine?

The factory-default bandwidth setting for HTTP sessions (up to 1.5Mbps) on a Content Engine is not sufficient for MPEG-2 video.

- SD MPEG-2 video requires approximately 5Mbps.
- HD MPEG-2 video requires approximately 15Mbps.

Use the **bitrate** command, as follows, to increase the maximum bandwidth on a Content Engine to 6Mbps per HTTP session.

```
bitrate http default 6000
```

Are too many DMPs using your Content Engine?

Two factors affect the upper limit for how many DMPs should use one Content Engine.

- The resolution of the MPEG-2 files that you use (SD or HD).
- The designed capacity of the Content Engine model that you use.

For example, the HTTP caching throughput is approximately 40Mbps on a Content Engine565, which means that this model cannot support any more than:

- Eight DMPs that play SD MPEG-2 video at 5Mbps.
- Two or three DMPs that play HD MPEG-2 video at 15Mbps.

Are HTTP requests from DMPs redirected correctly to your Content Engine?

1. Telnet to your Content Engine and issue this command:

```
show statistics http savings
```

2. Verify that the HTTP savings level is **high**.

OR

When you see that the HTTP savings level is **low**, verify that you have correctly configured your router and—if you use it on your Content Engine—transparent WCCP mode.

Troubleshoot Unlisted or Missing ACNS Channels in Digital Signs

- *Do time settings differ between Digital Signs and your ACNS server?*
- *Did you enter the wrong CDM port number, username, or password in Digital Signs?*
- *Did you use a recycled or duplicate ACNS channel name?*

Do time settings differ between Digital Signs and your ACNS server?

When time settings are not synchronized between your DMM appliance and your ACNS server, the differences might cause Digital Signs to reject the digital certificate from your ACNS server. We recommend that you configure your ACNS server, your DMM appliance, and each of your Content Engines to synchronize their time settings to an NTP server. ¹

CDM Procedure

1. Log in to Content Distribution Manager.
2. Choose **Devices > Device Groups**.
3. Expand the table of contents so that you see **General Settings > Services > Date/Time > NTP**, and then click **NTP**.
4. Check the Enable check box in the NTP Settings area.
5. Enter one ordinary IPv4 IP address in the NTP Server text box, to specify which NTP server you use.

OR

Enter as many as four such addresses, where each IP address is separated from its neighbor by one space.

6. Click **Submit**.

AAI Procedure

1. Log in to AAI on your DMM appliance.
 2. Choose **DATE_TIME_SETTINGS**, and then press **Enter**.
 3. Choose **NTP**, and then press **Enter**.
 4. Enter or choose the NTP settings, and then confirm each individual change.
 5. Press **Enter**.
-

Did you enter the wrong CDM port number, username, or password in Digital Signs?

Caution Well-known, factory-default values for Content Distribution Manager (CDM) become wrong in your network as soon as a CDM administrator overwrites them with secure values. You must use values that are actually correct in your network.

Be sure in Digital Signs to enter correct CDM values at Settings > ACNS Settings. These are the factory-default values for CDM.

- port number—**8443**
- username—**admin**
- password—**default**

Did you use a recycled or duplicate ACNS channel name?

You cannot duplicate or recycle channel names. See "Why do I see an HTTP 500 error when I use ACNS?"

1. Changing the time settings after you add content to the schedule might affect the availability of that content.

Troubleshoot ACNS Assets That Your DMPs Do Not Play

- *Is the ACNS channel origin server misconfigured?*
- *Is the ACNS channel quota misconfigured?*
- *Is the ACNS channel fully configured to use an external manifest file?*
- *Have you checked if any other content acquisition problems affect the external manifest file?*
- *Did anyone change the Time setting for your DMM appliance, but not restart it?*

Is the ACNS channel origin server misconfigured?

You must associate each origin server for any ACNS channel with the public IP address that one of these devices uses:

- Your DMM appliance.
 - The external publishing server that you use with Digital Signs.
 - The root Content Engine in your content delivery network.
-

Is the ACNS channel quota misconfigured?

Consider the following points when you configure the channel quota for DMS in CDM.

- On each Content Engine, the total disk space for the channel must not exceed the CDNFS disk space allocation.
- The combined size of all content files in a channel must not exceed the amount of disk space that you allocated for the channel in the Channel Quota field at Contents > Channels > Definition.

Worksheet

Due to overhead, a file uses more disk space than its own size. You can anticipate how much space to reserve for a file.

1. What is the actual file size in kilobytes (KB)?

File size in KB =

2. Divide the file size in KB by the file system's fixed block size in bytes—a 4096-byte unit.

File size in KB / 4096 =

3. Round up the quotient to the nearest integer. The result counts exactly how many 4 KB blocks the file has filled—or *partially* filled.

Used file system blocks =

4. Multiply the total number of used file system blocks by 4096 bytes. The result measures actual disk space consumption in bytes.

Total disk usage in bytes =

Note 4096 bytes x 4 = 16384.

The integer 4 represents disk space that is reserved for internal system usage.

5. Add 16384 to the total disk space consumption in bytes.

Minimum disk space to reserve =

Tip We recommend that you reserve 10 percent more space than you estimate the file will consume. This cushion ensures that space remains available to other internal system functions.

Is the ACNS channel fully configured to use an external manifest file?

1. Log in to CDM.
2. Choose **Services > Channels**.
3. Click **Channel Content** in the table of contents.
4. Click **Change Method**.
5. Check **Specify external manifest file**, and then click **Save**.
6. Enter any arbitrary text in the Manifest URL text box.
7. Enter **0** (zero) in the Check Manifest Every N mins text box.
8. Click **Submit**.

Later, each time that you publish content from Digital Signs to ACNS, your ACNS server automatically fills in the correct manifest location.

Have you checked if any other content acquisition problems affect the external manifest file?

1. Log in to CDM.
2. Choose **Services > Channels**.
3. Click **Channel Content** in the table of contents.
4. Click **Validate**, and then consider the following while you read the validation report:
 - Does any message at the end of the report say that your manifest file is correct?
 - Are your Content Engines in sync with the device that hosts your manifest file?
 - Does the manifest file refer to files that you use in the affected ACNS channel?

Did anyone change the Time setting for your DMM appliance, but not restart it?

You must restart your DMM appliance after the time setting is changed in AAI or in Digital Signs. Otherwise, some scheduled deliveries might not occur.

Use Channels to Play Rich Media

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 20-1](#)
- [Procedures, page 20-11](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will define and manage channels for Cisco Digital Signs.
- ✓ You will manage endpoint subscriptions to channels.
- ✓ You understand the mood that your community or organization wants to evoke at a given site.

Concepts

- [Overview, page 20-1](#)
- [Glossary, page 20-2](#)
- [Channel Examples, page 20-3](#)
- [Understand How Channels Prioritize Their Content, page 20-10](#)
- [Understand Time Basis Concepts, page 20-10](#)

Overview

Any organization can tailor its site-specific atmosphere for increased relevance and impact through its use of what we call *channels*. Each channel has its own programs, its own broadcast calendar, and its own time basis. Combined, these differentiators create a framework of flexibility that can extend to the most ambitious global deployments. But even so, channels are intrinsically simple enough and lightweight enough for small, local deployments.

Topics in this chapter explain core channel concepts in Cisco Digital Signs and guide you step-by-step through your planning, preparation, and deployment of channels. You will learn how to:

- Create channels that support your goals.
- Choose suitable programming for channels.
- Assign programs to channel dayparts.
- Subscribe endpoints to channels.

**Note**

You can trigger an emergency state on any DMP group. When a DMP group is in its emergency state, it plays emergency messages instead of the channel events that it is subscribed to play. A declared emergency in progress will always override channel content on emergency-affected DMPs.

Glossary

**Timesaver**

Go to terms that start with... [[C](#) | [D](#) | [P](#) | [S](#) | [T](#)].

C

channel

An endpoint-subscribable calendar and package of rich media programming for digital signs. Its central purpose is to support narrowcast messaging that engages a niche audience—to *create experiences in place*.

channel event

A time-limited activity, shared in common among the endpoints that subscribe to a channel. In most cases, an event tells your subscribed endpoints when to render rich media on your digital signs. However, you could just as easily create an event that serves some other purpose entirely—for example, activating endpoint NTP support or deactivating HDMI autodetection. The timing of an event at any given location is contingent upon its host channel's [time basis](#).

- Some events will play just one asset at a time. This kind of daypart might render just a live TV feed or an animated logo, for example.
- Other events will overlay multiple assets for simultaneous playback. This kind of daypart might combine a live video stream with corporate branding, scrolling text, and widgets, for example.
- A third kind of event will intersperse the other two kinds. In any case, your programming decisions for a channel and its events will shape the channel's personality, purpose, and scope.

D

default content

Content that your digital signs should play as needed, without any predefined schedule and without any manual intervention. In many cases, this playback is partial and fleeting because the only purpose of default content is to prevent noticeable playback gaps between more strategically significant assets. Your default content plays in a continuous loop until other content starts to play.

P

play now

Content that your digital signs should start playing instantaneously when you submit the command to start. Playback of this content continues until, at your discretion, one of the following occurs.

- You stop playback manually.
- Playback stops at a date and time that you set.
- The next scheduled event begins.

S

subscriptions Endpoints subscribe to channels, which supply rich media programming and playback schedules for digital signs.

T

time basis Logic that controls how subscribed endpoints understand and implement the start and stop times for events. A channel's time basis can be relative (to each endpoint's own physical time zone) or absolute to one internationally standard time zone that you choose from a list.

time-specific content Content whose playback will start and stop according to a schedule and repeat at set intervals, controlled by date, time, and repetition rules that you define.

Channel Examples

Topics in this section show you how you might apply the channels concept in various settings.

- [Airport Example, page 20-4](#)
- [Healthcare Example: Figure 20-1 on page 20-5](#)
- [Retail Banking Example: Figure 20-2 on page 20-6](#)
- [Retail Shopping Example: Figure 20-3 on page 20-7](#)
- [Education Example: Figure 20-4 on page 20-8](#)
- [Manufacturing Example: Figure 20-5 on page 20-9](#)

Airport Example

Just eight channels might target every typical niche for the public spaces in a major commercial airport.

Arrivals	Local Weather	Local Attractions	Services and Wayfinding
Departures	Remote Weather	Remote Attractions	World News Headlines

Meanwhile, a small regional airport might define even fewer channels.

Arrivals + Departures	Headlines + Weather	Announcements
------------------------------	----------------------------	----------------------

Healthcare Example

Just eight channels might target every typical niche for the public spaces in a hospital or clinic.

Figure 20-1 Healthcare Example

Wayfinding	Health-Positive	Good Neighbor	Advice Nurse
Waiting Room TV	Medication Safety	Translator	Success Stories

Retail Banking Example

Just eight channels might target every typical niche for the public spaces in a large, retail bank.

Figure 20-2 Retail Banking Example

Welcome	Account Services	Good Neighbor	Portfolio Management
Online + Mobile	Credit Cards	Small Business	Loans + Mortgages

Retail Shopping Example

Just eight channels might target every typical niche for the public spaces in a retail department store.

Figure 20-3 Retail Shopping Example

Store Entrance	Point-of-Purchase	Point-of-Sale	Designer Showcase
Store Exit	Customer Rewards	Wayfinding	In-Store Services

Education Example

Just eight channels might target every typical niche for the public spaces at a school or university.

Figure 20-4 Education Example

Events	Menu + Nutrition	Announcements	Course Materials
Remote Experts	Safety + Security	Advice Nurse	Faculty Training

Manufacturing Example

Just eight channels might target every typical niche on a factory floor.

Figure 20-5 Manufacturing Example

Shift Rotation	Advice Nurse	Metrics + KPI	Recognition
Tips + Training	Executive Communications	Industry Headlines	Safety

Understand How Channels Prioritize Their Content

Special event	OVERRIDES SCHEDULED PROGRAMS —Unscheduled content that pre-empts time-specific content. For example, the special event might be an important political speech or business announcement.
Scheduled program	OVERRIDES FILLER —Predictable, anticipated content that subscribed endpoints play at definite times and then repeat at definite intervals.
Filler	OVERRIDES NOTHING —Typically, the “default content” for a channel would include only one quick loop of general assets. For example, it might string together an animation of your logo, a montage of human faces, and a few very short video clips that each convey something essential about your vision. Your digital signs can then use this content intelligently, as needed, to prevent noticeable playback gaps between other assets that play.

Note

When you declare an emergency that affects one or more of your DMP groups, the affected DMPs stop all content playback from their subscribed channels.

Understand Time Basis Concepts

The time basis that you set for a channel affects when its subscribed DMP endpoints render media for playback on digital signs. The time basis can be relative to each DMP individually or absolute to one time zone that you choose from a list. Thus, the time basis flexibility of channels helps to support global deployments of digital signs. But this same flexibility ensures that channels can be just as relevant and useful to small deployments as they are to large ones.

The time basis concept can become complicated in practice if you do not understand and plan appropriately for its possible effects.

Relative to DMP Time Zone

Suppose that you make the time basis for a channel relative to each of its subscribed endpoints.

- *Do these subscribed endpoints all share their local time zone in common?*

If so, the effect is no different than choosing this time zone absolutely. An event that runs on the channel will start and stop at precisely the same time on each subscribed endpoint. Any time of day occurs simultaneously across them all, without any offset or unexpected complexity.

- *Do these subscribed endpoints operate so remotely from each other that the local time zone will ever differ among them?*

If so, the physical distribution of these endpoints could mean that the relative time of day on any two endpoints is offset by 1 or more hours. Consider the continental United States, where noon in New York occurs a full 3 hours before noon the same day in San Francisco.

Absolute to <your choice from the Time Zone menu>

Suppose that you choose one absolute time zone as the time basis for a channel to impose on its subscribed endpoints.

- *Do these subscribed endpoints all share their local time zone in common?*
 - **And is this exactly the same time zone that you chose to enforce absolutely?**

If so, the effect is no different than choosing a relative time basis for this channel. An event that runs on the channel will start and stop at precisely the same time on each subscribed endpoint. Any time of day occurs simultaneously across them all, without any offset or unexpected complexity.

Note

Compare and consider the time basis of when you change the subscription of a DMP group from one channel to another.

Procedures

- [Work with Channels Generally, page 20-11](#)
- [Work with Channel Details, page 20-19](#)
- [Work with Channel Events, page 20-32](#)
- [Work with Channel Subscriptions, page 20-34](#)

Work with Channels Generally

- [View and Filter Channels, page 20-12](#)
- [Add a Channel, page 20-13](#)
- [Tag a Channel, page 20-15](#)
- [Edit a Channel, page 20-16](#)
- [Duplicate a Channel, page 20-17](#)
- [Delete a Channel, page 20-18](#)

View and Filter Channels

You can view a list of every channel or you can limit the list to include only a subset of channels.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must create channels before you can view or filter the channels list.

Procedure

Step 1 Click Content Management.

Step 2 Click Channels.

Your browser loads the All Channels table alongside its filtering controls.

Tip If you haven't yet created any channels, the All Channels table is empty. However, you can click [Create Channel](#) at any time to get started.

Step 3 (Optional) Use standard pagination controls under the All Channels table, as needed, to navigate through your channels.

Step 4 (Optional) Click the corresponding column heading, as needed, to sort the table by channel name, content type, or number of subscribers.

Step 5 (Optional) Use standard filtering controls next to the All Channels table, as needed, to limit which channels the table should include. You can filter by:

- channel name

- channel tags

type to filter tags

0 item(s) selected

- channel modification date

Custom Range:

From: 

To: 

The All Channels table repopulates itself each time that you submit a new filter.

Tip You can clear these filters at any time. Just click [Clear Filters](#).

Step 6 Stop. You have completed this procedure.

Add a Channel

You can create and define new [channels](#) at any time.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).

Procedure

Step 1 Click **Content Management**.

Step 2 Click **Channels**.

Step 3 Click **Create Channel**.

The New Channel setup assistant opens. It can guide you through all of the phases to create and define your new channel. Alternatively, you can name and save your channel now, but then define it later.

Phase	Configurable Values and Options	Mandatory Before You Can	
		Save a Channel?	Use a Channel?
1 Define Channel Properties	Title	Yes	Yes
	Description	No	No
	Tags		Yes
	Time Basis		
2 Select Default Content		No	Yes
3 Add Time-based Events	Select an Application to Add	No	Yes
	Specify Content Settings		
4 Review		No	No

Step 4 Do one of the following.

- *Would you like to save the channel immediately but define it later?*

When you will create and save a channel but not define it

- Enter a unique name in the Title field.
- Click **Next**.

A confirmation message loads briefly and then fades away.

 Your channel has been successfully saved.

- *Would you like to define channel attributes immediately?*

When you will define a channel immediately upon its creation

- Repeat as needed.
 - Enter values and choose options for a phase.
 - Click **Next** when you finish a phase.
- (Optional) Subscribe DMP groups to the channel.
- Click **Done**.

Step 5 Stop. You have completed this procedure.

Tag a Channel

You can assign “folksonomy” tags to your channels. The more effectively you tag your channels, the more efficiently you can filter to the exact channels that matter to you in a given moment.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).

Procedure

Step 1 See the procedure, elsewhere in this guide, to [add](#) a channel.

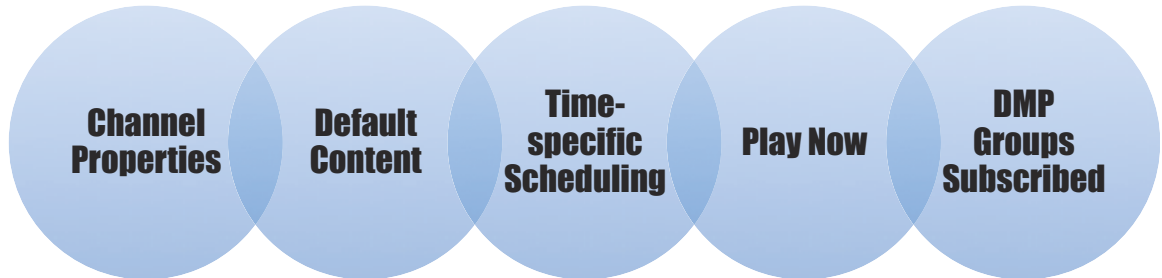

Tip **Tagging a new channel is just one part of creating the channel.**

Related Topics

- [Add a Channel, page 20-13](#)

Edit a Channel

You can edit the fundamental attributes of any channel.

**Before You Begin**

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must create channels before you can edit them.

Procedure**Step 1** Click **Content Management**.**Step 2** Click **Channels**.**Step 3** Click a row in the All Channels table to highlight it. Then, click **Edit** (✎) where your highlighted row meets the Actions column.

The Channels page now loads a sub-tab where you can edit attributes of the selected channel.

Step 4 Click a heading to edit its values.

Channel Properties	<i>The channel title, description, tags, and name basis.</i>
Default Content	<i>See the “default content” glossary definition.</i>
Time-specific Scheduling	<i>See the “time-specific content” glossary definition.</i>
Play Now	<i>See the “play now” glossary definition.</i>
DMP Groups Subscribed	

Step 5 Stop. You have completed this procedure.

Duplicate a Channel

To simplify reuse, you can generate an almost exact duplicate of any channel.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must create channels before you can duplicate them.

Procedure

Step 1 Click **Content Management**.

Step 2 Click **Channels**.

Step 3 Click a row in the All Channels table to highlight it. Then, click **Duplicate** (📄) where your highlighted row meets the Actions column.

**Tip**

When you first generate a duplicate channel, the only significant difference from its parent is the absence of any subscribers. However, you can increase the scope of difference.

- Step 4** Configure how else the duplicate channel should differ—if at all—from its parent.
- Edit any channel properties that should differ.
 - Choose any default content that should differ.
 - Choose any time-specific content that should differ. Then, configure its relationship to time.
 - Choose any play now content that should differ.
 - Add or remove subscribers, as needed.
- Step 5** Click Save.
Any changes take effect immediately on all DMP groups that are subscribed to the duplicate channel.
- Step 6** Stop. You have completed this procedure.

Delete a Channel

You can delete a channel.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must create channels before you can delete them.

Procedure

- Step 1** Click **Content Management**.

- Step 2** Click **Channels**.

Your browser loads the All Channels table alongside its filtering controls.

- Step 3** (Optional) Use standard pagination controls under the All Channels table, as needed, to navigate through your channels.

- Step 4** (Optional) Click the corresponding column heading, as needed, to sort the table by channel name, content type, or number of subscribers.

Step 5 (Optional) Use standard filtering controls next to the All Channels table, as needed, to limit which channels the table should include. You can filter by:

- channel name
- channel tags

0 Item(s) selected
- channel modification date Custom Range:
From:
To:

The All Channels table repopulates itself each time that you submit a new filter.

Tip You can clear these filters at any time. Just click .

Step 6 Click a row in the All Channels table to highlight it. Then, click **Delete** () where your highlighted row meets the Actions column.

Step 7 Click **Yes** to confirm that you are deleting the channel deliberately.
The channel is deleted.

Step 8 Stop. You have completed this procedure.

Work with Channel Details

- [Channel Properties, page 20-19](#)
- [Default Content, page 20-21](#)
- [Time-specific Content, page 20-23](#)
- [Play Now Content, page 20-27](#)

Channel Properties

- [Define Channel Properties, page 20-20](#)
- [Change Channel Properties, page 20-20](#)

Define Channel Properties

You can define the basic properties of a new channel.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).

Procedure

Step 1 See the procedure, elsewhere in this guide, to [add](#) a channel.

Tip

Defining the basic properties of a new channel is just one part of creating the channel.

Related Topics

- [Add a Channel, page 20-13](#)

Change Channel Properties

You can redefine the properties of a channel.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).

Procedure

Step 1 Click **Content Management**.

Step 2 Click **Channels**.

Step 3 Click a row in the All Channels table to highlight it. Then, click **Edit** (✎) where your highlighted row meets the Actions column.

The Channels page now loads a sub-tab where you can edit attributes of the selected channel. Its “Channel Properties” heading is selected by default.

The screenshot shows the 'Channel Properties' configuration page. At the top, there are two tabs: 'All Channels' and 'Your Channel Here'. Below the tabs are several navigation links: 'Channel Properties', 'Default Content', 'Time-specific Scheduling', 'Play Now', and 'DMP Groups Subscribed'. The 'Channel Properties' section includes the following fields and controls:

- Title:** A text input field containing 'Your Channel Here' with a red 'required' label to its right.
- Description:** A larger text input field.
- Tags:** A label 'not yet tagged' above a text input field containing 'type to filter tags' and a blue 'Add' button.
- Time Basis:** Two radio buttons: 'Relative to DMP time zone' (unselected) and 'Absolute to' (selected). Next to 'Absolute to' is a dropdown menu showing 'US/Pacific'.
- CDN Channel:** A dropdown menu.
- Default Content Preposition delay:** A label with an information icon, followed by 'Hours: 0' and 'Minutes: 10', each with up/down arrows.

At the bottom of the form are two buttons: a blue 'Save' button and a grey 'Cancel' button.

Step 4 Edit the values, as needed. Then, click **Save**.

The change takes effect immediately on all DMP groups that are subscribed to this channel.

Step 5 Stop. You have completed this procedure.

Default Content

- [Choose Default Content for a Channel, page 20-21](#)
- [Change the Default Content for a Channel, page 20-22](#)

Choose Default Content for a Channel

You can choose the [default content](#) for any new channel.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).

Procedure

Step 1 See the procedure, elsewhere in this guide, to [add](#) a channel.

Tip **Choosing the default content for a new channel is just one part of creating the channel.**

Related Topics

- [Add a Channel, page 20-13](#)

Change the Default Content for a Channel

You can change the [default content](#) for any channel.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).

Procedure**Step 1** Click **Content Management**.**Step 2** Click **Channels**.**Step 3** Click a row in the All Channels table to highlight it. Then, click **Edit** (✎) where your highlighted row meets the Actions column.

The Channels page now loads a sub-tab where you can edit attributes of the selected channel.

**Step 4** Click the **Default Content** heading to edit its values.

Step 5 Do one of the following to choose content from the default content selector.

Title	Description
Auto-Created Playlist 000001	Auto-Created Playlist 000001 by API
Auto-Created Playlist 000002	Auto-Created Playlist 000002 by API
Auto-Created Playlist 000003	Auto-Created Playlist 000003 by API
Auto-Created Playlist 000004	Auto-Created Playlist 000004 by API
Auto-Created Playlist 000005	Auto-Created Playlist 000005 by API
Auto-Created Playlist 000006	Auto-Created Playlist 000006 by API

Auto-Created Playlist 000009	Auto-Created Playlist 000009 by API
Auto-Created Playlist 000010	Auto-Created Playlist 000010 by API

- Click **Playlist** to populate the selector with a list of your saved playlists.
- Click **Presentation** to populate the selector with a list of your saved presentations.
- Click **Go To URL** to populate the selector with a list of your saved Go To URLs.

Step 6 Click the content that your digital signs should play. Then, click **OK**.

Note You can choose only one.

The change takes effect immediately on all DMP groups that are subscribed to this channel.

Step 7 Stop. You have completed this procedure.

Time-specific Content

- [Choose Time-specific Content for a Channel, page 20-24](#)
- [Change the Time-specific Content for a Channel, page 20-24](#)

Choose Time-specific Content for a Channel

You can choose the time-specific content for a new channel during channel creation. Time-specific content is what a channel shows routinely. It is the very foundation of a channel's identity.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).

Procedure

Step 1 See the procedure, elsewhere in this guide, to [add](#) a channel.

Tip Choosing the time-specific content for a channel is just one part of creating the channel.

Related Topics

- [Add a Channel, page 20-13](#)

Change the Time-specific Content for a Channel

You can change the time-specific content for a channel. Time-specific content is what a channel shows routinely. It is the very foundation of a channel's identity.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).

Procedure

Step 1 Click **Content Management**.

Step 2 Click **Channels**.

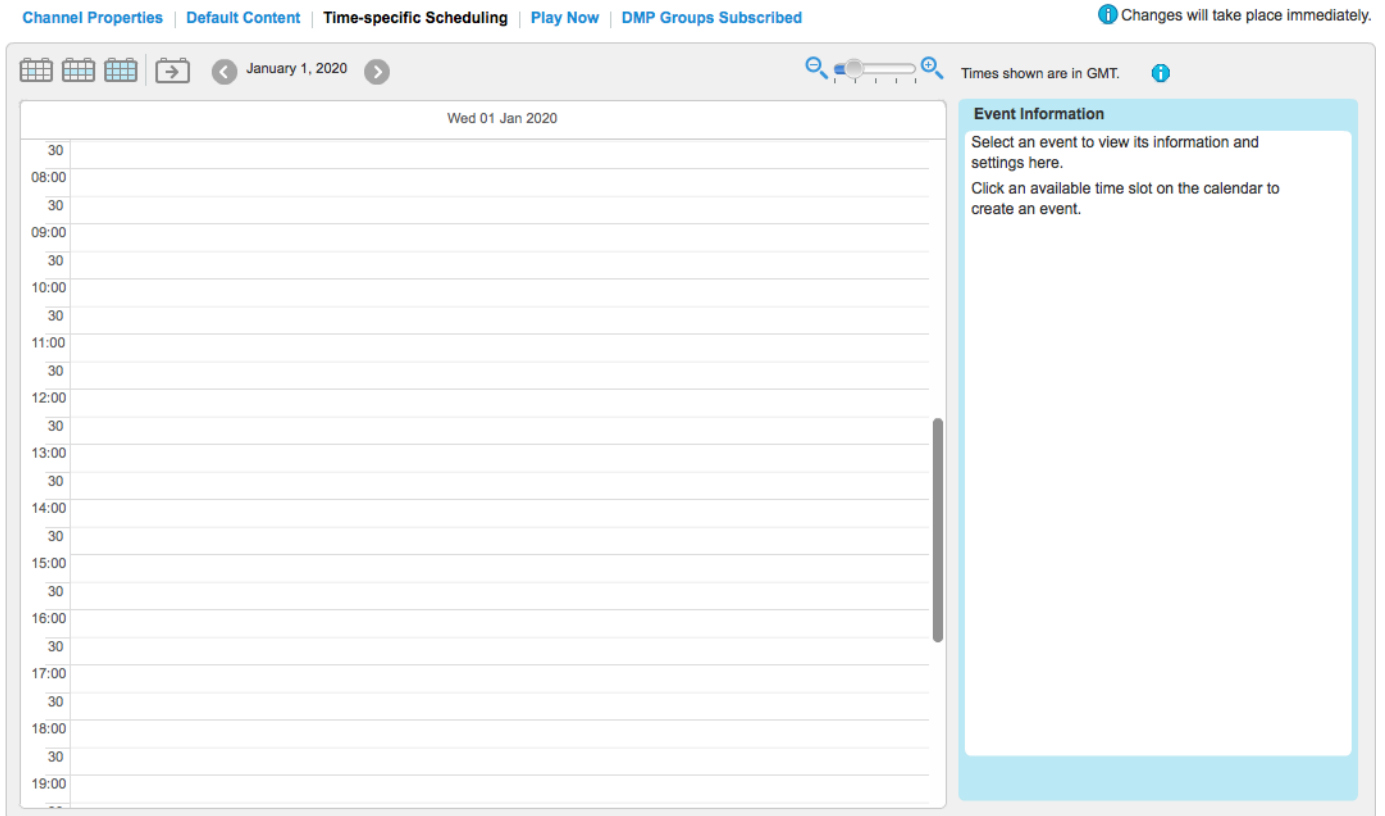

Step 3 Click a row in the All Channels table to highlight it. Then, click **Edit** (✎) where your highlighted row meets the Actions column.

The Channels page now loads a sub-tab where you can edit attributes of the selected channel.

Step 4 Click the **Time-specific Scheduling** heading to edit its values.

Step 5 When the timeline appears, navigate as needed to a date where you want to add time-specific content.

Step 6 Click anywhere on the calendar timeline to start adding an event to it.

Step 7 Do one of the following to choose content from the selector.

- Click **Playlist** to populate the selector with a list of your saved playlists.
- Click **Presentation** to populate the selector with a list of your saved presentations.
- Click **Go To URL** to populate the selector with a list of your saved Go To URLs.

Step 8 Click the content that your digital signs should play. Then, click **Next**.

Note You can choose only one.

Step 9 Configure the event's relationship to time.

Add event

1. Selected application name: audi

2. Specify content settings

Time settings

Start: 2020-01-01 [calendar icon]

1 : 30 : 0 AM PM

End: 2020-01-31 [calendar icon]

2 : 0 : 0 AM PM

Repeat options

Do not repeat [dropdown arrow]

until [text box] [calendar icon]

Add to Calendar Cancel

- a. Choose the date and time when playback should start.
- b. Choose the date and time when playback should stop.
- c. Choose whether the event should ever be repeated. And if so:
 - Choose the interval between instances.
 - Set the date of its final instance.

Step 10 Click **Add to Calendar**.

The change takes effect immediately on all DMP groups that are subscribed to this channel.

Step 11 Stop. You have completed this procedure.

Play Now Content

Work with Channel Events

- [Add an Event to a Channel, page 20-32](#)
- [Duplicate an Event from a Channel, page 20-32](#)
- [Delete an Event from a Channel, page 20-33](#)

Add an Event to a Channel

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must create channels before you can add or edit their events.

Procedure

- Step 1** See the procedure, elsewhere in this guide, to [add](#) a channel.

Tip **Choosing the play now content for a channel is just one part of creating the channel.**

Related Topics

- [Add a Channel, page 20-13](#)

Duplicate an Event from a Channel

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must create channel events before you can duplicate them.

Procedure

- Step 1** Click **Content Management**.

- Step 2** Click **Channels**.

Step 3 Click a row in the All Channels table to highlight it. Then, click **Edit** () where your highlighted row meets the Actions column.

The Channels page now loads a sub-tab where you can edit attributes of the selected channel.

Step 4 Click the **Time-specific Scheduling** heading to start duplicating an event.

- a. Navigate to your event on the timeline.
- b. Click your event to highlight it on the timeline.

Details in the Event Information pane now describe your event.

Step 5 Click  (**Duplicate**) in the Event Information pane.

Essential information about the highlighted event is now copied to your clipboard.

Tip Your computer pointer is changed, temporarily, to . However, it will return to its usual state after you complete or cancel the duplication job.

Step 6 Paste the duplicate event into your channel by clicking any available time slot.

You can repeat this step as often as needed.

Step 7 Press **Esc** to clear your clipboard.

Step 8 Stop. You have completed this procedure.

Delete an Event from a Channel

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must create channel events before you can delete them.

Procedure

Step 1 Click **Content Management**.

Step 2 Click **Channels**.

- Step 3** Click a row in the All Channels table to highlight it. Then, click **Edit** () where your highlighted row meets the Actions column.

The Channels page now loads a sub-tab where you can edit attributes of the selected channel.

- Step 4** Click the **Time-specific Scheduling** heading to start duplicating an event.
- a. Navigate to your event on the timeline.
 - b. Click your event to highlight it on the timeline.
- Details in the Event Information pane now describe your event.

- Step 5** Click  (**Delete**) in the Event Information pane.

- Step 6** Click **Yes** to confirm that you are deleting the event deliberately.

The event is deleted.

- Step 7** Stop. You have completed this procedure.

Work with Channel Subscriptions

- [Subscribe Endpoints to a Channel, page 20-34](#)
- [Unsubscribe Endpoints from a Channel, page 20-35](#)

Subscribe Endpoints to a Channel

You can subscribe DMP groups to a channel at any time.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must create a channel before you can subscribe any endpoints to it.

Procedure

Step 1 Click **Content Management**.

Step 2 Click **Channels**.

Step 3 Click a row in the All Channels table to highlight it. Then, click **Edit** () where your highlighted row meets the Actions column.

The Channels page now loads a sub-tab where you can edit attributes of the selected channel.

Step 4 Click the **DMP Groups Subscribed** heading to edit subscribers.

Expand / Collapse All

DMP Group	Description	Total DMPs	DMP Subgroups	DMP Subgroups Subscribed To This ...	Subscribe
▶ ALL DMPs		100	7	0 subscribed	Yes No

Step 5 When the DMP groups selection tree appears, expand and collapse its levels of nesting, as needed, to show the group that interests you.

Step 6 Click **Yes** in the Subscribe column to toggle this group's subscription On.

The change takes effect immediately. The group is now subscribed.

Step 7 Stop. You have completed this procedure.

Unsubscribe Endpoints from a Channel

You can unsubscribe DMP groups from a channel at any time, assuming they are first subscribed to it.

Before You Begin

- Your user account permissions must include content management (at Network and Endpoints > Settings > User Accounts).
- You must subscribe endpoints to a channel before you can unsubscribe them.

Procedure

Step 1 Click Content Management.

Step 2 Click Channels.

Step 3 Click a row in the All Channels table to highlight it. Then, click **Edit** (✎) where your highlighted row meets the Actions column.

The Channels page now loads a sub-tab where you can edit attributes of the selected channel.

Step 4 Click the DMP Groups Subscribed heading to edit subscribers.

Expand / Collapse All

DMP Group	Description	Total DMPs	DMP Subgroups	DMP Subgroups Subscribed To This ...	Subscribe
▶ ALL DMPs		100	7	0 subscribed	Yes No

Step 5 When the DMP groups selection tree appears, expand and collapse its levels of nesting, as needed, to show the group that interests you.

Step 6 Click **No** in the Subscribe column to toggle this group's subscription Off.

The change takes effect immediately. The group is now unsubscribed.

Step 7 Stop. You have completed this procedure.

Proof of Play

Revised: May 4, 2015
OL-15762-05

- [Concepts](#)
- [Procedures](#)
- [Reference](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will audit and run reports that demonstrate your playback of media assets on your Cisco Digital Signs.
-

Concepts

- [Overview, page 21-1](#)
- [Glossary, page 21-3](#)
- [Campaigns \(Formerly, Insertions\), page 21-3](#)
- [Workflow, page 21-4](#)

Overview

You can audit which assets your DMPs play, and where, and when, and for how long—across any supported range of dates that you specify.

Proof of play reports are available per DMP, per DMP group, and per *campaign*. We use a dedicated proof of play service to collect these records and generate these reports.

Restrictions

Caution

Proof-of-play features fail unless:

- The Syslog Collector IP Address entry in DMPDM points to your DMM appliance.
 - The fully qualified domain name of your DMM appliance contains fewer than 30 characters.
-

- [Implications of Changing the DMM Appliance Hostname, page 21-2](#)
- [Implications of Changing the User Authentication Method, page 21-2](#)

Implications of Changing the DMM Appliance Hostname

Will you use AAI to change the hostname of a DMM appliance on which proof-of-play features are enabled (CSCtr00731)? There is no common reason to do this. We recommend that you do not. Nonetheless, we will not stop you.

BEFORE YOU CHANGE THE HOSTNAME

- Export your proof-of-play logs.

AFTER YOU CHANGE THE HOSTNAME

- Log in to the web interface for DMM at its new hostname. Then, reconfigure the proof-of-play feature immediately.

WHY IS THIS NECESSARY?

We assume that your information is confidential and we strive to protect it from unauthorized access. Therefore, DMM self-registration of a feature license considers the combination of the appliance hostname and its hardware serial number.

After its appliance hostname is changed, DMM will reject its prior self-registration of your license to use proof-of-play features. Although the license is still valid and is still correctly associated with your hardware serial number, your DMM appliance cannot load proof-of-play logs from any server whose hostname differs from its own. **It cannot read from them** or write to them. Likewise, you cannot use proof-of-play features on any host but the one that self-registered the license.

Although you can return a hostname to its original value, doing so still might not be sufficient to satisfy an ongoing requirement for full and uninterrupted access to proof-of-play features and logfiles. Consider this scenario.

1. The hostname is changed from **A** to **B**. Therefore, **B** cannot use the feature license that **A** self-registered and cannot use the logfiles that DMM generated on behalf of **A**.
2. The hostname is then returned to **A**. Therefore, **A** can access its own data from any time when the hostname was **A**, including the original instance. However, it cannot use the feature license that **B** self-registered and cannot use the logfiles that DMM generated on behalf of **B**.

We recommend that you prevent these complications and disruptions by leaving the hostname in its original state.

Implications of Changing the User Authentication Method

Will you change the user authentication method from LDAP mode to Federation mode (SSO) for a Cisco DMS deployment that includes proof of play (CSCtq55094)? Fundamental changes to user authentication are not routine but can be useful occasionally.

However, account records in the new SSO user base might not correspond exactly to account records in the old LDAP user base. It is possible, in fact, that some long-established login credentials might cease to be valid for Cisco DMS users. And so, if the proof-of-play user role assignment in your network is associated with one of these nullified user accounts, the affected user cannot view proof-of-play campaigns or run reports for campaigns.

In this case, you must assign the proof-of-play role to a user account that exists in the SSO user base.

Implications of Changing Which Assets a Playlist Includes

In this release, proof-of-play reports for a given playlist during a given time range might not be correct (CSCTR97593). In some cases, these reports can:

- Omit playback records retroactively for assets that you trimmed from the playlist at a later time. (These assets were once correctly part of the playlist and their playback count from that time is relevant to this report.)
- Insert playback records retroactively for assets that you added to the playlist at a later time. (These assets were once correctly excluded from the playlist and their playback count from that time is not relevant to this report.)

Glossary

Timesaver

Go to terms that start with... [[C](#) | [R](#)].

C

campaign

The campaign or other common goal among any one set of presentations, playlists, and assets that you consider an affinity group.

Note In previous releases, we called campaigns “*insertions*.”

R

[Return to Top](#)

requestor

The agency or other entity that requests a campaign or prepares resources for a campaign.

Campaigns (Formerly, Insertions)

Cisco Digital Signs includes methods to identify and assemble an affinity group from any combination of presentations, playlists, and assets. We call this affinity group package a *campaign*.

Mingled elements within a campaign all share one clear and unifying purpose. For example, the elements of your first campaign might all advertise a community celebration, even though they use various languages or differ in other, key ways. However, you recognize for your own purposes that at least one significant factor (the community celebration, in this example) unites them as an affinity group.

The benefit of campaigns is that you can audit and verify the scope of playback—individually and collectively—for all elements that support one goal, initiative, policy, or event. On a DMP-by-DMP basis, you can discover and demonstrate exactly which assets:

- Played successfully, and when.
- Were interrupted or prevented from playing, and when.

**Note**

- **Proof of play features in Cisco Digital Signs ignore the playback of assets that Cisco developed—including all samples and templates that you received with any previous DMM release.**
- **Syslog data provides the start and stop time stamps for playback.** From time to time, some of these time stamps might seem wrong even though they are technically correct. In this case, puzzling results will report a playback duration of 0 min and 0 sec for any campaign element whose start time and stop time were identical—for any reason. The likeliest explanation is that a stop command interrupted playback coincidentally during the same second in which a campaign element was scheduled to start playback (CSCtr57386).

A populated campaign audits the playback of:

- Each asset that you reference *directly*, as a single element regardless of its context.
- Each asset that you reference *indirectly*, as one element within the context of a playlist or presentation.

Workflow

1. Add assets to your media library.
2. Develop, schedule, and publish presentations and playlists.
3. Define report collection parameters for proof-of-play.
4. Run reports.

Procedures

- [Prepare DMPs to Support Proof of Play, page 21-4](#)

Prepare DMPs to Support Proof of Play

- [Enable Syslog and NTP, page 21-5](#)
- [Enable Proof of Play Features in DMM, page 21-6](#)

Enable Syslog and NTP

Procedure

Step 1 Do one of the following.

- *Would you like to enable these services from Digital Signs?* **Use elements in Digital Signs to enable these services.**

a. Click **Network and Endpoints** on the Home page.

b. Choose **Digital Media Players > Advanced Tasks**.

c. Click **System Tasks** in the Application Types list.

d. Click **Add New Application** above the Applications table.

e. Enter a meaningful name in the Name field, such as **Enable PoP access on DMPs**.

f. Choose **Set** from the Request Type list. Then, enter this string:

```
init.syslog=on&init.syslog_collector=<DMM_routable_IP>&mib.save=1
&mng.reboot=1
```

g. Click **Submit**.

h. Click **OK**.

i. Deploy to all DMPs that should support proof of play.

- *Would you like to enable these services from DMPDM?*
 - a. Click **Browser** in the Settings list.
 - b. Enter the routable IP address of your DMM appliance in the Syslog Collector IP Address field.
 - c. Click **Apply**.
 - d. Click **NTP** in the Settings list, and then choose **On** from the Enable NTP Service list.
 - e. Enter **pool.ntp.org** in the Hostname 1 field, if you have not already done so.
 - f. Choose your locale from the Time Zone list. Then, click **Apply**.
 - g. Click **Save and Restart DMP** in the Administration list.

- h. Click **Save**. Then, click **Restart**.

Step 2 Stop. You have completed this procedure.

Enable Proof of Play Features in DMM

Procedure

- Step 1** Log in as superuser.
- Step 2** Click **Reports** on the Home page.

- Step 3** Click **Configuration**.
- Step 4** Enter the fully qualified, DNS-resolvable DMM appliance domain name in the DMM FQDN field.
For example: *dmm.example.com*
- Step 5** Click **Register**.
- Step 6** Use fields in the Authentication area to enter the superuser name and password for your DMM appliance.

- Step 7** Define settings in the Data Size/Rotation Rules area.
- Step 8** Choose an option in the Archiving Rules area to set how many days of playback data to accumulate before archiving it.
- Step 9** Click **Update**.
- Step 10** Stop. You have completed this procedure.
-

Create Requestors

Procedure

- Step 1** Click **Reports** on the Home page.

- Step 2** Click **Campaign**. Then, click **Manage Requestors**.
The Manage Requestors dialog box opens.
- Step 3** Click **Add New Requestors**.
The Add New Requestor dialog box opens.
- Step 4** Enter a name.
- Step 5** **(Optional)** Enter a description.
- Step 6** Click **Save**.
- Step 7** Stop. You have completed this procedure.
-

Create Campaigns

Procedure

Step 1 Click **Reports** on the Home page.

Step 2 Click **Campaign**. Then, click **Create Campaign**.

The Create New Campaign dialog box opens.

Step 3 Enter a name for this campaign.

Step 4 Associate a requestor with this campaign.

Step 5 Choose when this campaign should become active, and then choose when it should stop.

Step 6 Click **Add Content**.

The Select Resources dialog box opens.

Step 7 Use check boxes in the table to mark assets that you might use.

- Use options on the left to filter what the table shows.
- Use pagination controls under the table to control how many assets you see.
- Use the Search function above the table to locate particular assets quickly.

Step 8 Click **OK** to populate your campaign with the assets that you marked.

Step 9 Stop. You have completed this procedure.

Run a Report

Procedure

Step 1 Click **Reports** on the Home page.

Step 2 Click **Reports**.

Step 3 Choose reporting criteria.

- Report Type options are **Campaign**, **DMP**, or **DMP Group**.
- Reporting scope options are **Summary** and **Detailed**.
 - A summary report counts successes and failures.
 - A detailed report counts either successes *or* failures.
- You must specify the date range.

Step 4 Click **Run**.

Step 5 Stop. You have completed this procedure.

Export a Report

Before You Begin

- Complete the [“Run a Report” section on page 21-9](#).

Procedure

Step 1 Choose a format from the Export list.

- XML
- CSV
- Both

Step 2 Stop. You have completed this procedure.

View Previous Reports

Before You Begin

- Complete the [“Run a Report”](#) section on page 21-9.

Procedure

-
- Step 1** Click **View previous reports**.
- Step 2** Stop. You have completed this procedure.
-

Use the Proof of Play Dashboard

Procedure

-
- Step 1** Click **Reports** on the Home page.

- Step 2** Click **Dashboard**.
- Step 3** Stop. You have completed this procedure.
-

Reference

FAQs and Troubleshooting

- [FAQs](#), page 21-10
- [Troubleshooting](#), page 21-12

FAQs

- Q.** What might prevent proof-of-play features from working at all?

- A.** The fully qualified domain name (FQDN) for your DMM appliance must not exceed 30 characters.

`dmm.example.com` ← **VALID** for Proof of Play
 123456789012345678901234567890
`digitalmediamanager.example.com` ← **NOT VALID** for Proof of Play

Q. How do campaigns differ from presentations and playlists?

- A.** They are fundamentally different.
- Before playback can start for a presentation or playlist, you must target DMP groups and reserve timeslots for playback.
 - After a reserved timeslot has elapsed, you can verify whether playback occurred as scheduled for its programming.

Q. Are campaigns required in proof of play?

- A.** No. Campaigns are just one of three supported report types. You can also obtain proof of play reports per DMP or per DMP group.

Q. Can I associate one asset with multiple campaigns?

- A.** Yes.

Q. What triggers universal proof of play auditing for an asset?

- A.** There are two scenarios in which we validate each instance of playback for an asset.

Scenario	Details	Exceptions
Your campaigns already include all presentations and playlists that use the asset.	In this case, because you have not used the asset anywhere outside of a campaign, we verify its every instance of playback.	This universal verification becomes conditional when you use the asset anywhere outside a campaign.
You added the asset explicitly to a campaign.	In this case, we audit playback for this asset no matter how or when you play it, or in what context.	When you play it as <i>just one part</i> of a presentation or playlist that is not — <i>in its own right</i> —part of any campaign: <ul style="list-style-type: none"> • We do not verify playback for the playlist as a whole. • We do not verify playback for any other assets than the one that you audit explicitly.

Q. What triggers conditional proof of play auditing for an asset?

- A.** We might validate some instances of playback but not others. We cannot audit playback consistently for an asset whose instances of playback occur sometimes outside any campaign.

Q. What prevents proof of play auditing for an asset?

- A.** We cannot validate instances of playback for an asset whose every instance of playback occurs outside any campaign.

Q. What are the implications for emergency events?

A. See CSCtd23249

Troubleshooting

The log file location for proof of play features is: `/var/apache-tomcat/proofofplay-core.log`

Plan for and Manage Emergencies

Revised: May 4, 2015
OL-15762-05

Warning

Severe conditions that disrupt equipment during and after an emergency might prevent messages from playing on your digital signs.

- [Concepts, page 22-1](#)
- [Procedures, page 22-2](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will use Cisco Digital Signs for public safety messaging.

Concepts

- [Overview, page 22-1](#)

Overview

When emergencies of any kind affect sites where you have digital signs, you can use them to alert your viewers, warn them about dangers that might affect them, and direct them to safety. Or you can provide other kinds of information to them as you see fit. Until you stop playing emergency messages, they override all events that were scheduled to run automatically.

It is important to remember that emergency message insertions in your schedule will override *only* the events that are scheduled to run automatically. Furthermore, such insertions will override these events on *only* the DMPs that the emergency message insertion affected. All other DMPs in your network will abide by their schedule, without disruption.

Note

Consider very carefully which DMM users should have permission to work with your Channels and manage your DMP groups. Although all of the future scheduling features are suspended (for affected DMPs only) while an emergency is in progress, none of the Run Task features or other DMP Manager features are suspended. Therefore, it is possible for a careless user or malicious user with sufficient permissions to start another event manually on the DMPs where an emergency message should play.

Tip

Does your organization prefer that one or more screen zones show assets that are centrally editable in real time?

If so, you can stage the editable assets remotely on one of your external deployment servers instead of staging them locally on your DMPs. Then, the people in your organization who are entrusted to edit these assets can do so in real time.

However, our factory-default security policy on DMPs will prevent this unless you explicitly allow it in DMPDM. To allow it, you must log in to DMPDM 5.4 and disable its Web Security option.

After an emergency has stopped and normal scheduling has resumed on a DMP group and its children, any playlist or presentation that was scheduled for playback at that time will start from the beginning.

Procedures

- [Create Deployment Packages for Emergencies](#), page 22-2
- [Provision Emergency Assets to DMP Local Storage](#), page 22-4
- [Start Playback of an Emergency Message](#), page 22-5
- [Stop Playback of an Emergency Message](#), page 22-6

Create Deployment Packages for Emergencies

Before You Begin

- Populate the playlist or design the presentation whose assets you will transfer to your DMPs.

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Choose **Digital Media Players > Advanced Tasks**.

Step 3 Click **File Transfer to DMP or Server** in the Application Types list.

File Transfer to DMP or server

Step 4 Click **Add New Application** above the Applications table.

+ Add New Application

Step 5 Define behaviors for, and save, the file transfer task.

- Enter a specific name, such as “Fire” or “Flash Flood,” for the type of emergency.

You might want to use a less specific name, such as “Emergencies,” if this task will transfer the assets for multiple presentations or playlists, or if your organization uses one playlist or presentation for emergencies of all kinds.

- b. Choose **FTP** or **HTTP** from the DMP Publishing Protocol list.
 - c. Check the **Emergency/Alarm** check box.
 - d. Do one of the following.
 - *Are the assets part of a saved presentation?* If so, click **Presentations** in the Applications list.
- OR**
- *Are the assets part of a saved playlist?* If so, click **Playlists**.

The page is refreshed.

Step 6 Click the presentation or playlist (in the Available Applications list) whose assets should be transferred.

Step 7 Click  **Select Applications**.

AND

(Optional) Repeat as needed to transfer the assets for multiple playlists and presentations.

Step 8 Click **Submit**.

The task is now saved and available for deployments.

Note **Even though you created and saved a file transfer task, you have not used it yet.** Your DMPs will not have local copies of the emergency assets until after you run this task successfully.

Step 9 Provision the emergency assets to your DMPs.

Step 10 Stop. You have completed this procedure.

Related Topics

- [Provision Emergency Assets to DMP Local Storage, page 22-4](#)

Provision Emergency Assets to DMP Local Storage

Before You Begin

- Create and save deployable messages for playback during emergencies.

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Click **DMP Manager**.

Step 3 Click the group (in the DMP Groups list) that should receive these assets.

Step 4 Click **Run Task**.

The Run Task dialog box opens.

- Use options in the top pane to add DMPs to, or remove them from, your emergency deployment.
- Use options in the Select Task pane to filter which advanced tasks the table shows.
- Use pagination controls under the table to control how many advanced tasks you see.
- Use the Search function above the table to locate particular tasks quickly.

Step 5 Click to highlight the best system tasks for the type of emergency.

Step 6 Click **OK**.

The Run Task dialog box closes and a message tells you that your selected task was deployed.

- DMM transfers assets to your DMPs.
- DMM creates as many Go-to URL entries as the number of presentations and playlists that are part of the deployment.
- DMM applies the prefix “Alarm” to each of these Go-to URL entries.

Step 7 Stop. You have completed this procedure.

Related Topics

- [Start Playback of an Emergency Message, page 22-5](#)
- [Stop Playback of an Emergency Message, page 22-6](#)

Start Playback of an Emergency Message

Before You Begin

- Create and save deployable messages for playback during emergencies.
- Provision assets for the emergency message to DMP local storage or a network server.

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Click **Emergencies**.

Step 3 Click **Start Emergency**.

Step 4 From the Select Emergency list, choose the playlist or presentation that your DMPs should play during the type of emergency that is now in progress.

Entries that you see in the Select Emergency list are derived from file transfer tasks that you saved after checking the Emergency/Alarm check box.

Note You cannot add the “ALARM” prefix manually to the name of a (Go to) URL task to make the task appear in the Select Emergency list. Nor can you delete the “ALARM” prefix manually from the name of a (Go to) URL task to exclude the task from the Select Emergency list.

Step 5 Click to select at least one group in the Select DMP Group tree.

Tip You can select more than one group at a time. Depending on which operating system you use, hold down either the Control key (sometimes labeled “Ctrl”) or the Command key (sometimes labeled “⌘”) while you click any subsequent groups after the first.

When you choose a group that has child groups, the child groups and their member DMPs are also selected automatically.

Step 6 Click **Start**.

Step 7 Do one of the following.

- Click **OK** to confirm your selections and start playback immediately.

OR

- Click **Cancel** to discard your selections without playing the assets for any emergency.

**Warning**

Severe conditions that disrupt equipment during and after an emergency might prevent messages from playing on your digital signs.

**Tip**

You can submit an emergency to a DMP group while it is showing a playlist or presentation that describes some other emergency. There is no need to explicitly stop playback of the current emergency message before you start another one.

Step 8 Stop. You have completed this procedure.

Related Topics

- [Stop Playback of an Emergency Message, page 22-6](#)

Stop Playback of an Emergency Message

Before You Begin

- Start playback of an emergency message.

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Click **Emergencies**.

Step 3 Click **Stop Emergency**.

Step 4 Expand the Select DMP Group tree. Then, click a DMP group that is colored red.

Step 5 Click **Stop**.

When you choose a DMP group that has child groups, the child groups and their member DMPs are also selected automatically.

Step 6 Do one of the following.

- Click **OK** to stop playback of your emergency message. This action restores normal scheduling for the DMP group (and children) that you chose.

OR

- Click **Cancel** to discard your selections without stopping the emergency, click **Cancel**.

Step 7 Stop. You have completed this procedure.

- [Centralized Administration, page 23-2](#)
- [On-Premises Operation, page 23-3](#)
- [Workflow, page 23-4](#)

Overview

Features of *Cisco Cast* help your organization to deliver video-on-demand and live broadcast TV channels over IP networks to presentation systems that you connect to DMPs.

These DMPs might be in your conference rooms, public venues, executive offices, or other settings.

Restrictions

- [Feature License Restrictions, page 23-2](#)
- [User Permissions Restrictions, page 23-2](#)

User Permissions Restrictions

Note

Features of Cisco Cast are hidden from you until your user role assignment is **APPLICATION MANAGER** and you have explicit **WRITE** permissions (CSCtr05337).

Feature License Restrictions

Activation

See the “Understand Licenses” section in Part 1, Chapter 3, “Licenses.”

Centralized Administration

Cisco Cast includes powerful features for administrators.

- Customize on-screen menus with a logo and a skin.
- Configure video channel assignments.
- Specify what channels and programs should be available to the DMP displays where your organization will deploy *Cisco Cast*, and when they should be available.

You can make programming available that suits your purpose at a particular location, for a particular audience, at a particular time of day.

Live news and financial information	Sales and marketing messages	Educational or training content for classrooms
Corporate communications	Entertainment	<i>Any other</i> programming that suits your purpose.

Hospitality and healthcare providers might even use *Cisco Cast* in support of in-room IPTV.

2. **Deploy DMPs and presentation systems** to sites where you will show IPTV programming.
3. *When your IPTV programming will include live TV.*
 - **Negotiate with a cable or satellite TV service** in your region for the right to redistribute their package of TV channel signals, in whole or in part.
 - **Configure one encoder apiece for each TV channel signal that you will stream in real time.**
 - Use a Scientific Atlanta 9032SD encoder for standard definition signals.
 - Use a Scientific Atlanta 9050HD encoder for high definition signals.
4. Use Skin Customization options to **enable or disable the electronic program guide (EPG)** for *Cisco Cast*.
 - a. When you will use an EPG, **choose a population method** for each channel.
 - b. When you will use an EPG and populate its channel descriptions from an EPG data subscription, **define the subscription settings**.
 - c. When your DMM appliance does not have direct Internet access and should use a proxy server to obtain EPG data from your data service provider, **configure a SOCKS proxy** for *Cisco Cast*.

Procedures

- [Start Cisco Cast, page 23-4](#)

Start Cisco Cast

Procedure

- Step 1** Point your browser at your DMM appliance.
- When you use **HTTP**, be sure to specify port **8080**.
 - When you use **HTTPS**, be sure to specify port **8443**.
 - Be sure to use the fully qualified appliance DNS name and not merely its IP address.

For example, `https://dmm.example.com:8443`

- Step 2** Click **Content Management** on the Home page.

- Step 3** Click **Cast**.
The TV Channels tab is preselected by default.
- Step 4** Stop. You have completed this procedure.
-

Redistribute Live TV

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 24-1](#)
- [Procedures, page 24-2](#)
- [Reference, page 24-8](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will use Cisco Cast to deliver live television feeds to presentation systems at high-bandwidth sites.
-

Concepts

- [Guidelines, page 24-1](#)
- [Restrictions, page 24-2](#)

Guidelines

- [Site Assessment for Live Video Programming, page 24-1](#)

Site Assessment for Live Video Programming

Organizations that use *Cisco Cast* tend to show live video programming at their sites with the greatest bandwidth capacity, such as their main site. Live video programming is not suitable for remote branch offices with low bandwidth capacity.

When you plan how many TV channels to configure, consider the actual bandwidth capacity in your WAN and at each remote site where you will use *Cisco Cast*. The typical rate of bandwidth consumption will be in the range from 2 Mbps to 16 Mbps per channel, per site.

Restrictions

- [User Permissions Restrictions, page 24-2](#)
- [Channel Count Restrictions, page 24-2](#)
- [Codec Restrictions, page 24-2](#)

User Permissions Restrictions

Note

Features of Cisco Cast are hidden from you until you are logged in as a user with content permissions.

Channel Count Restrictions

Features of this *Cisco Cast* release support 99 or fewer channels of live broadcast programming and VoD programming, combined.

Codec Restrictions

Any digital encoders that you use for live broadcast channels must adhere to the MPEG2-TS standard for streaming and must support at least one of these codecs:

- MPEG1
- MPEG2
- MPEG4/h.264 (supported on DMP 4400G endpoints only)

For this reason, we recommend that you use a Scientific Atlanta 9032SD encoder or 9050HD encoder to encode the video streams that your DMPs use for *Cisco Cast* channels.

Procedures

- [Add Channels, page 24-3](#)
- [Edit Channels, page 24-4](#)
- [Reassign Channel Numbers, page 24-5](#)
- [Delete Channels, page 24-6](#)
- [List Only the Defined \(Active\) or Undefined \(Inactive\) TV Channels, page 24-7](#)

Add Channels

You can define many attributes for a new TV channel in your lineup. Permitted channel assignments range from 1 to 99.

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click the **TV Channels** tab.

Step 4 Look in the Channel Number column for the channel to be defined. Then, in the corresponding row, click **Set Up Channel** in the Actions column.

The Add a New Channel dialog box opens.

Step 5 Choose the options or enter the values that meet your requirements.

Step 6 Click **Add a Channel** to save your entries.

OR

Click **Cancel** to discard your entries.

Step 7 Stop. You have completed this procedure.

Related Topics

- [Elements to Manage TV Channels, page 24-8](#)

Edit Channels

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click the **TV Channels** tab.

Step 4 Notice where the Channel Number column intersects a row that describes the targeted channel

Step 5 Click the arrow (▼) in that row's Actions column

The Actions menu expands so that you can see and choose among its options.

Step 6 Click **Edit Channel Settings**.

The Edit an Existing Channel dialog box opens.

Step 7 Choose the options or enter the values that meet your requirements.

Step 8 Click **Update Channel** to save your entries.

OR

Click **Cancel** to discard your entries.

Step 9 Stop. You have completed this procedure.

Related Topics

- [Elements to Manage TV Channels, page 24-8](#)

Reassign Channel Numbers

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click the **TV Channels** tab.

Step 4 Look in the Channel Number column for the channel to be edited.

Step 5 Do one of the following.

- *Would you like to reassign this channel to the nearest unused number?*
 - When you will use the nearest number**
 - a. Click the up (↑) arrow to associate this channel definition with whichever *lower-numbered* channel is nearest among the undefined channels.

(The arrow points up because lower rows are reserved for lower-numbered channels.)

OR

Click the down (↓) arrow to associate this channel definition with whichever *higher-numbered* channel is nearest among the undefined channels.

(The arrow points down because higher rows are reserved for higher-numbered channels).

- b. Proceed to [Step 6](#).

- *Would you like to specify the number for this channel?*
 - When you will choose a specific number**
 - a. Notice where the Channel Number column intersects a row that describes the targeted channel.
 - b. Click the arrow (▼) in that row's Actions column.
The Actions menu expands so that you can see and choose among its options.
 - c. Click **Reassign to Any Unused Channel**.
 - d. Choose from the list in the Actions column which channel number to assign to the targeted channel.
 - e. Proceed to [Step 6](#).

Step 6 Stop. You have completed this procedure.

Related Topics

- [Elements to Manage TV Channels, page 24-8](#)

Delete Channels

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click the **TV Channels** tab.

Step 4 Look in the Channel Number column for the channel to be deleted. Then, in the corresponding row, click the arrow (▼) in the Actions column.

The Actions menu expands so that you can see and choose among its options.

Step 5 Click **Delete This Channel**.

The Delete Confirmation dialog box opens.

Step 6 Click **Yes** to delete the channel.

OR

Click **No** to retain the channel.

Step 7 Stop. You have completed this procedure.

Related Topics

- [Elements to Manage TV Channels, page 24-8](#)

List Only the Defined (Active) or Undefined (Inactive) TV Channels

You can filter the TV Channels table so that it describes defined channels only or undefined channels only. By default, the table describes all channels.

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click the **TV Channels** tab.

Step 4 Choose an option from the Channel View list above the column headings.

- All Channels (default)—Shows the combination of all defined and undefined channels.
- Active Channels—Shows only the defined channels.
- Inactive Channels—Shows only the channels that are not yet defined.

Step 5 Stop. You have completed this procedure.

Elements to Manage TV Channels

Navigation Path

- *Content Management > Cast > TV Channels*

The TV Channels table describes the defined and undefined TV channels for your network and includes features that help you to manage these channels.

Table 24-1 *Elements of the TV Channels Table*

Element	Description
Channel View list	<p>Enables or disables a filtered view of which channels this table describes, based on which option you choose:</p> <ul style="list-style-type: none"> • All Channels—Shows the combination of all defined and undefined channels. • Active Channels—Shows only the defined channels. • Inactive Channels—Shows only the channels that are not yet defined.
Channel Number	<p>One numeral per row, in the range from 1 to 99, where any numeral can be the TV channel number that you associate with a particular multicast stream. The default behavior for this table is that it shows all 99 possible channel numbers, one per row.</p> <p>Your choice from the Channel View list might limit how many rows the table contains, and this can affect indirectly how many channel numbers you see.</p> <p>When you sort the table by clicking a column heading, channel numbers might be rearranged temporarily into an unrecognizable sequence. To sort channels back into the expected sequence if their sequence has become unrecognizable, click the Channel Number column heading.</p>
Channel Name	<p>Blank when the corresponding row describes an undefined TV channel. Otherwise, shows a value that you entered or an option that you chose from a list when you defined the channel. To understand these values, see Table 24-2 on page 24-10.</p>
Description	
Multicast Address: Port	
Call Letters for Channel	

Table 24-1 Elements of the TV Channels Table (continued)

Element	Description
Reassign to Nearest Unused Channel	<p>Two buttons, either of which can change the association between a channel definition and a channel number. The channel definition in the corresponding row becomes associated instead with the closest channel (of a higher number or a lower number, respectively) that is undefined. These buttons have no effect when every channel is already defined.</p> <p>The first row and last row of this table will only ever show one of these buttons apiece. These rows differ from all other rows in the table because you cannot use any channel number that is lower than the lowest supported channel number or higher than the highest supported channel number. The first row shows only ↓, while the last row shows only ↑.</p> <ul style="list-style-type: none"> • ↑—Associates the channel definition that the corresponding row describes with whichever <i>lower-numbered</i> channel is nearest among the undefined channels. The arrow points up because table rows above this row are reserved for lower-numbered channels. • ↓—Associates the channel definition that the corresponding row describes with whichever <i>higher-numbered</i> channel is nearest among the undefined channels. The arrow points down because table rows above this row are reserved for higher-numbered channels.
Actions	<p>One of these:</p> <ul style="list-style-type: none"> • Set Up Channel—Opens the dialog box where you can enter values and define attributes for a TV channel. This button is visible only in rows that describe undefined TV channels. • <input checked="" type="checkbox"/>—A list from which you can choose one of the following options. This list is visible only in rows that describe defined TV channels. <ul style="list-style-type: none"> – Edit Channel Settings—Opens the dialog box where you can edit the values and attributes of a channel that is already defined. – Reassign to Any Unused Channel—Associates the channel definition that the corresponding row describes with whichever channel is nearest among the undefined channels. The new channel number might be higher or lower than whichever channel number was in effect until you changed it. – Delete This Channel—Deletes all entries and attribute values from the definition of the channel that the corresponding row describes. The relevant channel number will not be associated with any defined channel unless or until you define a new channel for it or associate an existing channel with it.

Elements to Define Channel Settings

Navigation Path

- *Cast > TV Channels > Set Up Channel*
- *Cast > TV Channels >  > Edit Channel Settings*

Table 24-2 Elements for Channel Definition

Element	Description
Your Name for This Channel	A meaningful, brief, and unique description of the channel that the corresponding row describes, such as China Central Television, Univision, Al-Jazeera, BBC-1, Star Cricket, HBO, or CNN.
Address Type	The method (multicast or HTTP) that your DMPs will use to receive the video stream for this channel. Choose an option from the list to enter the correct kind of address. Your choice determines which other fields appear on this page. The options are: <ul style="list-style-type: none"> • Multicast Address—The routable IP address and UDP port for a streaming server, as described in the “Multicast Address: Port” row elsewhere in this table. • HTTP URL—The full HTTP URL for one video file of a supported type, as described in the “HTTP URL” row elsewhere in this table.
Multicast Address: Port	The IP address and port number of the streaming server from which your DMPs will receive the multicast stream for this channel. You must specify the port number. This field is visible only after you choose Multicast Address from the Address Type list. Later, if you choose any other option from the Address Type list, <i>Cisco Cast</i> will ignore the values in this field.
HTTP URL	The exact URL and path that points to one MPEG video file on an HTTP server. You must use HTTP as the protocol and the filename extension must be MPG. This field is visible only after you choose HTTP URL from the Address Type list.
Text to Show if Program Guide is Not Available	Text that describes this channel. The electronic program guide (EPG) shows this text when no other information is available. When the EPG uses this text, it does not describe individual programs for this channel.
EPG Provider	Associates or disassociates this channel with one EPG data source and specifies the nature of that source if you associate one with this channel. You can choose whether to use any data source. The options are similar to these: <ul style="list-style-type: none"> • TMS—Your EPG will use data from Tribune Media Services to describe this channel and its programs. • <XMLTV>—Your EPG will use data in the XMLTV format to describe this channel and its programs. • Upload CSV—Your EPG will use data from a CSV file to describe this channel and its programs. • None—Your EPG will use a brief, generic statement to describe this channel and its programs. <p>Note EPG data is not required for Cisco Cast to work. You can use options at <i>Cast > Skins Customization</i> to enable or disable the EPG. You are not required to subscribe to any EPG data service.</p>
CSV File (Browse)	The method to find and select a CSV file that you have stored locally and will upload to your DMM appliance.
Download the CSV Template	A downloadable template file in Microsoft Excel format that you can use to define the EPG attributes for programs on one channel. This link is visible only when you have chosen Upload CSV from the EPG Provider list.

Table 24-2 *Elements for Channel Definition (continued)*

Element	Description
Call Letters for Channel	<p>A list of call letters for TV channels that your EPG subscription includes. The list is variable according to your location in the United States, the package of channels that you receive from your cable or satellite TV provider, the nature of your contract with TMS, and possibly other factors. Your list might include some or all of these call letters, possibly among others:</p> <ul style="list-style-type: none"> • ABC—American Broadcasting Company • AZA—Azteca América • CBC—Canadian Broadcasting Corporation • CBS—CBS Broadcasting • CW—The CW Television Network • FOX—Fox Broadcasting Company • MNT—MyNetworkTV • NBC—National Broadcasting Company • PAX—ION Television • PBS—Public Broadcasting Service • SRC—SRC • TEL—Telemundo • TLF—TeleFutura • TQS—Télévision Quatre Saisons • TVA—Tele Vida Abundante • UNI—Univision <p>This list is visible only after you choose Tribune Media Services from the EPG Provider list.</p>

- [Guidelines, page 25-1](#)
- [Restrictions, page 25-2](#)

Overview

Categories help you to manage how VoDs are organized within the interactive menu system at sites where you deploy *Cisco Cast*.

Guidelines

- [Site Assessment for VoD Programming, page 25-1](#)

Site Assessment for VoD Programming

Remote branch offices are better suited to VoD programming than they are to live video programming. Common use cases for VoD programming include training and executive communications.

We recommend that you use a content delivery system to provision the assets for your VoD programming, particularly if your remote sites have low bandwidth capacity.

Restrictions

- [User Permissions Restrictions, page 25-2](#)
- [Channel Count Restrictions, page 25-2](#)

User Permissions Restrictions

**Note**

Features of Cisco Cast are hidden from you until you are logged in as a user with content permissions.

Channel Count Restrictions

Features of this *Cisco Cast* release support 99 or fewer channels of live broadcast programming and VoD programming, combined.

Workflow to Stage VoD Assets to DMP Local Storage

You can stage *Cisco Cast* VoD assets directly to a DMP, for local storage on its internal flash memory card (*usb_1*) or its external USB drive (*usb_2*). This technique conserves WAN bandwidth and avoids latency that might detract from the quality of your *Cisco Cast* VoD programming. It is useful also if you do not have any dedicated content delivery solution in place.

1. Create the DMP group whose member DMPs should store VoD assets.
2. Define the *Cisco Cast* channel lineup.
3. Customize the menu system.
4. Define VoD categories.
5. Add video assets to the media library.
6. Populate VoD categories with video assets from the media library.
7. Verify that the FTP service is enabled on target DMPs.
8. Create a DMS-CD deployment package for the electronic program guide (EPG).
9. Stage your EPG to DMPs that should serve VoDs from local storage.
10. Transfer your customized menu system, channels list, VoD playlist, and video assets to DMPs.
11. Monitor progress and the current status of your deployment.

Procedures

The Delete Confirmation dialog box opens.

Step 6 Click **Yes** to delete the category.

OR

Click **No** to retain it.

Step 7 Stop. You have completed this procedure.

Related Topics

- [Elements to Manage VoD Categories, page 25-9](#)

Map a Video to a VoD Category

Each video that you map to a category will be listed as a VoD in the interactive menu system at sites where you deploy *Cisco Cast*.

Before You Begin

- Add the video to your shared Media Library for digital signage and *Cisco Cast*.
- Create the category. See [Add a New VoD Category, page 25-3](#).

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click **Video on Demand**.

The Categories area is on the left, and after you click a category, a table on the right describes the videos that are mapped to that category.

Step 4 In the Categories area, click the name of the category to which you will add a video.

Step 5 In the area that lists videos, click **Map Videos to Category**.

The VoD Mapping dialog box opens. A tree on the left shows the hierarchy of categories for assets in your shared Media Library and, after you click a category, an untitled table on the right describes each asset in that category.

Step 6 Click the Media Library category that contains the video that you want to use as a VoD.

The videos in this category are described in the untitled table on the right.

Step 7 Click the name of the video, and then drag and drop it to the area below.

Tip To choose more than one video, hold down the **Shift** key while you click each name.

Step 8 Click **Submit Mapping** to add the video.

The category that you chose is now part of the categories tree on the Video on Demand page. Later, whenever you choose this category in the tree, an untitled table on the left side of the page will describe each video that you added to it as a VoD.

OR

Click **Cancel** to discard your entries.

Step 9 Stop. You have completed this procedure.

Organize Videos in VoD Categories

When you organize the videos in a VoD category, you set the order in which *Cisco Cast* plays the videos at your deployment sites.

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click **Video on Demand**.

The Categories area is on the left, and after you click a category, a table on the right describes the videos that are mapped to that category.

Step 4 In the Categories area, click the name of the category that includes the videos to be organized.

The videos in this category are described in the untitled table on the right.

Step 5 Click the name of the video; then, drag and drop it to its new location in the list.

Videos that are higher in the list will be shown before videos that are lower in the list.

Step 6 Stop. You have completed this procedure.

Remove a Video from a Category

When you remove a video from a category on the Video on Demand page, you remove it also from the interactive menu system at sites where you deploy *Cisco Cast*.

Procedure

Step 1 Click the **Video on Demand** tab.

Step 2 In the area that lists videos, click **Map Videos to Category**.

The VoD Mapping dialog box opens.

Step 3 Click the **Remove** link that corresponds to a video that should be removed.

Step 4 Stop. You have completed this procedure.

Stage an EPG to DMP Local Storage

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Choose **Digital Media Players > Advanced Tasks**.

Step 3 Click **Deployment Package** in the Application Types list.

Deployment Package

Step 4 Click **Add New Application** above the Applications table.

[+ Add New Application](#)

Step 5 Click **Cast** in the Applications list.

Cast

Step 6 Enter **Deploy-Local-Cast** in the Name field.

Step 7 Choose an option from the Mount Point list.

- *Should “usb_1”¹ be the local mount point?* **When you will use usb_1**
 - a. Choose **Flash Storage (default)**.
- *Should “usb_2”² be the local mount point?* **When you will use usb_2**
 - a. Choose **USB**.

1. “usb_1” is the CF, SD, or SSD memory card inside your DMP.
2. “usb_2” is an external hard drive or flash drive that you have attached to your DMP.

Step 8 Click the name of your *Cisco Cast* program guide. Then, click **Select Application**.

Step 9 Click **Submit**.

Step 10 Stop. You have completed this procedure.

Electronic Program Guide

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 26-1](#)
- [Procedures, page 26-5](#)
- [Reference, page 26-8](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You will configure and populate the channel and program listings for IPTV services to your presentation systems.
-

Concepts

- [Overview, page 26-1](#)
- [Guidelines, page 26-2](#)
- [Restrictions, page 26-2](#)
- [Understand EPG Data Formats, page 26-2](#)
- [Understand Methods to Describe EPG Channels, page 26-4](#)

Overview

Electronic program guide (EPG) data is not required for *Cisco Cast* to work. You can enable or disable the EPG for Cisco DMS. You are not required to subscribe to any EPG data service.

Tip

To have and use an EPG without entering into a subscription contract, you can create and upload a CSV file that contains program descriptions that you have entered.

Guidelines

**Note**

When you negotiate a subscription contract to receive EPG data in any format, tell your data provider that you will use its EPG data with Cisco Cast. Knowing this, your provider can ensure that your license grants you sufficient permissions so that you are not in violation of its terms.

Restrictions

- [User Permissions Restrictions, page 26-2](#)

User Permissions Restrictions

**Note**

Features of Cisco Cast are hidden from you until you are logged in as a user with content permissions.

Understand EPG Data Formats

We support the XMLTV and TMS data formats for subscriptions to electronic program guide (EPG) data.

- [XMLTV, page 26-2](#)
- [Tribune Media Services, page 26-3](#)

XMLTV

XMLTV is an emerging, open-source format for EPG data, based in part on RFC 2838 and maintained by the XMLTV Project. An EPG data file that complies with this format contains structured records that describe the attributes of episodes and channels individually.

Cisco DMS supports EPG data subscriptions that retrieve a single GZIP-compressed XMLTV file from an ftp server. Many subscription providers compile and deliver EPG data in this way, including these providers based in the United States:

- FYI Television, Inc. (<http://www.fyitelevision.com/>)
1901 N State Hwy 360 3rd Floor
Grand Prairie, TX 75050
- Schedules Direct (<http://www.schedulesdirect.org/>)
8613 42nd Ave S
Seattle, WA 98118

Tribune Media Services

Tribune Media Services (TMS; <http://tms.tribune.com/products/k-epgs.html>) sells subscriptions to EPG data in several proprietary data formats that it controls. Cisco DMS supports *only one* of these data formats. Specifically:

- The name of the supported product is *TV Schedules, United States*.
- The scope of the supported product is *Fourteen (14) rolling days*.
- Subscriptions that use this format are available only within the United States.

Other EPG subscription products from TMS use data formats that we do not support. If you are already a TMS customer, check whether your preexisting subscription contract already authorizes you to obtain and use EPG data in the supported format.

Note

- **To learn more about the supported TMS data format or to negotiate the commercial contract for a subscription, contact Amy Mann, the director of new media sales at Tribune Media Services.** Her toll-free telephone number is 800 833-9581, ext. 2333, and her email address is aamann@tribune.com. To ensure that your contract includes sufficient permissions, be sure to say that you intend to use TMS data for Cisco Cast.
- It might be necessary to adjust security settings in your network so that you can receive EPG data from TMS. The ftp server on your DMM appliance must be able to reach the TMS ftp server.
- Data from TMS is proprietary, copyrighted, and licensed. Although TMS compiles this licensed data in good faith, neither Cisco nor TMS makes any express or implied warranties regarding the data or its merchantability or fitness for any purpose.

Understand Methods to Describe EPG Channels

Generic Channel Descriptions

You can disassociate a channel from all EPG data sources.

In this case, the only information that an EPG will show about the channel is exactly the text that you enter in the Text to Show if Program Guide is Not Available field. This brief message, which you enter one time, describes the channel in a broad and general sense, and straddles all time slots.

Channel Descriptions from a CSV File

You can enter descriptions into a CSV file for each program that a channel will show.

With this method, you can have and use an EPG without entering into a subscription contract. To populate an EPG completely, you must create and upload a separate CSV file for every channel that your EPG should include. EPG provider-related prerequisites do not apply if your channel will use programming data from a CSV file.

There are strict requirements for what constitutes a valid CSV file. It must use syntax and formatting that are perfectly consistent with output from a downloadable Microsoft Excel format template that we provide for your use. We strongly recommend that you derive your CSV files from the free template. Click **Download the CSV Template** to obtain a copy of the template, and start using it to define the EPG attributes for programs on one channel. You can define the attributes for only a few programs or for as many as 14 days of programs.

Populate fields in the template as follows, where each table row contains the attributes for one program in the EPG for the corresponding TV channel.

- **Date**—The date and time of day when one described program will start. Start times for programs in your CSV file must use the format **MM/DD/YY HH:mm**.
- **Duration**—The total running time for the described program. Duration values for programs must use numerals, which indicate the total duration in minutes.
- **Title**—The title that the program guide should show for the described program. Program titles are limited to a maximum of 23 characters. When the text to be displayed in a program title should show any visible quotation marks, you must enter exactly **"** for each quotation mark that should be visible.
- **Description**—The actual description that the program guide should show for the program. Descriptions are limited to a maximum of 50 characters. When the text to be displayed in your program guide should show any visible quotation marks, you must enter exactly **"** for each quotation mark that should be visible.

Define the attributes for programs on one channel, and then save and upload your CSV file.

Channel Descriptions from a Data Subscription

You can negotiate with a vendor of programming data to establish a paid subscription, by which you will gain automatic access to current program schedules and descriptions for multiple channels. Before your channel can use any EPG data from a subscription provider, you must enter your subscription details and synchronize data on the EPG Providers tab. Then, you must configure the channel on the TV Channels tab. The supported data formats are:

- **TMS**—Your EPG will use Tribune Media Services data to describe the channel and its programs.
- **<XMLTV>**—Your EPG will use data in the XMLTV format to describe the channel and its programs. The provider name here is not necessarily “XMLTV.” Instead, it matches exactly what you entered for the provider name when you configured your subscription settings, assuming that you have an XMLTV data subscription.

Add or Edit Subscriptions to Data from an EPG Provider

You use elements on the EPG Providers page to define the settings for your EPG data subscriptions, view a summary of all subscriptions that you have defined and, optionally, choose whether to edit, delete, or synchronize a subscription.

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click the **EPG Providers** tab.

Step 4 Do one of the following.

- Click **Add an EPG Provider** to define the settings for a new subscription.
- Edit a subscription that you defined previously.
 - a. In the EPG Provider Name column, identify the subscription to be edited. Then, click the corresponding arrow (▼) in the Actions column.
The Actions menu expands so that you can see and choose among its options.
 - b. Click **Edit**.

A dialog box opens, in which you can define or edit the attributes for this subscription.

Step 5 Choose the options or enter the values that meet your requirements, as described in [Table 26-1 on page 26-8](#).

Step 6 Do one of the following.

- Click the button that saves your entries.
 - Click **Add Provider** if you are defining a new subscription.

OR

- Click **Update Provider** if you are editing a subscription that you defined previously.
- Click **Cancel** to discard your entries.

Step 7 Stop. You have completed this procedure.

What to Do Next

- *Would you like to associate a subscription with a channel?*
Proceed to the [“Add Channels” section on page 24-3.](#)

Delete Settings That Define a Subscription

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click the **EPG Providers** tab.

Step 4 In the EPG Provider Name column, identify the subscription to be deleted; then, click the corresponding arrow (▼) in the Actions column.

The Actions menu expands so that you can see and choose among its options.

Step 5 Click **Delete**.

Step 6 Click **Yes** to delete the subscription.

OR

Click **No** to retain the subscription.

Step 7 Stop. You have completed this procedure.

Synchronize EPG Channel Schedules and Program Descriptions

Procedure

Step 1 Click **Content Management** on the Home page.

Step 2 Click **Cast**.

Step 3 Click the **EPG Providers** tab.

Step 4 Examine entries in the EPG Provider Name column.

- a. Identify the subscription whose TV channel schedules and program descriptions should be synchronized to your EPG.
- b. Click the corresponding arrow (▼) in the Actions column.

The Actions menu expands so that you can see and choose among its options.

Step 5 Click **Synchronize**.

The Performing EPG Synchronization dialog box opens. It shows a progress indicator (⚙️) that spins until synchronization has finished. This dialog box closes itself automatically upon completion, unless you dismiss it manually before that.

Step 6 (Optional) *Would you like to dismiss the dialog box?* If so, click **Run in Background**.

Synchronization finishes in the background so that you can continue your work.

Step 7 Stop. You have completed this procedure.

Elements to Define EPG Provider Settings

Table 26-1 Elements for Defining EPG Subscription Settings

Element	Description
Provider Name	The name that you use to distinguish this provider from all other providers.
Data Format	The file format for your subscription data, after you download and decompress it. One of these: <ul style="list-style-type: none"> • Tribune Media Services - TV Schedules • XMLTV
Host or IP Address	The routable IP address or DMS-resolvable hostname of the ftp server where you obtain EPG data from your subscription provider.
Username	Your username to log in to the specified ftp server.
Password	The password to authenticate your username to the specified ftp server.
Remote Path	The ftp server subdirectory path where EPG data files are stored for your subscription. Enter the full pathname, including the actual filename for the .gz (gzipped) archive, if the data format is XMLTV. For example, you might enter <i>pub/xmltv.xml.gz</i> .
Proxy Settings (Optional)	
Proxy Hostname	The routable IP address or DNS-resolvable hostname and port number of the proxy server that your DMM appliance should use if it does not have direct Internet access.
Proxy Port	<p>Note Do not enter a colon before the port number.</p> <p>Note Do not configure proxy settings for DMM appliances that have direct access to the Internet.</p>
Automatic Synchronization Time	
Hour	The exact time of day when your DMM appliance should synchronize its program guides for <i>Cisco Cast</i> with the latest available EPG data from your service provider.
Minute	

FAQs and Troubleshooting

- [Troubleshoot EPG Highlighting, page 26-9](#)

Troubleshoot EPG Highlighting

A DMP 4310G does not always render yellow highlighting correctly in the electronic program guide (EPG) listings for Cisco Cast.

As you navigate through EPG program listings, yellow highlights on screen should always indicate which listing is the current focus of your navigation. However, this highlighting can become offset from your true focus. Before the EPG reaches this state, all of the following must be true simultaneously.

- A DMP 4310G controls the digital sign that shows your EPG.
- Your EPG navigation focus reaches to the outermost edge of your navigable EPG—whether top, bottom, left, or right.
- You use an arrow button or other control that is not valid for your current focus.
- The reason this control is not valid in this context is that it would move focus beyond the outermost edge.

To recover from this state, press any valid button. Alternatively, double-press the same arrow button or other control that you previously invoked in error. The yellow highlight is then restored to your true focus.

Deploy Menu System Customizations to Your DMPs

Procedure

Step 1 Click **Network and Endpoints** on the Home page.

Step 2 Choose **Digital Media Players > DMP Manager**.

Step 3 Use check boxes in the table to mark DMPs that should use this menu skin.

Step 4 Click **Run Task**.

The Run Task dialog box opens.

- Use options in the top pane to add DMPs to, or remove them from, your menu skin deployment.
- Use the Search function above the table to locate your **Cast-PG** task in particular.

Step 5 Toggle open the **Advanced Tasks** drawer in the Select Task area.

Step 6 Click to highlight your **Cast-PG** task.

Step 7 Click **OK**.

The Run Task dialog box closes and a message tells you that your selected task was deployed.

- DMM transfers assets to your DMPs.
- DMM creates as many Go-to URL entries as the number of presentations and playlists that are part of the deployment.

Step 8 Stop. You have completed this procedure.

Emulate the DMP Remote Control for Use with Cisco Cast

Revised: May 4, 2015
OL-15762-05

- [Concepts, page 28-1](#)
- [Procedures, page 28-4](#)

Audience

We prepared this material with specific expectations of you.

- ✓ You want to emulate the DMP remote control on mobile phones or Cisco IP phones.

Note

We do not support remote control emulation on a DMP 4310G.

Concepts

- [Overview, page 28-1](#)
- [Restrictions, page 28-2](#)
- [Workflow to Provision Emulator Service for IP Phones, page 28-3](#)

Overview

Topics in this section describe a software-based emulator that you can use in place of, or in addition to, the remote control unit for a DMP.

Note

- **Although Cisco sells a physical remote control device for use with DMPs that deliver Cisco Cast programming to their attached displays, the remote control unit is an optional accessory for a DMP.**
 - To learn about the remote control unit, see its documentation on Cisco.com.
 - The emulated remote control supports changing channels for Cisco Cast, navigating in the Cisco Cast menu system, and adjusting audio volume settings for a DMP.
-

Restrictions

- [Audio Muting Restrictions, page 28-2](#)
- [Channel-Changing Restrictions, page 28-2](#)
- [Workflow to Provision Emulator Service for IP Phones, page 28-3](#)
- [DMP Model Restrictions, page 28-2](#)

Audio Muting Restrictions

When your DMP 4400G connects from its SPDIF audio interface to an external display or receiver, your DMP remote control cannot mute the audio. (CSCty77943; CSCth12215)

Channel-Changing Restrictions

- When you use a handheld or emulated remote control to operate the Cisco Cast EPG for a DMP 4400G, avoid changing channels more than once in 3 seconds. Otherwise, the DMP must queue your repeated commands to a buffer and then call them sequentially for processing. This operation can cause a visible lag, during which your display goes black for a split-second (CSCtn04167).
- Remote control keymapping falls out of sync when you change a button's "keypress" MIB value more than 208 times without restarting your DMP (CSCsr61876). Until you have restarted your DMP, any subsequent attempts to change the "keypress" MIB of the affected button will not have any effect.

DMP Model Restrictions

The DMP 4310G does not support remote control emulation. This is primarily due to a hardware limitation within the DMP 4310G which cannot process/convert the commands sent by a hand-held remote into keypresses.

Solution Switch to the DMP 4400G or DMP 4305G devices which both support remote control emulation.

User Permissions Restrictions

**Note**

Features of Cisco Cast are hidden from you until your user role assignment is **APPLICATION MANAGER** and you have explicit **WRITE** permissions (CSCtr05337).

Workflow to Provision Emulator Service for IP Phones

You can provision a service from Cisco Unified Communications Manager that emulates the handheld DMP remote control unit on Cisco IP phones. This workflow assumes that you are experienced as an administrator in Cisco Unified Communications Manager and that you use it already to manage a network of IP phones.

Tip Skip this workflow if you will not use any IP phones to emulate the remote control.

1. Complete these tasks in CUCM.

- a. [Activate Services, page 28-4](#)
- b. [Start Services, page 28-5](#)
- c. [Configure URL Parameters, page 28-5](#)
- d. [Enable IP Phone Autoregistration, page 28-6](#)
- e. [Define IP Phone Service Attributes, page 28-6](#)
- f. [Expose the Service to IP Phones, page 28-7](#)

Note Emulator-related configuration changes that you make on your Cisco Unified Communications Manager server do not become useful until after you also configure Cisco Cast to serve the emulator, and configure at least one IP phone to run the emulator.

2. Complete these tasks in Cisco Cast.

- [Configure Emulator Settings in Cast, page 28-8](#)

3. Complete these tasks on phones, as needed.

- a. [Configure an IP Phone to Emulate the Remote Control, page 28-10](#)
- b. [Start the Emulator on an IP Phone, page 28-10](#)
- c. [Start the Emulator on a Mobile Phone, page 28-11](#)
- d. [Use the Emulator on an IP Phone or a Mobile Phone, page 28-12](#)

Note

This workflow is based on Cisco Unified Communications Manager release 6.1. When you use any other release, the workflow might differ slightly in your network. We recommend that you read on Cisco.com the particular revisions of these guides that apply to your network.

- [Enable IP Phone Autoregistration](#), page 28-6

Configure Emulator Settings in Cast

**Note**

Options on the Remote Control page might sometimes be dimmed and not available to you.

- Click **Save** to activate dimmed options if this occurs during Step 1.
- This occurs during Step 2 only when your choice is None. Choose either **All DMPs** or **Selected DMPs** to reactivate options that your choice dimmed.

Before You Begin

- Complete the workflow in Cisco Unified Communications Manager to provision the emulator to your IP phones.

Procedure

Step 1 Click **Content Management**.

Step 2 Choose **Cast > Remote Control**.

Step 3 Choose an option from the Display Security PIN on screen list, to set how many of your DMPs should support the emulator.

- All DMPs
- Selected DMPs
- None

**Note**

We do not support remote control emulation on a DMP 4310G.

Step 4 (As Needed) *Did you choose Selected DMPs in Step 3?*

If so, click **Display DMP Selections** to refine your list of which DMPs should support the emulator.

- Use check boxes to select and deselect DMPs.
- Click **Save Selection Changes** to save your work.
- Click **Close** to dismiss the dialog box.

- Step 5** Choose an option from the Security PIN behavior list.
- Although *Cisco Cast* randomly generates all of its emulator PINs, the fixed and dynamic types differ in their persistence.
- **Fixed**—These PINs persist until the PIN management type is changed.
 - **Dynamic**—These PINs expire and are then regenerated after an update interval that you define.
- No two DMPs in your network will use the same PIN at any one time.

- Step 6** (As Needed) *Did you choose the dynamic PIN type in Step 5?*

If so, enter at least one digit in the Security PIN update interval (minutes) field.

The interval cannot be any less than 2 min. When you do not enter any value, *Cisco Cast* uses its factory-default interval of 5 min.

- Step 7** Enter a shortened URL in the Access URL field for a page that will redirect ultimately to **http://<DMM_hostname>:8080/etv-remotecontrol-webapp/app/index.htm**.

Note The shortened URL must not be more than 24 characters long.

- Step 8** Click **Save**.

OR

Click **Cancel** to discard your selections and start over again.

- Step 9** Deploy the new emulator settings to your DMPs.
- a. Click **Content Management** on the Home page.
 - b. Choose **Digital Media Players > DMP Manager**.
 - c. Choose the DMP or DMP group that should use these settings.
 - d. Choose **Cast** from the Actions list. Then, click **Go**.

- Step 10** Stop. You have completed this procedure.
-

Configure an IP Phone to Emulate the Remote Control

You can configure a Cisco IP Phone from the 7960 series or the 7970 series to emulate the remote control for *Cisco Cast*, and then use keys drawn on its touchscreen to choose options from the electronic program guide, change channels, and adjust audio volume levels.

Before You Begin

Complete the workflow in Cisco Unified Communications Manager to provision the emulator to your IP phones.

Procedure

Step 1 Press **Settings** on your Cisco IP phone.

Step 2 Press ****#**.

A confirmation message at the bottom of the touchscreen says, "Settings Unlocked!"

Step 3 Go to **Network Configuration**. Then, press **Select**.

Step 4 Go to **Alternate TFTP**. Then, press **Yes**.

Tip If **Alternate TFTP** is not an option in the **Network Configuration** menu, contact the administrator for Cisco Unified Communications Manager.

Step 5 Click **Save**.

The IP phone is restarted automatically, so that its configuration changes can take effect.

Step 6 Stop. You have completed this procedure.

Related Topics

- [Workflow to Provision Emulator Service for IP Phones, page 28-3](#)
- [Use the Emulator on an IP Phone or a Mobile Phone, page 28-12](#)

Start the Emulator on an IP Phone

Before You Begin

- Provision the emulator for use on Cisco IP phones.
- Configure emulator settings in *Cisco Cast*.
- Configure your IP phone to emulate the remote control.
- Make note of the generated PIN code in the top-right corner of a DMP display that is showing *Cisco Cast*. The emulator cannot control the corresponding DMP without this PIN.

Procedure

- Step 1** Press **Services** on your Cisco IP phone.
- Step 2** Highlight the remote control option in the services list. Then, press **Select**.
- Step 3** Tap the **PIN** field on your touchscreen.
- Step 4** Use the keypad to enter the PIN code.
- Step 5** Tap **Submit** on the touchscreen.
The touchscreen is refreshed and the emulator starts.
- Step 6** Stop. You have completed this procedure.
-

Related Topics

- [Workflow to Provision Emulator Service for IP Phones, page 28-3](#)

- [Use the Emulator on an IP Phone or a Mobile Phone, page 28-12](#)

Start the Emulator on a Mobile Phone

Before You Begin

- Configure emulator settings in *Cisco Cast*.
- Make note of the generated PIN code in the top-right corner of a DMP display that is showing *Cisco Cast*. The emulator cannot control the corresponding DMP without this PIN.
- This procedure assumes that you are using a supported platform. To learn which mobile phone platforms we support in this release, see our release notes on Cisco.com. An unsupported platform might not be capable of running the emulator.

Procedure

- Step 1** Start the Internet browser on your mobile phone.
- Step 2** Go to the URL that you see on the DMP display that is showing *Cisco Cast*.
You are prompted to enter the PIN.
- Step 3** Enter the PIN. Then, click **Go**.
The emulator starts.
- Step 4** Stop. You have completed this procedure.

Use the Emulator on an IP Phone or a Mobile Phone

Before You Begin

- (When you will use the emulator on an IP phone) Complete the workflow in Cisco Unified Communications Manager to provision the emulator to your IP phones.
- Configure emulator settings in *Cisco Cast*.
- Start the emulator on your phone.

Procedure

- Step 1** Consult DMP remote control documentation on Cisco.com and pay particular attention to sections that describe button behaviors. These descriptions apply equally to the physical unit and its emulator.

Note **The emulator has fewer buttons than the physical remote control has.** You cannot invoke behaviors from the emulator which correspond to any buttons that it does not have.

- Step 2** Stop. You have completed this procedure.
